Investment Managers' Reports

For the financial year ended 31 December 2024

Artificial Intelligence Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned 24.2% in 2024 compared to its global equity benchmark, the MSCI All Country World Net Total Return Index, which returned 17.5% (both figures in dollar terms).

The market remained narrow for much of the year as the Magnificent Seven (up 67.3%) led stocks higher, benefitting from positive earnings revisions and excitement about artificial intelligence (AI), accounting for almost 60% of the S&P 500's return. NVIDIA was again the standout performer, returning 171%, driven by exceptional growth (the forecast for the year to the end of January 2025 sees revenue of 112% year on year (y/y) and GAAP (generally accepted accounting principles) earnings of 144%).

Another characteristic of the year was the US's dominance of global markets. For example, the absence of mega-cap 'AI winners' saw the Dow Jones World ex-US Technology Index return just 14.3% compared to the Dow Jones Global Technology Index's 33.3%. The market also initially embraced a Donald Trump-led Republican government, reflecting expectations of a pro-business and deregulation-focused policy agenda that aligns with market sentiment, as well as the expectation the US would remain at the forefront of AI development, bolstered by a supportive government and a regulatory environment that fosters innovation.

AI continued to be a dominant theme in the market, with further dispersion in performance between the perceived AI winners and losers. In particular, the AI infrastructure build-out continued to accelerate, driving strong performance for select semiconductor, component and networking stocks, as well as stocks exposed to power generation and data centre construction as hyperscalers raced to build out their AI offerings and train ever-larger models. However, in some cases, while AI infrastructure-related demand accelerated through the year, non-AI-related cyclical businesses worsened, with particular weakness in consumer electronics, automotive and other industrial exposure. In some cases, this combined with rising trade restrictions on business with China, which negatively impacted the semiconductor production equipment industry in particular.

Beyond AI infrastructure and the companies we see as enabling continued AI development, we noted a continued divergence in performance between companies perceived as AI winners and losers across all sectors. Corporate adoption of AI accelerated meaningfully in 2024 for the most forward-looking companies as they navigated from proof-of-concept to deployment of the first tools. There was no particular sector or exposure that dominated initial adoption, although we note that companies in heavily regulated sectors such as healthcare and banking have typically lagged other areas including retail, industrials and media where we have seen a wide range of interesting and material case studies that are generating incremental profit growth. Instead, the determining factor has been a company's digital and AI strategy and its willingness to embrace new technologies.

This holds across all sectors we look at. Companies that have been able to showcase AI applications and the first incremental profit generation have continued to benefit from positive multiple reratings.

The top five positive contributors to the Fund's performance relative to the benchmark in the year were NVIDIA, Spotify Technology, Advantest, Walmart and Axon Enterprise. The five largest relative detractors were Harmonic Drive Systems, Schlumberger, VAT Group, Broadcom and Hoya.

Market Review

The MSCI All Country World Net Total Return Index gained 17% while the S&P 500 Index returned 25% (both figures in dollar terms). The strength of the US equity market reflected stronger than expected economic growth while the Federal Reserve (Fed) pivoted to an interest rate easing cycle, enabled by moderating inflation and resilient employment data. While the US dominated, Asia delivered solid returns (MSCI All Country Asia ex Japan Index up 19%) with Europe (Eurostoxx 600 2%) and Japan (TOPIX 8%) trailing. US large-cap stocks continued to dominate with the Russell 1000 (large cap) Index returning 25% compared to the Russell 2000 (small cap) Index return of 11%.

Volatility saw a pronounced move up in August following weak US labour market data and significant yen strength after the Bank of Japan (BoJ) hiked its policy rate by 0.25% and announced plans to halve its purchases of Japanese government bonds. This prompted a sharp unwind of the yen carry trade (where investors borrow 'cheaply' in yen – as Japanese interest rates are lower – to buy other assets/currencies) and a market correction. The magnitude of the correction was unusual: the VIX Index (a measure of volatility) touched 60, its third highest level in recent history after Covid (2020) and the global financial crisis (2008). However, developed markets rebounded sharply on the back of renewed confidence in US economic resilience and coordinated actions from Japan's government and central bank.

The labour market continued to cool during the period with the July jobs report sending a recessionary warning signal by triggering the Sahm Rule (when the three-month moving average unemployment rate increases 50 basis points (bps) from its lowest point during the previous 12 months). However, the unemployment rate ticked lower in subsequent jobs reports while Treasury yields fell and financial conditions loosened in anticipation of the start of the Fed's interest rate-cutting cycle. This started with a -50bps cut at its September meeting, which marked a near-term low as yields moved sharply higher as Trump's election prospects improved and concerns around the fiscal deficit (whichever candidate prevailed) intensified.

Artificial Intelligence Fund continued

Market Review continued

Trump's decisive victory alleviated political uncertainty and prompted the biggest ever post-election rally. The Republican clean sweep further buoyed sentiment, increasing expectations for pro-business policies (deregulation; lower taxes) that should hopefully offset potential negative effects from tariffs. As the major macroeconomic and political risks dissipated over the year, equity multiples expanded and credit spreads tightened.

Unfortunately, the post-election rally lost steam in December due to worries that some of the President-elect's policies, such as tariffs, may prove inflationary. While the Fed cut the federal funds rate at the December meeting as anticipated it was accompanied by more hawkish projections for the path of interest rates and inflation, in part due to potential policies from the incoming administration.

Fund Activity

Some of our new positions during the year included Cloudflare, Nova Measuring, Lotes, Amphenol, Axon Enterprise, TDK, Criteo, MACOM Technology Solutions, Tesco, Oxford Nanopore Technologies, Ecolab, Springer Nature, Prysmian, Argan, GE Vernova, Corning, SK Hynix, American Express, Caterpillar, Coherent, CH Robinson Worldwide, MediaTek, AppLovin, GoDaddy and Doximity.

Some of the positions we exited during the year included Epiroc, Baker Hughes, Zuken, Emerson Electric, Rockwell Automation, Keyence, Minebea, Snowflake, Samsung Electronics, GMO Payment Gateway, Qualcomm, CrowdStrike, Cognex, Compagnie Financiere Richemont, S&P Global, Advanced Micro Devices, Shima Seiki Manufacturing, Mongo DB and Schlumberger.

Market Outlook

We remain very excited about the potential for AI in the year ahead as it becomes widely appreciated that it is the next general purpose technology with the potential to transform whole swathes of the global economy. The pace of development continues to accelerate, as demonstrated by the mid-December debut of another new frontier model from OpenAI, o3, that put up remarkable performance across a range of benchmarks. January saw a number of significant and exciting AI announcements that also brought market volatility as investors digested the various implications. The most notable was the release of DeepSeek's R1 model which drew significant attention given the showcasing of performance compared to OpenAI's GPT-4o while claiming significantly lower inference costs and allegedly much lower training costs of only \$6m.

Critical R1 details such as the hardware used for training and distillation model sources (likely OpenAI's GPT-4/Meta's Llama) remain undisclosed and research provider SemiAnalysis has suggested that the \$6m is a 'very narrow portion of the total cost' and should be seen in the context of >\$500m in overall GPU (graphics processing units) investments, \$1.3bn in total server capex and >\$700m in operational costs. The \$6m number also excludes the significant 'costs associated with prior research' DeepSeek have made to reach this point (which they themselves recognised).

Despite the lack of comparability on the training cost figure and the fact that R1 is text only, rather than the truly multi-modal kind of model many assume will lead us towards AGI (artificial general intelligence), DeepSeek has introduced noteworthy technological advancements. Innovations in both pre-training and inference, especially in terms of the efficiency of NVIDIA GPU and memory usage, are impressive. DeepSeek also used a reinforcement learning-only approach for post-training (i.e. no human feedback or supervised fine-tuning).

The correction in stocks exposed to AI infrastructure was severe in part due to these advancements and some of the questions raised, but also due to the recent share price strength in many areas. It should be noted that the collapsing cost of inference is not a new dynamic and indeed is a key characteristic of technology progress. The cost of inference (measured in dollars per million tokens) had fallen 20x pre-DeepSeek. Indeed, the open-source nature of the Llama models on which DeepSeek was built is intended to create these types of innovation at the trailing edge, refining and advancing the leading-edge work.

A falling cost of inference benefits both the continued scaling of AI, through cheaper test time compute, and a lower cost input when running AI inference and implementing it within applications. While in the short term cost is just one consideration in a company's adoption of AI, we believe that a lower cost of inferencing ultimately acts as a significant tailwind to both future AI development and the democratisation and widespread adoption of AI at a corporate level.

The Stargate Project announcement of \$500bn investment into AI infrastructure for OpenAI in the US was overshadowed by the subsequent DeepSeek news. However combined with the extension of Stargate's OpenAI and SoftBank's creation of a JV focused on enterprise and corporate AI in Japan, plus China's own \$137bn investment into its AI efforts, it is clear that the appetite to spend on AI development remains undimmed. OpenAI, xAI and Meta are all expected to unveil their next-generation frontier models in the coming months and we are excited about the progress that may be showcased.

We did not make sweeping changes to the portfolio as a result of the DeepSeek announcement, though we have reduced our exposure to NVIDIA directly and modestly reduced our exposure to power-related infrastructure. We also reduced Micron Technology as DeepSeek's approach reduced the usage of high bandwidth memory (HBM). Whether these optimisations are ultimately portable to other chip architectures and compute stacks, and whether they can be adopted by the hyperscalers more broadly remains to be seen, but for now we have taken prudent steps to reduce point risks.

The Fund has also rotated towards AI beneficiaries as a lower inference cost should bring benefits to the whole ecosystem, including a lower cost input when embedding AI in applications and using AI within existing businesses. In our view, there are still very good reasons to think we will continue to see aggressive investment in AI infrastructure as key players chase AGI. Ultimately, the ability to dynamically allocate between the enabling infrastructure and the downstream beneficiaries has, in our view, long been one of the key differentiations in our investment approach.

Our macroeconomic view has not changed significantly recently despite numerous shocks caused by tariff-related headlines. We acknowledge that US policy remains uncertain and we would expect further surprises as US economic and foreign policy continues to take shape. However, the US consumer remains in good health with robust spending and the Trump administration's aim to push through a deregulatory and pro-business agenda remains a tailwind for SMB (small and medium-sized business) confidence.

We are excited to see many future developments in AI that our current accelerated rate of progress will undoubtedly bring and we also expect these to bring debate in the way DeepSeek has. We believe the DeepSeek announcement does not herald a significant change in direction or long-term strategy for AI and that the advances showcased are a significant positive for the AI ecosystem over the longer term. We continue to expect strong investment in the AI infrastructure to drive innovation of the next-generation models and undoubtedly further innovations and developments as we progress through what we believe are still firmly the early stages of the emergence of AI as a general-purpose technology.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Asian Stars Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned 12.8% in 2024, compared to 12% from its benchmark, the MSCI Asia ex Japan Net Total Return Index (both figures in dollar terms).

Looking beyond the Magnificent Seven, a 12.8% absolute return was a good performance in what turned out to be a difficult year given a huge amount of political risk and geopolitical tensions as well as sticky inflation. According to Lipper, this puts the Fund in the top quartile of funds in its peer group over the past year and top decile since inception on 31 December 2018.

Our outperformance was primarily driven by positive stock selection, though our asset allocation effect was also positive.

From a country perspective, we outperformed in India and Taiwan, driven by a strong selection effect. We see these two as rich hunting grounds for us. We also did well generally in the ASEAN (Association of South-east Asian Nations) region.

On the negative side were China and South Korea, which damaged our relative performance in the year.

Market Review

2024 was very US-driven in terms of setting the narrative for the market, with emerging Asian markets acting as a kind of derivative to events there. This was frustrating for us as we believe fundamentals justified higher valuation levels.

The US monetary cycle remained a key issue throughout the year, with inflation falling slower than expected, though we did see rate cuts by the Federal Reserve (Fed). AI was another hot topic, where we managed to capture returns in Asia given key companies there are part of the US technology value chain.

The biggest event of the year for all emerging markets was the US election, with Donald Trump and the Republican Party winning a clean sweep of the White House and Congress. This was not necessarily an ideal outcome for us as investors given policy uncertainty, increased risk premiums and crony-capitalism seldom lead to a good long-term outcome. The main direct impact for Asian markets will most likely be the impact of Trump's tariffs. We believe most key emerging market economies and companies have been preparing for Trump 2.0 and a great deal of the potential risk is already priced in by the market. We feel the downside is relatively limited from a risk perspective, unless we see a particularly extreme outcome from his policies.

Perhaps surprisingly, China turned out to be one of the best performing emerging market countries during 2024 after three years of significant underperformance. In our view, this was driven by a combination of a cheap equity market that priced in poor Chinese economic growth and, in late September, President Xi stepping up and effectively giving the economy and its stock market a helping hand which set off a huge rally in the market.

Fund Activity

The Fund's main aim during the year was to optimise its technology exposure and to take advantage of the new growth opportunities on the back of the AI developments. We also made smaller changes to its India positions, reflecting the new growth opportunities there, while at the same time trying to navigate what we see as relatively high valuations.

The announcement of Chinese economic stimulus measures led us in late September to reduce our underweight in China, though we remain underweight relative to our benchmark.

Market Outlook

We maintain a constructive outlook for the Fund and believe we are holding a portfolio of strong, high-quality companies that are very attractive relative to their fundamentals. We also believe many of our portfolio holdings have been hit unjustifiably hard by panic around the stickiness of inflation and geopolitics.

Asia in particular offers significant growth opportunities and is the most dynamic region in the world from an economic perspective. We are still finding very attractive opportunities here to deploy capital into attractive 'Star' companies that we believe will continue to give us responsible returns in the years to come.

Emerging Markets and Asia Team

Polar Capital LLP

January 2025

Biotechnology Fund

Fund Performance

The Fund (Class I US Dollar Distribution Shares) returned +7.7% for the year, significantly ahead of the Nasdaq Biotechnology Net Total Return Index's 0.8% loss (all figures in dollar terms).

The pattern of absolute and relative performance of the biotechnology sector versus the broader market seen in 2023 continued in 2024, with biotechnology underperforming the S&P 500 Total Return Index which returned +25.0%. The year was marked by strong performance from the major equity indices, as continued tight macroeconomic conditions, an emerging 'higher for longer' narrative on the path of interest rates set by the Federal Reserve (Fed), as well as simmering geopolitical discomfort and a congested global election calendar all conspired to encourage investors to continue defaulting to the easy approach of joining in with passive and algorithm-fuelled momentum and chasing recent winners – namely anything AI, obesity or technology-related. As the year developed, consistent passive outflows from healthcare as an asset class, anticipation of awkward political rhetoric ahead of and in the wake of the US presidential election, as well as behind the scenes US Treasury yields creeping higher, all contributed to keeping investor appetite for the biotechnology sector suppressed. The Fund's performance is perhaps a testament to the real fundamental value that successful innovation can create even in the face of multiple headwinds for the asset class.

Market Review

While 2024 started solidly for biotechnology on high expectations of further M&A activity after the rash of deals in late 2023, a relatively muted JP Morgan Healthcare Conference in San Francisco in mid-January saw – despite the best efforts of the sell-side investment research community – the hype and hope fading against a wobbly macroeconomic background in which the broader equity market, and subsequently the Fed itself, began gently backing away from recent expectations for earlier and repeated cuts to interest rates. While an early-year pickup in financing activity hinted at perhaps more appetite for risk, we still sensed guarded optimism for the sector's short-term prospects. The broader market's ongoing obsession with 'mega-total addressable market (TAM)' themes of AI (artificial intelligence) and obesity, as well as in chasing the next rumoured M&A (merger & acquisition) target, continued to be a source of frustration for many dedicated specialists.

February was a strange month for the biotechnology sector. While institutional capital continued to cautiously feel its way through a marginally softening macroeconomic outlook, with inflation still looking sticky and expectations for the first Fed rate cut being pushed back out again to June, individual stock action within the sector can best be described as like popcorn being heated over a stove.

A number of names, typically small-cap firms, surged higher, sometimes on the back of generously sized recapitalisation by dedicated specialists, sometimes on the back of clinical data updates and sometimes randomly. It certainly felt like much of the action was to cover short investments, but it was also energised by renewed retail involvement in AI and obesity 'mega-TAM/disruption' thematic box-ticking stories. While the pace of refinancings picked up for smaller companies, there was a growing sense among the specialist investment community that some investors were starting to be given privileged access to information on R&D progress in the context of those financings. While this sat uncomfortably with us and others, it certainly also seemed to drive a degree of both fear and mystery of missing out behaviour in the sector.

As expected after the wild start to the year with respect to financing activity and news flow around companies playing into the obesity theme, March saw more muted absolute and relative performance for the sector. News flow on clinical development and regulatory change was more mixed during the month, though the overriding influencer of performance was probably mounting investor uncertainty developing around the path of rate cuts by the Fed over the remainder of the year. Within the Fund, the predominant theme was early-year performers giving back a good proportion of their outsized year-to-date gains. Our sense was that while investor interest and engagement in the broader biotechnology sector remained relatively elevated, in the wake of a record period of refinancing activity since the start of the year, seasonality continuing to be set against the sector through April and continued moderation in expectations for the path of rate cuts, we were not expecting to be surprised by another more muted few weeks for absolute and relative performance for the sector.

Indeed, the rollover in risk sentiment in March deepened in April as investors continued to wrestle with a 'higher for longer' scenario in the Fed's interest rate policy. Broader markets also weakened on economic data suggesting US consumer spending was slowing, which in conjunction with a still sticky inflation picture had investors contemplating a period of stagflation ahead. With earnings season getting started and mixed reports from among the 'Magnificent Seven' (Apple, Microsoft, Alphabet, Amazon, NVIDIA, Meta Platforms and Tesla), the big picture theme was softening risk appetite and a marginal shift in appetite toward more defensive sectors.

For the Fund, April continued March's more muted tone with the predominant theme again being early-year performers giving back a good proportion of their outsized gains. At the end of the month, portfolio holding Deciphera Pharmaceuticals announced its acquisition by Japanese pharmaceutical company Ono for \$2.4bn.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Biotechnology Fund continued

Market Review continued

May saw the broader equity market continue to grind higher with the biotechnology sector managing to keep pace. Yet despite the more positive headline performance, beneath the surface May was a frustrating month for dedicated biotechnology investors. The combined effect of de-grossing activity from the long/short hedge fund community, where quality long positions are sold down to buy back shorts (with the latter moving higher), along with renewed retail interest in the vaccine names on the back of bird flu headlines, quickly all-but-erased the accumulated absolute and relative performance of many dedicated funds year-to-date, including our own. The rollercoaster start to the year that by May had morphed into an almost impossible environment for specialists to add value, left many dedicated biotechnology investors again somewhat despondent.

Like the previous month, June saw the broader equity market continue to grind higher with the biotechnology sector just about managing to keep pace. However, unlike the previous month, June saw some kind of rationality return to the sector with respect to price action across companies. The de-grossing activity of May that so frustrated dedicated specialists seemed to abate somewhat and at the margin asset price action began to normalise. These marginally improved background conditions, along with some materially positive fundamental news flow for several higher profile companies in the sector – Insmed, Alnylam Pharmaceuticals, Sarepta Therapeutics and in particular two of the Fund's significant active holdings, Argenx and Zealand Pharma – saw the Fund recover some relative performance versus the benchmark.

Despite the positive headline figures for various broader market and sector-specific benchmarks, things started getting much trickier for equity investors in July with high levels of volatility and some violent share price moves in individual names. Extended valuations, extreme crowding and awkward positioning seemed finally to have become an issue for a perhaps overly complacent, momentum-driven and narrow equity market. While the Magnificent Seven suffered most visibly, within healthcare the start of the second quarter earnings season saw crowded positioning in consensus long and short trades, even among the largest capitalisation names, punished mercilessly.

August was marked by extreme volatility in the broader equity market at the start of the month caused by a violent unwind of the yen carry trade that involved volatility across equity markets in Asia, a reversal of performance in global stocks characterised or perceived as (positive) momentum trades and growing discomfort about crowded positioning in popular thematic trades such as AI and obesity. The volatility was no doubt exacerbated by seasonally lower cash equity trading volumes and the volatility soon subsided, with major indices recovering early month losses and even ending the month higher. However, it felt like the episode had left investors nervous, even as we approached the much anticipated first cut in interest rates by the Fed. The continued upward momentum of broader indices disguised a significant rotation of relative performance beneath the surface.

Biotechnology had a difficult September which we attributed to a combination of seasonality with mutual funds engaging in year-end and tax-loss selling; the Fed's first interest rate cut in September being pre-traded (bought) through July and August; growing expectations of a probable 'soft' economic landing; and continued crowded positioning and capricious trading among long/short hedge funds around news flow events. The nascent re-engagement of more generalist investors in biotechnology that we had started to detect in August seemed already to dissipate again, continuing the on/off theme of the year. The investor interest that was beginning to spill down to mid-sized commercial stage and late clinical-development stage names seemed to stall in the wake of tricky developments for some of the larger biotechnology names that were previously seen as easy/clean defensive growth stories. While the IPO (initial public offering) window for biotechnology creaked open marginally in September, the market remained discerning and highly selective.

The sector's performance the previous month made us wary of a degree of capitulation in October, traditionally one of the more difficult months for absolute and relative performance by the sector and indeed it came to pass. A solid few days early in the month soon dissipated with US Treasury yields continuing to melt higher as presidential elections odds started to point towards a Trump victory with perhaps even a strong Republican majority. In addition, continued solid economic data removed the need for investors to contemplate the traditionally defensive healthcare sector, though in fairness a difficult earnings season for a number of the well-owned larger-capitalisation companies across different parts of the sector did nothing to help healthcare's cause. As the month continued with the election in early November looming, there was a feeling of de-grossing activity and a preference for liquidity as investors looked to reduce risk into the result.

In early November, the much-anticipated election came and went. With betting markets in the weeks ahead increasingly forecasting a Trump victory, the eventual outcome was less of a surprise than previously, although the magnitude of the victory, especially with the Republicans taking control of Congress, had equity markets briefly scrambling for appropriate pro-cyclical macroeconomic positioning in the aftermath. While investors initially took the result to be at the margin a more constructive outcome for the domestic-leaning healthcare industry (relatively insulated as it is from potential headwinds created from expected higher inflation, trade tariffs and a stronger dollar) the nascent improvement in sentiment was short-lived as Trump named Robert F Kennedy (RFK) Jr as his pick for Secretary of the Department of Healthcare and Human Services (HHS), the government department responsible for the provision and regulation of healthcare products and services delivery in the US.

This widely-perceived unconventional, unconstructive and hugely controversial choice to oversee one of the most complicated areas of government administration drove a violent selloff for pharmaceutical and biotechnology stocks in the middle of November. This was largely due to RFK Jr's views on the safety and efficacy of vaccines as a population health protection and maintenance tool, the appropriateness of the government funding the use of weight loss drugs and the independence and utility of the Food and Drug Administration in overseeing the nation's nutritional and medicinal requirements. While further proposed appointments beneath RFK Jr to the various subdivisions responsible for healthcare were more constructive and to a degree settled nerves, investors remained wary (perhaps weary) of the incoming administration's disruptive inclinations, competence and abilities when it comes to healthcare, even though radical reform itself does not appear to be a high priority.

The risk-on rally in broader equity markets following the election ran out of steam in December. This was perhaps due as much to simple profit-taking after another exceptionally strong year of double-digit returns as it was to the complicated mixture of re-emerging doubts and concerns about the outsized performance of Big Tech, macroeconomic prospects for the year ahead, the Fed messaging caution on expectations for further interest rate cuts in the near term and fresh reminders of the myriad of simmering geopolitical antagonisms and strategic overhangs. Within this picture, biotechnology inevitably struggled, though some negative clinical development news flow and a notable lack of M&A activity did little to help attract interest. With sector leaders Vertex Pharmaceuticals and Novo Nordisk failing to meet investor expectations with their much anticipated but ultimately disappointing respective clinical trial updates late in the year, weary dedicated investors closed their books for the year with an air of despondency after another frustrating year for the sector.

Fund Activity

The Fund (Class I US Dollar Distribution Shares) outperformed the benchmark by 8.5% over the year. It started 2024 firmly in 'risk on' mode with more aggressive positioning in late clinical development stage and revenue growth-stage stories, a situation largely inherited from the strong absolute and relative performance of these segments in late 2023. This contributed to strong performance early in the year, but with the start of de-grossing activity from the long/short community in March lasting through to the end of May, the positioning turned into a significant headwind for performance. As a result, the Fund's solid early-year absolute and relative performance reversed over the corresponding period, although it recovered somewhat in June with continued follow-through recovery throughout July. Absolute and relative performance struggled again in the third quarter as broader market volatility in early August and crowded positioning among the dedicated community made for tough investing.

Although volatility returned in mid-November following the presidential election, the quality of the Fund's portfolio finally came through with the relative outperformance of early 2024 re-establishing itself into the end of the year.

Fundamental news flow for the Fund was very positive over the period with multiple materially positive clinical and regulatory updates, perhaps most notably: Argenx (US Food and Drug Administration approval for a new use for its medicine Vyvgart); Zealand Pharma (compelling data on a potentially attractive new medicine for obesity); Alnylam Pharmaceuticals (a positive clinical trial readout for its cardiovascular medicine); Insmed (a positive clinical trial readout for its drug candidate for the lung condition bronchiectasis); Blueprint Medicines (strong launch for its first medicine Ayvakit); UCB (strong commercial launch of its new medicine Bimzelx in dermatology); Celldex Therapeutics (strong clinical data for its new drug candidate for urticaria); Arcutis Biotherapeutics (a notable inflection in prescriptions written for its dermatology medicine franchise); Merus (breakthrough new medicine for head and neck cancer); Mirum Pharmaceuticals (new medicine for cholestatic liver disorders); and Scholar Rock Holding (breakthrough clinical trial results for a potential new therapy for spinal muscular atrophy). In terms of setbacks, perhaps the largest disappointment came from giving up on and exiting the spatial biology stories Nanostring Technologies and Akoya Biosciences – despite being great research tools, the market seemed unable to become excited by the opportunity of spatial biology. Elsewhere, investors lost confidence in the potential of Cabaletta Bio's cell therapy efforts in autoimmune disease while Evotec's woes mounted with a string of governance and operational setbacks.

The Fund benefited from three acquisitions in the period. At the end of April Deciphera Pharmaceuticals announced its acquisition by Japanese pharmaceutical company Ono for \$2.4bn; in late May, Calliditas Therapeutics, a Swedish biotechnology company in the field of kidney disease, which recently launched a product that is steadily becoming a standard of care, announced its acquisition by Japanese company Asahi Kasei for \$1.1bn; and in October, Longboard Pharmaceuticals announced its acquisition by the Danish neuroscience specialist Lundbeck for \$2.6bn. Proceeds from these acquisitions were generally recycled into existing investments. In terms of positioning, the Fund's strategic focus remained consistent over the year with emphasis on commercial-stage revenue growth and later-stage clinical development stories, and importantly in the latter a focus on companies with strong clinical data and balance sheets providing a viable independent path to commercialisation in the near term. The combination of a perhaps unprecedented period of positive clinical and regulatory news flow, as well as continued M&A activity for the Fund's portfolio (48 investments have now been acquired since the Fund's inception in late 2013), served as a helpful reminder that despite the tricky trading environment the Fund continues to benefit from being invested in innovative and well-managed companies. Active share versus the benchmark ended the period at 70%.

Biotechnology Fund continued

Market Outlook

With equity markets feeling heavy at the start of the new calendar year, a recent spate of higher profile clinical trial disappointments and patience running thin on M&A activity, at the time of writing, the biotechnology sector feels somewhat listless and lethargic. With the political process involved in the new US administration settling in over the coming weeks and the Fed leaving its options open for the path of interest rates pending policy moves from the incoming administration, we continue to expect the sector to be tricky and unpredictable to navigate in the near term. We expect the soap opera involved in Congress approving Donald Trump's nominations for the various healthcare positions to take up much of the first few months of 2025. While we expect there to be surprises along the way, we remain of the view that the potential fundamental impact on the healthcare industry is likely to be relatively modest, certainly less than the noise created by incoming individuals involved would suggest and perhaps less than the fears of investors as expressed by the price action in November and December.

We expect investor interest in the biotechnology sector at the start of the new year to be somewhat measured, pending the removal of policy overhangs, as well as due to the perhaps inevitable rush for companies to raise capital following the annual JP Morgan Healthcare Conference in mid-January soaking up what fresh capital is available. However, with the cadence of positive fundamental news flow last year underpinning the real value building in the industry, involving multiple new emerging leaders with attractive quality growth characteristics, if macroeconomic conditions shift and if investor appetite for pouring capital into the current equity market favourites starts to wobble, the sector could be in a prime position to deliver meaningfully better performance in 2025.

We note that 50 new medicines were approved by the FDA in 2024, which is clear evidence that the basic building blocks of fundamental value creation for the industry continue to be put in place at a robust pace. As we start the new year, we remain excited about deploying investment capital behind the best people using the best technologies to develop the best new medicines to address the major challenges and opportunities of modern medicine.

January 2025

China Stars Fund

Fund Performance

In 2024, the MSCI China All Shares Net Total Return Index increased by 16.4% and the Fund (Class I US Dollar Accumulation Shares) returned 13.7% (both figures in dollar terms).

After a rare and painful three consecutive years of negative returns, Chinese equities finally had a decent year of double-digit returns. The policy pivot in late September 2024 was a critical turning point for capital markets. It signalled not only the willingness to provide a backstop to the dangerous downward spiral in the economy, but also the importance of capital markets in the policymaker's long-term agenda, both as a means to boost consumer and business confidence but also an alternative to the property market as households' store of wealth.

From a relative performance perspective, the Fund's underweight in financials and stock selection within industrials were the two biggest contributors to the year's modest underperformance. At the stocks level, the top contributors to relative performance in 2024 were TSMC, Meituan Dianping and China Merchants Bank; the biggest detractors were Hefei Meiya Optoelectronic Technology (Meiya), Shenzhen Inovance Technology and Pinduoduo/PDD.

TSMC, the world's foremost manufacturer of leading-edge semiconductors, was a key beneficiary of the continued enthusiasm and explosive growth in artificial intelligence. With the demise of Intel and decline of Samsung as competitors, TSMC's competitive industry positioning is stronger than ever.

Meituan Dianping, the dominant consumer services e-commerce platform, staged a strong rebound as the management team refocused on profitability and returns on investments, helped by receding competitive pressure from TikTok's foray into market services. We took some profit after a strong surge in October.

China Merchants Bank, in our opinion China's best-run banking and wealth management franchise, surged as investors looking for yield bid up prices for high-yielding bank stocks while stimulus eased concerns on balance sheets.

Meiya, a well-managed industrial equipment company with global leadership in agriculture colour sorters and growth optionality in dental equipment, derated significantly as growth in dental equipment disappointed as clinics scaled back their capital expenditure. We continue to like Meiya's stable cash-generative business in agriculture equipment. At an almost 5% dividend yield, the stock offers great value. We took advantage of the drawdown and added to our holding, which is now the Fund's largest stock position.

PDD, an emerging leader in e-commerce both in China and globally, had a volatile year after being a star performer in 2023. The company benefits from consumers in China looking for better value for money in a weak economic environment and is taking a significant amount of market share. PDD's international business, Temu, is gaining very strong traction in the US and Europe but, given its regulatory and geopolitical risk in the short term, we trimmed our position size.

Market Review

Chinese equities finally staged a decent rebound after three years of downturn. The MSCI China All Shares' 12-month forward earnings multiple expanded from 9.8x at the beginning of the year to 11x as the year ended, a 12% expansion compared to the total index return of 16%. This rerating was primarily driven by the clear signal of a policy pivot at the end of September.

Fund Activity

During Q4 2024, there were two notable changes.

We initiated a position in Sunresin New Materials, a leader in special chemicals for varied end markets including lithium mining, water treatment and the manufacture of GLP1 (Glucagon-like peptide-1), a medication used to treat diabetes and obesity.

We exited our investment in Binjiang Service Group. Its excellent management team has added a significant amount of value for its shareholders since our initial investment in January 2020. We see better opportunities elsewhere in the current market environment and wish the company every success in the future.

Market Outlook

Donald Trump's re-election brings the trade war narrative back to the forefront of many investors' minds. 2025 in China is likely to be a tug-of-war between domestic policy stimulus and trade which will bring plenty of good investment opportunities that may come with some manageable volatility. In our opinion, how policymakers apply stimulus policy tools to boost consumer confidence to fight deflationary pressures and respond to the trade war and its impact on export growth is the critical driver of equity market returns in China.

The policy pivot at the end of September is a critical turning point, signalling that, at long last, policymakers acknowledge the long-term damage of the deflationary pressure and poor consumer confidence and shows its willingness to fight. In essence, this put a floor under economic growth and asset prices. What remains to be seen is whether the policy goal is to merely arrest the downturn or to get the economic engine humming again.

China Stars Fund continued

Market Outlook continued

A trade war would undoubtedly put pressure on external demand growth, but it could also serve as a much-needed final kick that policymakers need to bolster reflationary stimulus policies, which in our opinion is a more important driver for asset prices in China.

At the stock level, our portfolio is anchored around three key themes: domestic consumption recovery, structural winners in high-end manufacturing and Chinese multinationals going global. We are constructive on these cheaply valued, high-quality, structural growth companies in China heading into 2025.

Thank you for keeping your eyes on the horizon.

January 2025

Emerging Market ex-China Stars Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned 3% in 2024, compared to 3.6% from its benchmark, the MSCI Emerging Markets ex China Net Total Return Index (both figures in dollar terms).

From a country perspective, we saw strong performance from India and Singapore, with the former a particularly rich hunting ground for us. On the negative side were the likes of Indonesia, Argentina and South Korea, which was hard on our relative performance for the year.

Market Review

2024 was a year where politics took centre stage, which was to be expected given the huge number of general elections. Even though the Fund has an ex-China mandate, China's economics, politics and trade have a huge impact on other emerging markets, both directly and indirectly. There was, of course, no election in China but the policy direction that President Xi set up also moved markets and, in our mind, many of the problems that China is now faced with are self-inflicted.

This year was very US-driven in terms of setting the narrative for the market with emerging markets acting as a kind of derivative to events there. This was frustrating for us as we believe fundamentals justified higher valuation levels.

The US monetary cycle remained a key issue throughout the year, with inflation falling slower than expected, though we did see rate cuts by the Federal Reserve (Fed). AI was another hot topic, where we managed to capture returns in Asia given key companies there are part of the US technology value chain.

The biggest event of the year for emerging markets was the US election, with Donald Trump and the Republican Party winning a clean sweep of the White House and Congress. This was not necessarily an ideal outcome for us as investors given policy uncertainty, increased risk premiums and crony-capitalism seldom lead to a good long-term outcome. The main direct impact for emerging markets will most likely be the impact of Trump's tariffs. We believe most key emerging market economies and companies have been preparing for Trump 2.0 and a great deal of the potential risk is already priced in by the market. We feel the downside is relatively limited from a risk perspective, unless we see a particularly extreme outcome from his policies.

The Middle East performed well despite the conflict between Israel and Gaza and Lebanon. The UAE and Saudi Arabia were relative safe havens.

Latin America as a whole had a tough time. Brazil was hit by 'Lula risk' (President Luiz Inácio Lula da Silva) as well as finding it hard to deal with the strong US dollar. Brazil was particularly weak, as was Mexico, driven by both domestic politics and risks from Trump around trade. Claudia Sheinbaum was elected Mexico's President and is now in a position to make constitutional changes. Markets are expecting noise around Trump, tariffs and how else he will deal with Mexico when it comes to trade.

Fund Activity

The Fund's main aim during the year was to optimise its technology exposure and to take advantage of the new growth opportunities on the back of the AI developments. We also made smaller changes to its India positions, reflecting the new growth opportunities there, while at the same time trying to navigate what we see as relatively high valuations.

Market Outlook

We maintain a constructive outlook for the Fund and believe we are holding a portfolio of strong, high-quality companies that are very attractive relative to their fundamentals. We also believe many of our portfolio holdings have been hit unjustifiably hard by panic around the stickiness of inflation and geopolitics.

Asia in particular offers significant growth opportunities and is the most dynamic region in the world from an economic perspective. We are still finding very attractive opportunities here to deploy capital into attractive 'Star' companies that we believe will continue to give us responsible returns in the years to come.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Emerging Market Stars Fund

Fund Performance

2024 was a year where politics took centre stage, which was to be expected given the huge number of general elections. There was, of course, no election in China but the policy direction that President Xi set up also moved markets and, in our mind, many of the problems that China is now faced with are self-inflicted.

The Fund (Class I US Dollar Accumulation Shares) returned 7.6%, compared to 7.5% from its benchmark, the MSCI Emerging Markets Net Total Return Index (both figures in dollar terms). This puts the Fund outside the top quartile of funds in our peer group over the year by around one percentage point, according to Lipper. Looking at this data, we performed well against most of our core 'growth and quality' peers. Since inception on 29 June 2018, the Fund is in the top decile of the peer group, according to Lipper.

From a country perspective, we saw strong performance from India and Taiwan, driven by a strong selection effect. We see these two as rich hunting grounds for us. We also did well generally in the ASEAN (Association of South-east Asian Nations) region.

On the negative side were China and South Korea, which was hard on our relative performance over the year.

Market Review

2024 was very US-driven in terms of setting the narrative for the market, with emerging markets acting as a kind of derivative to events. This was frustrating for us as we believe fundamentals justified higher valuation levels.

The US monetary cycle remained a key issue throughout the year with inflation falling slower than expected, though we did see rate cuts by the Federal Reserve (Fed). AI was another hot topic, where we managed to capture returns in Asia given key companies there are part of the US technology value chain.

The biggest event of the year for emerging markets was the US election, with Donald Trump and the Republican Party winning a clean sweep of the White House and Congress. This was not necessarily an ideal outcome for us as investors given policy uncertainty, increased risk premiums and crony-capitalism seldom lead to a good long-term outcome. The main direct impact for emerging markets will most likely be the impact of Trump's tariffs. We believe most key emerging market economies and companies have been preparing for Trump 2.0 and a great deal of the potential risk is already priced in by the market. We feel the downside is relatively limited from a risk perspective, unless we see an extreme outcome from his policies.

Perhaps surprisingly, China turned out to be one of the best performing emerging market countries during 2024 after three years of significant underperformance. In our view, this was driven by a combination of a cheap equity market that priced in poor Chinese economic growth and then, in late September, President Xi stepping up and effectively giving the economy and its stock market a helping hand which set off a huge rally in the market.

The Middle East performed well despite the conflict between Israel and Gaza and Lebanon. The UAE and Saudi Arabia were seen as relative safe havens.

Latin America as a whole had a tough time. Brazil was hit by 'Lula risk' (President Luiz Inácio Lula da Silva) as well as finding it hard to deal with the strong US dollar. Brazil was particularly weak, as was Mexico, driven by both domestic politics and risks from Trump around trade. Claudia Sheinbaum was elected Mexico's President and is now in a position to make constitutional changes. Markets are now expecting noise around Trump, tariffs and how else he will deal with Mexico when it comes to trade.

Fund Activity

The Fund's main aim during the year was to optimise its technology exposure and to take advantage of the new growth opportunities on the back of the AI developments. We also made smaller changes to its India positions, reflecting the new growth opportunities there, while at the same time trying to navigate what we see as relatively high valuations.

The announcement of Chinese economic stimulus measures led us in late September to reduce our underweight in China though we remain underweight relative to our benchmark.

Market Outlook

We maintain a constructive outlook for the Fund and believe we are holding a portfolio of strong, high-quality companies that are very attractive relative to their fundamentals. We also believe many of our portfolio holdings have been hit unjustifiably hard by panic around the stickiness of inflation and geopolitics.

We believe that Asia, in particular, offers significant growth opportunities and is the most dynamic region in the world from an economic perspective. We are still finding very attractive opportunities here to deploy capital into attractive 'Star' companies that we believe will continue to give us responsible returns in the years to come.

January 2025

Emerging Markets Healthcare Fund

Fund Performance

The Fund launched on 31 May 2024 and this report covers the period from then to 31 December 2024.

Since inception to the end of 2024, the Fund (Class I USD Accumulation Shares) returned 5.2% versus its benchmark, the MSCI Emerging Markets Health Care Net Total Return Index, which returned 11.5%. Global equities, as measured by the MSCI World Net Total Return Index, returned 8.4% over the same period, while the MSCI Emerging Markets Net Total Return Index delivered 4.0% (all figures in dollar terms).

Emerging markets were generally driven by macro factors such as dollar sensitivity and geopolitics as well as by healthcare-specific factors. Emerging markets healthcare performance reflected multiple inputs: stickier US inflation and interest rates in the US remaining higher for longer; China's deepening economic woes seated in an underperforming property market, poor consumption levels by historical standards, anti-corruption purges and geopolitical mistrust from a more wary global trading audience, balanced against positive effects from proposed stimulus measures; fears relating to the potential Biosecure Act; a shock general election result in India; persistent inflation and high interest rates in Brazil pressuring profits; and a declaration of martial law in South Korea. With the benchmark's top three countries – India, China (including Hong Kong) and South Korea – accounting for 80% of the index, we experienced huge swings in intra- and inter-month volatility.

On a subsector basis healthcare services, healthcare equipment and managed healthcare delivered negative contributions whereas life sciences tools and services, biotechnology and pharmaceuticals delivered the strongest returns, followed by healthcare suppliers and healthcare facilities.

Stock selection was positive in India, Indonesia and Saudi Arabia but was more than offset by poorer selection in China, South Korea and Brazil. Glenmark Life Sciences (renamed Alivus Life Sciences), Piramal Pharma and Siloam International Hospitals were among the best contributors to relative returns. Meanwhile Aspen Pharmacare, Shenzhen Mindray Bio-Medical Electronics and WuXi Biologics were among the main detractors to relative performance.

Market Review

On a calendar year basis, emerging markets healthcare returns lagged global equities, emerging markets equities and global healthcare equities, delivering a negative return of -2%. The benchmark remained in negative territory during the first half of 2024 as sentiment towards Chinese stocks weighed on the index. China was dogged by concerns regarding growth, property prices, consumer spending and worsening China/US relations. US inflation being stickier than hoped kept US interest rates elevated. In the second half of 2024, coinciding with the launch of the Fund, the benchmark rallied, as hope for a significant stimulus package in China grew and the US cut interest rates. The benchmark peaked in mid-October before a gradual grind lower to December.

Markets generally moved higher in June while the most populous country, India, went to the polls. What was expected to be a landslide victory for Prime Minister Narendra Modi pre-election proved to be much narrower once the votes had been counted. There was a short-lived general selloff with a flight to large-cap companies, away from small and mid-caps where the Fund was positioned in India.

In July, the broader market capitulated as technology and consumer discretionary companies came under pressure, although emerging markets healthcare held up well. India's first budget after June's election was well received – a focus on improving productivity while observing fiscal prudence steadied the market. China posted Q2 GDP at 0.4% below consensus at 4.7%, dragged down by soft property and retail sales and already pressured Chinese equities were weakened further by the absence of any significant stimulus after the third plenum session.

In August, global and emerging markets equities were back in the green and emerging markets healthcare performed strongly. The US central bank signalled it would adjust the interest rate policy on a more favourable inflation outlook and labour market. Chinese equities remained pressured as piecemeal initiatives to improve the economy had little impact on confidence. Shanghai's recommendations of financial support for innovative products, improved reimbursement, faster drug reviews and promoting globalisation went beyond those of Beijing and Guangzhou. Chinese healthcare stocks rallied. Indian first quarter results were strong and the domestic Indian pharmaceutical market remained robust with underlying growth of over 11%.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Emerging Markets Healthcare Fund continued

In September, global and emerging markets equities delivered positive returns but were eclipsed by those from emerging markets healthcare. The US central bank surprised with a 50 basis point (bp) interest rate cut. Progress stalled on the so-called Biosecure Act aimed at limiting the participation of certain Chinese manufacturing service companies, hence a relief rally in Chinese names. China also unleashed measures to revive economic growth, consumer spending and property markets. The policy rate was cut by 20bps, a 50bp cut to both the bank reserve ratio and the mortgage rate, coupled with lowering the deposit requirement on second home purchases and steps to shore up equity markets by providing up to RMB500bn for improved liquidity. The Shanghai Stock Exchange Composite Index ended the month up 17.4%.

In October, attention focused on the US presidential election. Global equities and global healthcare sold off as investors rotated, driven by the 50bp US interest rate cut and fading hopes of deeper stimulus in China. Macro data was light – the Indian central bank kept interest rates at 6.5% for the 10th consecutive meeting but shifted monetary policy to 'neutral' from 'withdrawal of accommodation', signalling that the rates could ease in the foreseeable future.

In November, global equities led with positive returns but healthcare lagged again as the market digested a surprise Republican clean sweep in the US elections. Uncertainty over US healthcare policy, the leadership of the Department of Healthcare and Human Services and concerns over global trade drove a general selloff in pharmaceutical and biotechnology stocks. Emerging markets and emerging markets healthcare pulled back on tariff jitters. The Chinese drug regulator completed its annual pricing review and supported reimbursement for more highly innovative drugs including three bispecific antibodies and two more antibody drug combinations. A policy to reduce working capital constraints within the hospital system was also introduced and therefore Chinese healthcare equities responded positively.

Global healthcare stocks suffered in December in a narrow market where information technology, communication services and consumer discretionary stocks did well. The US central bank cut rates by 25bps and signalled a 'wait and see' approach ahead of Trump's inauguration following an election campaign viewed as inflationary, particularly with respect to tariffs. China and India were relatively benign in comparison to Brazil and South Korea. Brazil's persistent inflation challenges prompted its central bank to hike rates by a greater than expected 100bps and signalled further hikes. Coupled with the initial outcome of a review of medical insurance practices that could impact sector profits, healthcare equities were hard hit. South Korean equities whipsawed after its President declared emergency martial law following a period of political frustration and parliamentary deadlock. Although lifted in a matter of hours as parliament voted down the declaration, the damage was done. President Yoon was later impeached.

Fund Activity

At launch the most significant benchmark weightings were in India (c30%), China and Hong Kong (c24% combined) and South Korea (c21%). The largest subsector weights were pharmaceutical (c38%), biotechnology (c23%), healthcare facilities (c20%) and life sciences tools and diagnostics (c11%).

At the time we were mindful of the relatively high valuations of Indian stocks, China/US geopolitical tensions and the potential impact of the Biosecure Act. On the positive side there was growing global interest in Chinese biotechnology products. The opening positions mirrored these considerations with relative underweights for China, India and life science tools and diagnostics and a relatively high cash position.

Fund activity in 3Q24 reflected our view of volatility in Chinese CDMOs (contract development and manufacturing organisations) due to the Biosecure Act, the persistence of anticorruption effects in Chinese medical device utilisation and signs that Brazilian healthcare profits faced pressure. In the quarter we exited all Brazilian holdings except Hapvida Participações e Investimentos (Hapvida). In China we cut AK Medical Holdings and Sonoscape Medical and added to Chinese biotechnology and pharmaceutical through investment in Akeso, China Medical System Holdings (CMS), Sino Biopharmaceutical and Yifeng Pharmacy Chain. We also opened a position in Celltrion, a South Korean biosimilar manufacturer.

In Q4, we completed our exit of Brazilian equities with the sale of Hapvida and took profit in Neuland Laboratories, an India-based contract manufacturing organisation which had benefited from speculation around the Biosecure Act. We increased our weighting to CDMO companies through Bora Pharmaceuticals and Binex and to SAI Life Sciences via its well-supported IPO in India.

Market Outlook

At the beginning of 2024, the outlook for healthcare seemed compelling, with fundamental drivers in a good place and return potential looking decent for the sector. However, frustratingly performance of healthcare stocks as a whole did not match that optimism for a variety of reasons, as highlighted earlier. For 2025, the outlook for the sector again appears to be compelling.

Attempting to be objective and taking a step back, the sector trades at discounted valuations in an absolute and relative sense compared to long-term historical data. The sector is forecast to grow earnings at 19% for the year, driven by robust fundamentals of utilisation and new product cycles. Lastly, sentiment is poor and signalling a contrarian buy signal, as highlighted by the current trend in ETF flows.

So what makes the sector work in 2025? First, on the macroeconomic outlook the US economy is critical and its strength has been a headwind for healthcare. If growth stays steady or slows, it should be tailwind for large and mega-cap healthcare companies. For small and mid-cap stocks, an easing of financial conditions would be supportive and if inflation follows its trend path lower, this should happen. Second, current absolute and relative multiples for healthcare stocks paint a picture of elevated political risks. From here, if the worst-case scenarios over the US political outlook that are reflected in current multiples are not realised, it could lead to significant multiple expansion and outperformance from healthcare.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

European ex UK Income Fund

Fund Performance

In 2024, the market was somewhat volatile, with various styles and stocks performing differently across the quarters. Defensive sectors generally underperformed compared to cyclical ones (we skew towards defensive sectors within value). We had limited exposure to the positive sentiment surrounding AI, which contributed to our relative underperformance – almost half of it was due to not owning the technology stock SAP, which saw a return of over 70%.

The Fund (Class I GBP Accumulation Shares) underperformed its benchmark, the MSCI Daily Net Total Return Europe ex UK Index, by 2.9% for the year, albeit it was behind by 6.3% in the first six months (all returns in sterling terms). This period was characterised by the US Federal Reserve signalling potential rate cuts in 2024, leading to a substantial risk rally. However, we recovered with a 3.3% relative performance in the second half of the year.

In 2024, the Fund's dividend grew by 3.8%, translating to a compound annual growth rate (CAGR) of 4.2% since 2016. We expect the Fund's dividend to continue growing in the mid-single digits in 2025. Given the starting valuations and the potential for compounding over the medium term, we remain optimistic about the outlook for the Fund's holdings.

Market Review

Key themes in 2024 included political instability in Germany and France, as well as concerns about a potential trade war between the US and China. In October and December, the European Central Bank (ECB) cut interest rates by an additional 25 basis points. ECB President Christine Lagarde expressed hope that inflation would meet the target of 2% by 2025.

In early November, the German coalition government collapsed when Chancellor Olaf Scholz dismissed Finance Minister Christian Lindner, leading to fresh elections scheduled for February 2025. Despite this political turmoil, German equities rose by 19% in 2024, highlighting that a country's stock market can perform significantly better than its economy, which remains under considerable strain.

Meanwhile, France's government faced challenges after Michel Barnier was removed from office as Prime Minister in a no-confidence vote – the first of its kind since 1962 – and other political parties disagreed with his budget proposals. The next parliamentary elections in France are not expected until July 2025.

With Donald Trump's second-term effects as US President, we are most concerned about the potentially disruptive effects of a US/China trade war escalation. Markets seem overly focused on the effect of tariffs on US inflation and insufficiently worried about their deflationary effect on the rest of the world. We believe that good global companies suffering selloffs due to political noise in their home countries should generally be viewed as buying opportunities.

Fund Activity

The Fund was very active in generating new ideas throughout 2024. We were able to find entry points in strong companies across various sectors – Infrastrutture Wireless Italiane (telecoms infrastructure), E.ON (integrated utilities), Aena (airports infrastructure), Iberdrola (integrated utilities), Kone (capital goods), Edenred (payment solutions), L'Oréal (staples) and Heineken (staples).

We sold several stocks on valuation grounds – Deutsche Telekom (telecoms), Novartis (pharmaceuticals), Roche (pharmaceuticals), Société BIC (consumer goods) and Coca-Cola Europacific Partners (beverages).

The Fund shows strong quality and value characteristics with its focus on identifying good companies when out of favour. More than two-thirds of the portfolio trades on less than 15x next year's price/earnings (P/E), the median stock P/E is just 13x and only four stocks are on more than 19x (Getlink; Kone; L'Oréal; SGS).

Market Outlook

Defensive dividend strategies are well-regarded for delivering attractive, long-term, risk-adjusted performance. This reputation stems from their defensive qualities which typically result in reduced downside volatility during weaker market periods. The European market offers strong dividend characteristics, featuring mature and blue-chip companies that provide growth and generate significant cashflow to support attractive dividends. Investors should recognise the importance of dividends as a component of total returns, especially in volatile markets where capital gains may be harder to achieve.

The post-Covid landscape has prompted many firms to adopt cash return policies, balancing generous ordinary dividends with additional share buybacks. Despite the impacts of the Ukraine conflict and rapid interest rate hikes from the ECB, the European region has demonstrated remarkable resilience, successfully navigating the Covid crisis.

However, the outlook for a second Trump term looks uncertain to us. The 2024 landscape looks very different from that of 2016 in terms of dangerous geopolitical escalations, the US fiscal position, global inflation and bond yields. From a European equity perspective, the three key channels for Trump effects are what happens to global bond yields, the Ukraine/Russia conflict and how far tariff policies go.

Therefore, we continue to emphasise the importance of evaluating both valuation and cyclical risks. With no expectation of a return to ultra-low bond yields, overvalued equities may face downward pressure after a brief respite in 2023. Quality growth investors may experience a prolonged derating of crowded stocks, while a higher cost of capital environment should favour our core skills in valuation discipline and risk management.

European Income Team

Polar Capital LLP

January 2025

Financial Credit Fund

Fund Performance

In its first full year following a change of strategy and name, the Fund (Class I GBP Accumulation Shares) rose 11.7% while its benchmark index, the ICE BofA Global Financial Index, returned 5.2% (both figures in sterling terms). The ICE BofA Global Government Index rose 1.3%, the ICE Euro Subordinated Financials Index rose 8.4% and the ICE BofA Contingent Capital Index rose 12.5%.

Market Review

A modest backup in 10-year government bond yields across most major economies led to very modest returns for government bonds over the year. This was particularly the case in the US, but notably not so in Italy, South Korea or China where yields fell, the latter on worries about weakness in the Chinese economy and its ongoing property bust. Nevertheless, with inflation continuing to moderate but growth still steady there was an expectation of central banks cutting interest rates. The vast majority did so and credit markets had a very strong year as the difference between corporate bond and government bond yields narrowed materially.

Notwithstanding a political crisis in France, the UK and the US saw yields on their respective government bond markets rise the most, with expectations of interest rate cuts in the US being reduced against a backdrop of stronger than expected economic data but concern around the tax and spending plans of the incoming administration of Donald Trump. The UK's Labour government missteps around its first budget led to higher borrowing requirements and higher wage growth partly caused by a well-above inflation increase in the national minimum wage which led to a fairly sharp selloff in UK government bonds.

Against this background, spreads for senior and subordinated (junior) financial bonds narrowed steadily over the year with only brief periods when that trend reversed. Additional Tier 1 (AT1) bonds and Restricted Tier 1 (RT1) bonds saw the strongest performance, reflecting the fact that they are the most subordinated debt capital of a financial company and trade at higher yields and therefore wider spreads versus equivalent similarly dated government bonds. Longer-dated financial bonds also performed well due to their higher sensitivity to a change in spreads. This narrowing was underpinned by strong fundamentals as banks reported good profitability and reassuring trends around the asset quality of underlying loans.

Regionally, the performance of bonds issued by financial companies in countries such as Portugal, Greece and Cyprus saw the best returns. European banks in these countries have been on a long road to recovery since the Eurozone financial crisis, cleaning up their balance sheets by selling non-performing loans or seeing them improve as borrowers' ability to service their debts improved. This was coupled with a sharp improvement in profitability, as banks in these countries are very sensitive to rising European Central Bank interest rates due to a high exposure to floating rate loans. Consequently, this improvement led to several upgrades to credit ratings to reflect the vastly improved fundamentals.

There was some volatility in the year for a small number of banks that had higher exposure to US office commercial real estate (CRE). New York Community Bancorp, a US regional bank, and Aozora Bank, a Japanese lender, both announced in February that they would be taking large loan loss provisions. Aozora Bank reported a \$2.3bn US CRE portfolio as of the end of December 2023, with 74% classified as office and crucially 37% as non-performing, leading to a fall of over 35% in its share price before it saw a partial recovery, albeit with limited impact on its bonds.

This had a knock-on effect at several German CRE-focused lenders, including Deutsche Pfandbriefbank, which saw its AT1 bonds and share price initially fall by 70% and 30% respectively. While both were able to recover during the period, with the AT1 trading at its pre-crisis level by the end of the year following reassuring comments about liquidity strength and funding requirements, market concerns about CRE remain given the rapid change in the interest rate environment in recent years.

There was a pickup in M&A activity leading to a tightening in the spreads of the acquired banks. Nationwide Building Society, the UK's largest mutual, agreeing to acquire Virgin Money UK for £2.9bn, a 40% discount to book value. Meanwhile, Coventry Building Society, with total assets of £62bn and the UK's second-largest mutual, made a £780m cash takeover of the Co-op Bank. BBVA also announced that it had approached Banco de Sabadell about a possible merger and was willing to offer a 30% premium in an all-share deal. In the second half of the year, UniCredit Bank, Italy's second-largest bank, took a large stake in Commerzbank, one of the largest German banks, expressing an interest to acquire it before subsequently making an offer for Banco BPM, Italy's fourth-largest bank.

During the year there were several regulatory developments concerning AT1 bonds and depositor preference within the creditor hierarchy. Although it has been nearly two years since FINMA, the Swiss financial regulator, shocked investors by ordering the full write-down of Credit Suisse's AT1 bonds, the ramifications of this decision continued to reverberate through regulatory consciousness. At the time, regulators globally stated that they would stand by the creditor hierarchy, implying that they would not have allowed Credit Suisse AT1 bondholders to be written down to zero while shareholders were not.

In March, the Dutch Finance Ministry commented on the suitability of the asset class and this was followed by commentary by the Swiss National Bank (SNB), the Bank of International Settlements – the central bank's bank – and the Australian Prudential Regulatory Authority (APRA). Each questioned the going-concern suitability of AT1s as part of a bank's capital structure and urged reform. APRA went even further, taking the decision at the end of the year to phase out AT1 bonds and to require Australian banks instead to hold a higher level of equity and Tier 2 capital (non-core supplementary debt held in reserve).

Financial Credit Fund continued

Market Review continued

The European Council also added its support to the European Commission and European Parliament's proposals to introduce full depositor preference. This compares with the current situation across 19 of the EU's 27 member states, which currently have deposits from financial institutions and large corporates ranking in line with unsecured liabilities, such as senior preferred debt. While the European Council's proposals have, to our mind, added an unnecessary element of complexity to the mix, the direction of travel is clear, with depositors expected to rank highest within the creditor hierarchy.

Finally, banks and insurance companies continued to retire legacy debt during the year, so-called because the prospectuses of the bonds in question do not include bail-in provisions and consequently no longer count towards financial companies' regulatory capital. While the companies in question have often stated their desire to keep the bonds in issue, where the coupons are low so therefore a source of cheap funding, regulators have often seen the bonds being kept outstanding as an 'infection' risk to a bank or insurance company being bailed in, in an emergency. Consequently, HSBC, BNP Paribas, Banque Fédérative du Crédit Mutuel, RSA Insurance and AIB Group among others all either called or tendered for bonds during 2024.

Fund Activity

At the beginning of the year the Fund was positioned with a very constructive view on the outlook for credit, holding the maximum amount it can invest in AT1 and RT1 bonds. While spreads had narrowed from the wide levels seen during the forced sale of Credit Suisse to UBS Groep and the write-down of its AT1 bonds in March 2023, they were still wider than historical averages. As spreads narrowed over the first few months of the year to below historical averages, the decision was made to reduce exposure to AT1 bonds. We sold holdings in UniCredit, BPER Banca (the fifth-largest Italian bank) and AIB Group.

Conversely, we took advantage of strong issuance markets to participate in the issue of new Tier 2 bonds issued by Advanzia Bank (German-focused credit card business), Piraeus Bank (Greek's largest bank) and Caixa Economica Montepio Geral (Portugal's seventh-largest bank). We also purchased new holdings in senior bonds issued by the likes of Citigroup, M&T Bank (US regional bank headquartered in Buffalo, New York) and Jefferies (US investment bank). In the second half of the year, we also bought new holdings in Tier 2 bonds issued by Atom Bank (UK digital bank based in Durham) and AT1 bonds issued by Newcastle Building Society.

A number of changes were made to holdings in legacy bonds, buying and selling holdings in Rothschilds and Banque Fédérative du Crédit Mutuel during the period. Holdings in HSBC and AIB Group were sold as a consequence of both banks tendering their bonds. We had bought the latter only a month earlier as we thought there was an increased probability that it would do something after it confirmed to us that the bond would no longer count towards Tier 2 capital in 2025, but it acted much quicker than we expected. We also added to our holdings in the preference shares of NatWest Group and Investec where we believe the high cost of both increases the likelihood of management looking to buy back or tender their preference shares at some point.

While we increased the duration of the portfolio over the year, most recently adding to our holding in Rabobank, a Dutch cooperative bank, on a couple of occasions we reduced the duration of the portfolio at the margin through the use of interest rate hedges, selling US Treasury futures at the beginning of the year and also buying put options on a US Treasury future in the second half of 2024. In the middle of the year, we also took the opportunity to hedge some of our credit risk to protect against any unexpected volatility by selling a credit default swap on the Markit iTraxx Europe Subordinated Financials Index.

Market Outlook

The underlying fundamentals of the financial sector remain very robust with strong balance sheets and profitability and loan books showing little or no deterioration in asset quality. In the shorter term, interest rate cuts by central banks will put pressure on net interest margins and therefore profitability for some banks. However, with interest rates not expected to be cut to the low levels seen between the global financial crisis and 2022, profitability is expected to remain at much higher levels than those seen during and before the pandemic. Conversely insurance companies will continue to benefit from bond yields likely remaining higher for longer, allowing for reinvestment of maturing lower-yielding securities at more attractive levels.

Today, financial bonds trade at the lower end of the post-global financial crisis trading range of spreads over government bonds. Recent history would suggest that when this has been the case it has not been prudent to take excessive risk. Counter to this, spreads were lower before the global financial crisis and the fundamentals are now far better because banks have more capital, more liquidity and are more profitable while taking less risk. All things being equal, they should therefore trade on even tighter spreads. Furthermore with government bonds giving holders a real inflation-adjusted return – something missing for most of the past 15 years – one could see spreads tighten further, i.e. yields falling and returns continuing to outpace the nominal yield on individual bonds.

Nevertheless, we see the market as a fickle beast and risks abound. In 2024, the market was willing to ignore geopolitical events and the fiscal largesse of the US Treasury, helping to ensure the US economy remained stronger than expected. It has ignored weakening unemployment trends. It has ignored rising credit card defaults as it ignored that pandemic savings have on the whole been spent. It has largely ignored the implosion of the Chinese economy and the deterioration in the European economy.

While we are no longer in the 'everything bubble' phase that we saw in 2021 with trillions of dollars of negative-yielding bonds and equity markets buoyed on the back of meme stocks and SPACs (special purpose acquisition companies), equity markets are not cheap on any metric. While we remain constructive on the outlook for the asset class, we expect 2025 to be less forgiving of financial markets. However, with 75.5% of the Fund in cash, government bonds and senior and Tier 2 bonds we would expect it to be much more resilient than many alternatives.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Financial Opportunities Fund

In terms of performance, the NAV of the Fund (USD I Acc Share Class) rose 21% in the year relative to a 24% rise in the benchmark (MSCI All Country World Financials Net Return Index).

While absolute performance was strong with sentiment towards the Financials sector supported by growing confidence in a US 'soft landing' and expectations of regulatory easing following the US election, relative performance was affected by allocation headwinds (overweight in Europe), along with weakness in certain FinTech and emerging market holdings.

Within Asia, the largest regional negative contributor to relative performance, the Fund's underweight position in China and Australia weighed on performance, particularly in Q4 following the Chinese government's announcement of stimulus measures.

On the advice of the Investment Manager, and given the small size of the Fund and a period of weak relative performance, the Directors of the Company took the decision to terminate the Fund with effect from 28 February 2025. All the shares in the Fund will be fully redeemed on this date.

Polar Capital LLP

February 2025

Global Absolute Return Fund

Fund Performance

The Fund returned 8.7% in 2024, taking its return since inception to 48.4%.

Market Review

Global headline equity indices had a generally positive year, led by the US (S&P 500 +23.3%) and Asian markets (Hang Seng +17.7%, TOPIX +17.7%). However, US market breadth was historically narrow, evidenced by the outsized performance of the Bloomberg Magnificent 7 Total Return Index (+67.3%) compared to the broader S&P 500 Equal Weight Index (+10.9%) and small-cap indices (Russell 2000 +10%, S&P 600 Small Cap +6.8%).

US interest rates rose across the curve (5yr Treasury yield +53 basis points (bps), 10yr +69bps, 30yr +75bps), credit spreads tightened (Markit's North American High Yield CDX Index -45bps), and the US dollar strengthened (+7.1%). Bitcoin (120.5%) was among the year's best-performing assets. Equity volatility increased, with the VIX Index (a widely used measure of expected volatility in the US market) ending up 39.3%. Chinese equity markets experienced volatility due to underweight positioning, economic stagnation and inconsistent government stimulus. Geopolitical tensions, such as the Ukraine/Russia and Israel/Hamas conflicts, contributed to volatility and a perception of US economic resilience.

Within the convertible universe, new issue volume was strong in 2024, rising 50% year-on-year to \$119bn globally (per Bank of America). By region, the US continued to dominate in terms of both existing market size and new convertible issuance, finishing the year at \$281bn (71% of the global convertible market) with \$84.7bn of new issuance. In this region, while duration is low for a convertible relative to most other fixed income products, valuations nevertheless experienced a headwind from rising interest rates. However, this was more than offset by valuation tailwinds because of tighter credit spreads and rising equity markets. The most notable events during the year came from a post-US election rally on policy optimism, especially for mid-cap companies. In addition, later in the year we also saw an increase in both digital asset and high-performance computing-related new issues coming to market, further diversifying the opportunities.

In Europe, new issuance remained generally weak as, despite optimism around a wave of refinancing activity potentially coming due from Covid-related issuance, much of this was refinanced in the straight debt markets. This led Europe to experience one of its lowest new convertible issuance volumes on record. As a consequence, convert valuations tended to richen slightly, while lower rates and tighter credit spreads in the region also helped valuations.

Turning to Asia, Japan saw a strong start to the year for new issuance on the back of optimism around corporate governance reforms and increased interest from investors, albeit the region remains small relatively. In Asia-ex Japan, new issuance volume was relatively strong, driven by a number of large-cap Chinese companies issuing bonds that convert into their American Depositary Receipts (ADRs) as a way to raise money outside China.

Fund Activity

Against this backdrop, we remained focused on our investment process of placing most emphasis on investing in convertibles with good credit quality, asymmetric return profiles and identifiable, and preferably near-to-mid-term, equity catalysts.

Returns were generally steady month to month in 2024 as we were able to monetise various pockets of volatility in the markets, including French political uncertainty, new Japanese government-induced volatility and stock-specific events. The most notable Fund activity during the year however came from our positioning around the US presidential election where we moved from a modest overweight position beforehand to a larger overweight shortly afterwards. This enabled the Fund to take advantage of the post-election volatility in US mid-caps in both our Asymmetric and Equity Hedged investment categories.

Towards the end of the year we took some profits but nonetheless gave part of this performance back as the convert market saw pockets of valuation weakness, particularly in some converts deemed related to digital assets. This stemmed from one or two prime brokers increasing collateral requirements for these bonds given the highly volatile nature of their underlying equities. This was a modest headwind to performance in December but we largely maintained the positions and are benefitting from a rebound in these assets in January.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Global Absolute Return Fund continued

Market Outlook

Surveying the current backdrop, we continue to see competing crosscurrents. In Japan and Europe there is very real political uncertainty. While we may now have political certainty in the US with the Republican clean sweep, it would be a brave person to predict the road ahead will be a certain one, given the experience of Trump's first presidential term.

Economically, the US picture appears robust, although deglobalisation and the introduction of trade tariffs will ultimately slow growth and be inflationary.

It remains to be seen how China will react to the introduction of tariffs, but we can be certain it will react. In the meantime Chinese growth and the latest Chinese stimulus package have so far underwhelmed.

Yet despite these very clear headwinds the market marched strongly forwards in 2024, making new equity highs and breaching historic valuation metrics. At some point a pause, consolidation, correction or worse seems inevitable.

As we take a step back, investors are asking: "Where do we go from here?" For many, this is a difficult question to answer and, consequently, makes positioning a particularly difficult dilemma.

We believe convertibles offer investors caught in this investment dilemma an alternative asset class to consider. It is an asset class that is enjoying a renaissance of issuance and hence increased opportunities for investors. It is an asset class that benefits from increased uncertainty with a positive correlation to increased equity volatility. Finally, it is an asset class that offers both the ability to mitigate downside risk and maintain upside participation.

Fund Activity

Against this backdrop, we remained focused on our investment process of placing most emphasis on investing in convertibles with good credit quality, asymmetric return profiles and identifiable, and preferably near-to-mid-term, equity catalysts.

The most notable Fund activity during the year came from our positioning around the US presidential election where we moved from a modest overweight position beforehand to a larger overweight shortly afterwards.

Despite our increase in the US over this period, for the year as a whole we deployed approximately half our capital in the US and the rest internationally. This allowed us to take advantage of some of the attractively priced new convertible issuance in the region before subsequently moving to an overweight in those names deemed most attractive from a medium-term perspective. Indeed, several of the top contributors to Fund Performance in 2024 were from converts issued during the year. This included Rocket Lab, whose convertible appreciated meaningfully alongside the underlying equity as the company continued to execute on its rocket development plans. It also includes Telix Pharmaceuticals, an Australian healthcare company developing radiodiagnostic and radiotherapeutic products for the burgeoning market for radiotheranostics, particularly within prostate and kidney cancer.

In addition to the above, Fund Activity mainly centred around ensuring the portfolio maintained a good credit quality, attractive yield and a highly convex return profile.

Polar Capital LLP

January 2025

Global Insurance Fund

Fund Performance

In 2024, the Fund (Class R GBP Accumulation Shares) returned 26.1% versus 24.0% for the MSCI World Net Insurance Index benchmark. This compared with 21% for the MSCI World Daily Net Total Return Index, 9.5% for the FTSE All Share Index and 27.5% for the S&P 500 Index (all figures in sterling terms).

The Fund's strong year of absolute and relative performance was driven by excellent book value growth at many portfolio companies. We entered the year after a frustrating 2023 which had seen a significant derating of our companies. The 5% constant FX (foreign exchange¹) return for 2023 comprised of outstanding book value growth of 21% offset 16% by falling price to book valuations, with the Fund's price to book multiple falling from 190% to 170% over the year.

Most of the derating had occurred in the first quarter of 2023 as the sector suffered what was in our view unjustified contagion from issues in the banking sector, as well as weakness in the fourth quarter following dovish comments (i.e. potentially lowering interest rates) from the Federal Reserve. We saw no change in earnings power for our companies in 2023 and therefore continued to expect 16%+ book value growth in 2024. We believed this strong growth would most likely be the driver of performance in the Fund in the year, but we also thought the unjustifiably low valuations at the start of the year could be a meaningful tailwind to future returns.

Our companies reported book value growth of 19% for 2024, following 21% in 2023. The portfolio's earnings power stepped up in 2022 with expected book value growth rising from its historic 10–11% average rate to an estimated 16%+. This was driven by a material rise in prospective yields from our companies' defensive investment portfolios, which are dominated by short-dated bonds, adding to already attractive underwriting returns. Bond yields were volatile over 2024 but the US two-year Treasury yield was largely unchanged, remaining at 4.25%. Short-term changes in bond yields can lead to our companies reporting temporary marked to market investment gains or losses despite their 2–3 year duration and low investment leverage.

Given there was an intra-year trough in September of 3.6% for the US two-year Treasury yield, in the Q4 2024 earnings, our companies saw some marked-to-market investment losses, reversing the gains of the first nine months of the year. For the year overall, our companies had negligible marked-to-market impacts from changes in the fair value of their bond portfolio, thereby earning an after-tax return that we conservatively estimate at 3.6% on invested assets simply from clipping their bond coupons. Given investment leverage of 2.5x to shareholders' equity, this contributes 9% to book value growth for the year.

To this investment return we can add another year of excellent underwriting profits, giving total book value growth of 19% for 2024 which is comfortably ahead of the 16%+ estimate we had at the start of the year. The Fund's book value growth is the key metric we focus on as managers when we assess our own scorecard, and in this respect we are delighted with how the Fund's companies performed in 2024.

The Fund's return of 26% for the year was 25% at constant FX given the modest strengthening of the US dollar versus sterling. We estimate the 25% constant FX return comprises of 19% book value growth and 6% from a rise in price-to-book valuations. We estimate the Fund's price-to-book rose from around 1.7 times to 1.8 times over the year, representing a recovery of roughly half the loss of multiple in 2023.

Market Review

We live in an age of risk and the ability to transfer risk continues to gain in importance. Insurance fundamentally is a promise to pay an amount of money when something bad happens. The sorts of thing that trigger claims payments are accidents, human negligence, bad weather, natural catastrophes and terrorist events. Managing and insuring risk is becoming ever more complex given rising climate change volatility, a proliferation of cyber threats, increasingly large jury verdicts and social inflation. In a world of relentlessly increasing risk the value the insurance industry provides has never been greater. Rising risk complexity expands the opportunity set for specialty underwriters at the expense of more general insurers. We invest in these specialty insurers.

2024 was another year of significant catastrophe activity with the reinsurance broker Guy Carpenter estimating insured catastrophe losses approaching \$130bn, including two significant hurricanes making landfall in Florida (Helene and Milton), the likely largest ever marine loss with the collapse of the Baltimore Bridge and another record-breaking year for severe convective storm activity in the US. Hurricane Milton was the largest event of the year and was one of the most intense hurricanes ever seen in the Gulf of Mexico before making landfall in early October as a Category 3 hurricane. Industry commentators estimate insured losses of \$20–40bn for Milton which, for context, compares with initial estimates of c\$50–60bn for Hurricane Ian in 2022 which had acted as the catalyst for the reset in the reinsurance market at the 1 January 2023 renewals.

Similarly to 2023, catastrophes in 2024 were largely borne by the primary insurers, particularly the personal lines companies where the Fund has low exposure. The hard reset of the reinsurance market at 1 January 2023 led to a significant rise in retentions, moving reinsurers away from frequency risk. Guy Carpenter estimated that the reinsured share of the 2024 catastrophe losses fell to 14%, down from the pre-2023 average of 20%. Reinsurers have returned to their historical business model of balance sheet protectors, which stands in sharp contrast to the earnings protection they were providing during the 2014–21 period of softer pricing.

Risk globally continues to be re-evaluated and repriced, which is providing excellent growth opportunities for our companies. The strong underwriting environment that began in 2018 continues. The Global Insurance Market Index published by insurance broker Marsh, which is skewed to the medium/large commercial market, has seen compounded rate rises of a significant 60% since Q4 2018.

1 Constant FX means applying a fixed exchange rate to offset the negative impact of currency fluctuations; this gives an indication of the FX impact on the sterling share class as the Fund's primary performance reporting metric

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Global Insurance Fund continued

Market Review continued

As expected, price changes have slowed in recent quarters given underwriting margins in most lines of business have been restored to attractive levels. However, rate increases in commercial insurance remain robust with rises more pronounced for specialty risk (the excess and surplus lines (E&S) market) and the US market (c60% fund premium). We estimate pricing to be rising 6–7% annually on average across the portfolio with large commercial accounts closer to bring flat and small and medium-sized risks at or higher than the average. For the Fund, we believe rate rises are broadly in line or a little ahead of expected loss cost inflation² and therefore supportive of the current excellent level of underwriting margins.

Catastrophe reinsurers' returns have materially increased since the hard reset of the reinsurance market on 1 January 2023. Catastrophe pricing rose 40% across the 2023–24 renewals and importantly reinsurers increased retentions, moving themselves away from the risk. This 1 January date is key in the reinsurance calendar when around 50–60% of property catastrophe business is placed, with a bias to European and global accounts. Early market commentary for the 2025 renewal has shown that after two highly profitable years reinsurer appetite for risk has increased (10–15%, per Guy Carpenter). Demand for catastrophe cover continues to increase (5%, per Guy Carpenter) particularly at the top end of programs as buyers continue to react to increasing natural catastrophe activity, although this was not sufficient to offset the greater supply of capital. Consequently, pricing fell year on year with reinsurance broker Howden estimating overall risk-adjusted property catastrophe pricing down 8% on average. Expected catastrophe profitability for 2025 is therefore modestly below the 2023–24 peak but remains excellent with pricing remaining at levels not seen since the mid-1990s. Guy Carpenter is forecasting mid-teens returns on equity (RoE) for its reinsurance composite in 2025 and 2026. We expect our reinsurers to earn returns comfortably more than this industry average.

Fund Activity

The Fund continues to exhibit low turnover of holdings and we did not change our overall positioning materially during the year. In January, we sold our holding in Aon, replacing it with its insurance broking peer Brown & Brown. We also exited two small holdings, reinvesting the proceeds across the remaining portfolio, and took a small position in the May 2024 IPO (initial public offering) of US commercial insurer Bowhead Specialty Holdings.

Market Outlook

We believe underwriting market conditions remain excellent. Following the hard reset of the reinsurance market in 2023, it continues to experience some of its best conditions for over 20 years. A disciplined reinsurance market continues to underpin primary insurer behaviour. Primary commercial pricing is rising by mid-single digits on average across the portfolio, which we believe is sufficient to offset loss cost inflation.

Reinsurance pricing remains excellent in property catastrophe and is strengthening in casualty reinsurance. Consequently, we expect the very strong underwriting margins for Fund holdings to persist for at least the next few years.

The returns our portfolio companies are reporting are generating a growing amount of excess capital that can be used for increased dividends, share repurchases and M&A (mergers and acquisitions). Material special dividends were paid in Q4 by Arch Capital and Lancashire Holdings and we expect share repurchases across the portfolio to rise in 2025 given continued attractive valuations. Many commentators expect industry M&A to increase. In November, the Fund's holding, Direct Line Insurance, received its second bid of 2024, this time from UK-listed peer Aviva which led to a recommended offer in late December at a 60% premium to the pre-offer share price.

In the end, what drives long-term performance in the Fund is our companies' ability to compound book value per share and dividends at an attractive rate over time. In the 26 years the Fund has been running, we estimate this metric has compounded at 11% per annum, which as you would expect is close to the Fund's performance over the same period. In late 2022, we witnessed a step change in the earnings power of our companies, driven by excellent underwriting markets and higher investment returns from their short-dated bond portfolios. At that time we revised our best estimate of the next 12-month book value growth to 16%+ which is well above the historical average. Our companies have more than delivered that since then. They achieved outstanding book value growth of 21% in 2023 and as noted above we are expecting 19% for 2024. We continue to expect mid/high-teens book value growth (16%+) for the foreseeable future given our expectation of continued strong underwriting margins and robust investment income that has been further reinforced by the uptick in bond yields following the US presidential election. We believe the Fund currently offers a cash-on-cash return of approximately 10% (defined as expected book value growth divided by price to book multiple) significantly above the long-term average of 8%.

Constructing a diversified portfolio of 30–35 stocks focused on specialty underwriters that can deliver double-digit growth in book value per share over time remains the core of our investment process. As 2025 begins, we are confident that our companies will again deliver some of their strongest earnings and book value growth in the Fund's history. We expect this trajectory of book value growth combined with the current attractive valuation multiples of the Fund companies noted above can lead to attractive investor returns over the coming years.

Polar Capital LLP

January 2025

² Rising costs of claims over time, increasing expenses for insurers, potentially leading to higher premiums.

Global Technology Fund

Fund Performance

In 2024 the Fund (Class USD Distribution Shares) returned 30.7% versus the Dow Jones Global Technology Net Total Return Index's 33.3% (both figures in dollar terms). The Fund delivered top quartile performance in its peer group, according to Lipper, for a second successive year as well as on a three-year basis. AI continued to be the dominant theme, with further dispersion in performance between the perceived AI winners and losers. In particular, the AI infrastructure build-out continued to accelerate, driving strong performance for select semiconductor, component and networking stocks.

Relative performance versus the benchmark was, however, impacted by the Fund's structural underweight position in the largest technology companies which continued to outperform. The market remained narrow for much of the year as the Magnificent Seven¹ (up 67.3%) led markets higher, benefitting from positive earnings revisions and excitement about artificial intelligence (AI), accounting for almost 60% of the S&P 500 Index's return. NVIDIA was again the standout performer, returning 171%, driven by exceptional growth (the forecast for the year to the end of January 2025 is for revenue of 112% year on year (y/y) and GAAP (generally accepted accounting principles) earnings up 144%). This degree of concentration is unusual to say the least and the Fund is unable to exceed 10% in any individual stock (per UCITS rules).

Large-cap technology stocks significantly outperformed as the Russell 1000 Technology Index (large cap) and Russell 2000 Technology Index (small/mid-cap) returned 38.2% and 23.6% respectively. Encouragingly, this did somewhat reverse in the second half of the year after mega-cap technology rose >40% in H1 and only 11% in H2 (per Goldman Sachs) compared to the Russell 2000 Technology Index which was up 7% in H1 and close to 20% in H2.

Another factor which temporarily impacted the Fund's relative performance was US dominance of global markets: the absence of mega-cap 'AI winners' saw the Dow Jones World ex-US Technology Index underperform meaningfully again, rising just 14.3%. Following the US presidential election result, with pro-US tailwinds likely to persist, we made a significant portfolio rotation towards a more neutral US weighting, reducing what was previously a significant overweight position in Asia, largely due to the AI semiconductor supply chain.

Generative AI (GenAI) remained the dominant market theme, with significant dispersion in performance between perceived AI winners and losers. Key enabling technologies supporting AI infrastructure performed well across the compute, network and power sectors as hyperscalers² raced to build out their AI offerings and train ever-larger models.

Performance reflected our decision to embrace AI fully and the introduction of an 'AI lens' to our investment process to help assess every portfolio holding and potential holding in terms of their positioning in an AI-first world. As a result, the Fund benefited from positive stock selection and an overweight exposure to the AI theme that again dominated returns and investment discourse during the year.

Market Review

The MSCI All Country World Net Total Return Index gained 17.5%, while the S&P 500 Index returned 25% (both figures in dollar terms). The strength of the US equity market reflected stronger than expected economic growth while the Federal Reserve (Fed) pivoted to an easing cycle, enabled by moderating inflation and resilient employment data. While the US dominated, Asia delivered solid returns (the MSCI All Country Asia ex Japan Index up 19%) with Europe (Eurostoxx 600 Index 2%) and Japan (TOPIX Index 8%) trailing. US large-cap stocks continued to dominate with the Russell 1000 Index up 25% compared to the Russell 2000 Index up 11%.

Volatility saw a pronounced spike in August following weak US labour market data and significant yen strength after the Bank of Japan (BoJ) hiked its policy rate by 0.25% and announced plans to halve its purchases of Japanese government bonds. This prompted a sharp unwind of the yen carry trade (where investors borrow 'cheaply' in yen – as Japanese interest rates are lower – to buy other assets/currencies) and a market correction. The magnitude of the correction was unusual: the VIX Index (a measure of volatility) touched 60, its third highest level in recent history after Covid (2020) and the global financial crisis (2008). However, developed markets rebounded sharply on the back of renewed confidence in US economic resilience and coordinated actions from Japan's government and central bank.

The labour market continued to cool during the period with the July jobs report sending a recessionary warning signal by triggering the Sahm Rule (when the three-month moving average unemployment rate increases 50 basis points³ (bps) from its lowest point during the previous 12 months). However, the unemployment rate ticked lower in subsequent jobs reports while Treasury yields fell and financial conditions loosened in anticipation of the start of the Fed's interest rate-cutting cycle. This started with a 50bps cut at its September meeting, which marked a near-term low when yields moved sharply higher as Donald Trump's election prospects improved and concerns around the fiscal deficit (whichever candidate prevailed) intensified.

Trump's decisive victory alleviated political uncertainty and prompted the biggest ever post-election rally. The Republican clean sweep further buoyed sentiment, increasing expectations for pro-business policies (deregulation; lower taxes) that should hopefully offset potential negative effects from tariffs. As the major macroeconomic and political risks dissipated over the year, equity multiples expanded and credit spreads tightened.

1 Apple, Microsoft, Alphabet, Amazon NVIDIA, Meta Platforms and Tesla.

2 The largest cloud service providers (AWS; Microsoft Azure; Google Cloud; Meta Platforms; Apple; TikTok).

3 A basis point is a common unit of measure for interest rates and other percentages in finance. One basis point equals 0.01%.

Investment Managers' Reports continued

Global Technology Fund continued

Market Review continued

Unfortunately, this post-election rally lost steam in December due to worries that some of the President-elect's policies, such as tariffs, may prove inflationary. While the Fed cut the federal funds rate at the December meeting as anticipated, this was accompanied by more hawkish projections for the path of interest rates and inflation, in part due to potential policies from the incoming administration.

Technology Review

The technology sector once again outperformed the broader market with the NASDAQ Composite Index closing in on positive territory for the 19th time in 22 years. The Dow Jones Global Technology Net Total Return Index grew 33.3% compared with the respective gains by the S&P 500 and MSCI All Country World indices' gains of 25% and 17.5% respectively.

Internet stocks, as represented by the NASDAQ CTA Internet Index, outperformed in 2024, gaining 30%. Company fortunes were bifurcated within the sector, reflecting different AI starting points and significantly upward revisions to capital expenditure (capex) plans. Meta Platform's (Meta) renaissance continued as it posted strong results that were more than sufficient to allay any concerns about increased AI-driven capex. The company showed strong signs of AI progress across its platforms with AI-driven feed improvements said to have increased time spent on Facebook and Instagram.

Amazon struggled in the first half of the year, but steady AWS (Amazon Web Services) acceleration and upward revisions to operating profit from greater efficiency in the retail business supported a stronger second half of the year. Netflix subscriber numbers exceeded expectations, helped by an earlier crackdown on password sharing, price increases and its advert-supported tier. Spotify Technology also delivered better than expected subscriber growth, with average revenue per user accelerating as it also raised pricing. The Trade Desk also outperformed due to strength in the connected TV advertising market and partnerships with Netflix, Disney and Roku beginning to bear fruit.

Software stocks, as per the Investment Grade Value Index (IGV up 23.4% in its fiscal year), lagged for the first half of 2024 (up 7%) as AI semiconductor and infrastructure stocks led the way. The existential software 'AI bear case' gained traction as software companies delivered generally soft Q1 earnings reports following a sharp move higher into the end of 2023 on rates relief. Software started to recover in Q3 as the AI trade paused, China restriction/tariff concerns moved up in line with Trump's election odds (software has very little China exposure), software demand (and forward estimates) stabilised and investors warmed to a nascent 'agentic AI'⁴ narrative.

The beginning of the Fed's rate-cutting cycle in September and post-election risk-on appetite also helped (IGV up 15% in November) and ultimately software recovered 28% from the August lows. Microsoft captured cloud share during the period, with AI contributing strongly to Azure's growth. The company expects its AI business to exceed a \$10bn annual revenue run rate next quarter and 70% of the Fortune 500 companies are said to be using Microsoft 365 Copilot products. However, these gains did not translate into meaningful positive earnings revisions, in part due to higher capital spending necessary to meet AI demand, as well as higher 'other income' losses associated with its OpenAI investment.

The Philadelphia Semiconductor Index underperformed the wider technology market, gaining 20.4% for the year as non-AI/more cyclical end markets (autos; PCs; smartphones; industrials) disappointed. NVIDIA once again led the sector given insatiable demand for its GPU-based (graphics processing units) systems and while reported delays to its next-generation Blackwell chips created stock price turbulence during the year, CEO Jensen Huang reassured investors that the chip design issues had been solved and would result in only a three-month delay.

AI chip rival Broadcom also enjoyed strong demand in its custom silicon business as hyperscaler customers continued to supplement GPUs with their own ASIC (application-specific integrated circuits) designs. Broadcom's networking business also performed well as key customers such as Arista Networks benefited from AI-related data centre spending. In contrast, Advance Micro Devices (AMD) fared less well despite making good progress in its own AI chips. This reflected cyclical headwinds that weighed on its non-AI revenues as well as concerns that NVIDIA's expansion into full-stack AI systems might frustrate AMD's competitive efforts. Things were considerably worse at long-time rival Intel* which reduced guidance, suspended its dividend, cut capital spending and booked a record loss during the period. Intel's travails largely reflected the challenge of competing with TSMC and the shift to AI-centric compute.

Strong AI-related demand for leading-edge manufacturing allowed semiconductor equipment suppliers such as KLA to shrug off non-AI end market weakness. However, equipment providers reversed their earlier gains following foundry-related capex cuts at both Intel and Samsung Electronics*. Furthermore, weak Q3 orders at ASML pointed to a potentially permanent change in leading-edge market dynamics with fewer more powerful buyers. This, together with concerns about potentially tighter export controls to China in the event of a Trump victory, weighed heavily on the group.

⁴ Agentic AI refers to an advanced AI system that autonomously takes actions, adapts in real-time and solves multi-step problems based on context and objectives.

AI also provided tailwinds for both Apple and Tesla despite challenging smartphone and electric vehicle (EV) end markets. For Apple, results were uninspiring but overshadowed by excitement about a potential AI-driven iPhone upgrade cycle following the release of Apple Intelligence, its suite of AI features integrated into iOS 18 announced in June. Despite challenging macroeconomic conditions, Tesla met vehicle delivery expectations, albeit with variable automotive gross margins. However, investor sentiment was buoyed by AI-driven progress in its full self-driving (FSD) solution despite its robotaxi event in October failing to live up to elevated expectations. Subsequently, however, Elon Musk's close alignment with Trump has positioned Tesla as a post-election winner driving strong performance.

DeepSeek and AI Developments

The big news in technology in January 2025 was Chinese AI developer DeepSeek's latest R1 model release which sent shockwaves through the AI industry. The severity of the correction in AI infrastructure-exposed stocks reflected the gains DeepSeek made, as well as a lack of 'pushback' by executives at OpenAI, NVIDIA, Microsoft and Meta to the algorithmic advancements DeepSeek disclosed. In addition, the fact that a model near parity with GPT-4o came from an unfamiliar Chinese entity and was released 'open source' brought additional challenges to the prevailing narrative that Western AI labs and the hyperscalers were leading the AI race. The magnitude of profit-taking was also likely exacerbated by strong year-to-date returns in AI infrastructure stocks, the earlier Stargate announcement and extended investor positioning.

Fortunately, stocks rebounded sharply as deeper evaluation suggested the impact may not be as stark as first appreciated. There is still considerable ambiguity related to training cost claims. Critical R1 details such as the hardware used for training and distillation model sources (likely OpenAI's GPT-4/Meta's Llama) remain undisclosed and research provider SemiAnalysis has suggested that the \$6m is a 'very narrow portion of the total cost' and should be seen in the context of >\$500m in overall GPU investments, \$1.3bn in total server capex and >\$700m in operational costs. Training costs also seems to ignore distillation, a means of extracting understanding from another model, from Meta LLAMA and/or OpenAI models in the training process if proven.

Despite these uncertainties, DeepSeek appears to have brought significant innovations to both pre-training and inference, especially in terms of the efficiency of NVIDIA GPU and memory usage closer to the 'bare metal' than NVIDIA's CUDA software layer – apparently allowing them to achieve significant performance gains. DeepSeek also used a reinforcement learning-only approach for post-training (i.e. no human feedback or supervised fine-tuning) and found efficiencies in memory usage and a number of other areas.

Where the advancements and performance claims seem strongest is on the inference side and DeepSeek R1 (hosted in US/EU) is now available on Microsoft, Amazon and Perplexity among others. Meta CEO Mark Zuckerberg cited "a number of novel things they did" including "advances that we hope to implement in our own systems". Satya Nadella, CEO at Microsoft, added: "DeepSeek had some real innovations" and "as AI becomes more efficient and accessible... we see exponentially more demand". Even Sam Altman, CEO of OpenAI, acknowledged "It's a very good model" before adding "We will produce better models, but we maintain less of a lead than we did in previous years".

Elsewhere, at least for now, training of the largest frontier models will continue at pace with hyperscaler capex apparently unaffected as these companies race towards AGI (artificial general intelligence). Zuckerberg pre-announced Meta's capex plans for 2025 (\$60–65bn), a forecast well ahead of expectations, fully aware of the R1 model. The same week, OpenAI announced the \$500bn Stargate project, with \$100bn to be deployed 'immediately', which implicitly assumes AI progress will remain dependent on more capital and compute. Alphabet also raised its full-year capex expectations to \$75bn (up 43% y/y), well above the \$58bn expected. Microsoft confirmed plans to spend c\$80bn largely on cloud and AI-enabled data centres and China's own five-year AI plan calls for \$137bn in capex. In aggregate, Bank of America estimate that aggregate capex estimates for Microsoft, Amazon, Alphabet and Meta were revised up by \$50bn (up 17%) for this year following the DeepSeek news.

Fund Activity

The year started with over 80% of the Fund invested in AI enablers and beneficiaries (primarily semiconductors, semiconductor equipment and cloud infrastructure providers). Strong results from NVIDIA and its ecosystem, together with material hikes in hyperscaler capex, served to crowd out almost everything else, resulting in an even narrower market in the first half, in contrast to the widely anticipated broadening. Exposure to AI enablers and beneficiaries was increased in the Fund, adding several new stocks (Amphenol; Teradyne; Applied Materials; First Solar; Confluent; Tokyo Electron; Varonis Systems; Lotes; Kingslide; Marvell; Infineon Technologies) while also finding interesting ideas outside the immediate purview of AI (Tencent; Spotify Technology; TDK; Nutanix).

As the year progressed, the lack of cyclical recovery in non-AI end markets became evident, which when coupled with China export controls (and later the demise of Intel) created a very difficult backdrop for semiconductor equipment companies. Exposure was reduced substantially, exiting several holdings including BE Semiconductor Industries, Kokusai Electric, Tokyo Electron and Applied Materials.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Global Technology Fund continued

Fund Activity continued

Software and IT services remained challenging as tight IT budgets, exacerbated by competition with AI projects, and high rates continued to pressure end demand for most vendors. The Fund's weighting was reduced further, exiting Globant, JFrog, Worday, Adobe and Confluent among others. Proceeds were reinvested into a number of new stocks that either have an interesting AI angle or idiosyncratic drivers such as AppLovin, Reddit, Astera Labs and Credo.

Following the Republican clean sweep in the US presidential elections in November, we shifted more decisively away from Asia in favour of the US. Having already reduced exposure to China to a minimum in 2023, the focus was on reducing exposure to Taiwan and Japan, retaining only our highest conviction stocks in these regions (we exited Elite Materials, Harmonic Drive Systems and Kingslide). Proceeds were redeployed into AI enablers and beneficiaries in the US as well as several domestic assets with SMB (small and medium-sized business) exposure that could benefit from likely pro-business policies from the new administration (such as Robinhood Markets, Twilio, Toast and Zillow Group). The US weighting has risen to 77.1% of the Fund, close to a more neutral US weighting relative to our benchmark following the election, as pro-US tailwinds are likely to persist for now. This came primarily at the expense of Asia (from 12% to 10.8% of the Fund) and Japan (5.9% to 2.9%) where we had been overweight previously due to investments in the AI semiconductor supply chain. Cash was 3.4% at year-end versus 4.5% a year before. We held out of the money Nasdaq Put options at year-end with c43bps premium invested.

Electronic components remain the Fund's biggest relative sector overweight at 6.8% (versus 2.1% a year earlier) driven by a continued portfolio shift towards AI enablers, broadening outside the semiconductor supply chain. Internet services and infrastructure remains overweight (4.9%) as does broadband retail (2.6%). Semiconductors went from overweight to underweight over the year (from 3.5% to -1.3%) primarily due to the NVIDIA weighting having gone from 6.8% to 13.7% in the Fund's benchmark, although the absolute sector weighting remains high (26.7% versus 25.1% a year earlier).

Technology hardware, storage and peripherals is once again the biggest sector underweight at -15.3% (versus -10.3% a year earlier) as the holding in Apple was reduced further. We are more underweight systems and application software (-12.1% compared to -7.8% a year earlier) as the sector continued to underperform due to pressures on IT budgets and high interest rates.

The number of positions has gone up from 63 at the end of 2023 to 68 at the end of 2024. The top 10 holdings accounted for 45.4% of the Fund as the year closed, roughly the same as year before, but with notable differences in composition. Active share increased from 55.1% to 61.7%, driven primarily by lower weightings in Apple, Microsoft and Alphabet. NVIDIA became the top holding at 8.6% (from 6.9%), with Meta in second place at 7% (from 3.2%). TSMC's weighting increased to 4.9% (from 2.7%), while Amazon remained at a similar level (2.6% compared to 2.7% a year before).

New additions to the top 10 were Broadcom at 5.5% (0.9% in 2023), Cloudflare at 2.6% (0.5%) and Shopify at 2.3% (1.8%). Alphabet 4.9% (6.3%), Microsoft 4.2% (7.6%) and Apple 2.8% (5.7%) remain in the top 10 holdings but with lower weightings and single-stock call options on both Apple and Microsoft at year-end. AMD remains in the portfolio but is no longer in the top 10 holdings at 0.5% (5.5% in 2023). Disco (2.3% in 2023) and Samsung Electronics (2.4%) were sold during the period.

Market Outlook

While DeepSeek captured the AI headlines during the month, it may have limited impact on the road to artificial general intelligence (AGI) given the current lack of native multimodal capabilities and a short context window. In addition, DeepSeek's disruptive pricing versus existing models may be better understood as 'just' the acceleration of an existing path of rapidly declining inference costs. For instance, the cost of ChatGPT-4 level intelligence has fallen by 1,000x in the past 18 months.

Beyond DeepSeek, the pace of AI innovation remains furious as evidenced by a series of other model announcements including OpenAI's o1 and o3 reasoning models, Google Gemini 1.5 Deep Research and recent announcements of Gemini Advanced 2.0 models, as well as Open AI's Operator (a Computer-Using Agent (CUA)) and their own Deep Research offering. New AI models trained on much larger 100,000 GPU clusters are likely to be forthcoming from Meta (Llama) and xAI (Grok) in the coming months. Open AI and other US innovators are also likely accelerating their next model rollouts in response to DeepSeek.

There is considerable hardware innovation ahead too: NVIDIA's Blackwell architecture will be rolled out more widely and the company is expected to announce details of the second-generation B300 at its GPU Technology Conference in March before the new Rubin platform expected in 2026. We are confident that 2025 will prove another extraordinary year for AI innovation, even as it becomes more complex.

Meanwhile, the US economy remains in good health as consumer spending remains robust, SMB confidence is strong and the deregulatory/pro-business agenda should help support economic activity. Inflation is also (slowly) trending lower – we remain optimistic that tariffs and political developments will not derail an otherwise supportive backdrop and our base case remains a supportive backdrop for US equities and for continued AI investment.

Overall, we believe the collapsing cost of intelligence is a crucial part of the AI adoption story which can democratise AI and drive a corresponding explosion in volumes as the more efficient use of AI allows it to be put to much greater use. Indeed, Microsoft Azure's AI revenues (the vast majority of which is inference-based) have grown 11x since March 2023 even as inference costs (in dollars per million tokens) have declined 20x pre-DeepSeek.

However, volatility is a persistent feature of new technology cycles, when the innovation curve is at its steepest and both the pace of progress and scale of the opportunity are hard to define. For example, there were seven >15% corrections between 1995–98 (before the 1999 'melt-up'), while the NASDAQ gained 354% over the period (in dollar terms). The DeepSeek episode is an important reminder of this as well as the benefits of diversification (AI cannot only be about NVIDIA and related suppliers) and highlights the increasing complexity of the AI story.

The case for market broadening appears stronger too, as more companies appear able to access leading-edge AI at ever lower inference costs. It is notable that January saw the equal-weighted S&P 500 enjoy its best month versus the market-cap weighted S&P 500 since July last year (when the cooler CPI started the rotation to small-cap stocks). The equal-weighted NASDAQ 100 also significantly outperformed too. This should provide a tailwind to active management while indices remain dominated by the largest constituents.

The Magnificent Seven dominated returns in 2024 (up 67.3%), benefitting from positive earnings revisions and excitement about AI, accounting for almost 60% of the S&P 500's return. Their fortunes have diverged in 2025 and there have been early signs of market broadening with the S&P 500 excluding them up 4.8% in January, well ahead of the S&P 500's 2.8% return. They were up just 2.5% in January, with only three of the seven (Meta; Amazon; Alphabet) showing positive returns for the year to 6 February, and lagging the equal-weighted NASDAQ's 4.9%. It is too early to say whether this trend will continue, but if history is a guide, leadership changes when new cycles take hold and we believe we are well positioned to take advantage of any AI broadening.

What is clear is the pace of innovation is accelerating and dramatic progress in early 2025 should make this increasingly apparent. We expect 2025 to prove to be the year where the impact of AI becomes unavoidable and will likely shape investor returns well beyond the technology sector. The Fund remains constructively positioned, focused on delivering a diversified portfolio of AI enablers and beneficiaries with strong secular growth characteristics. That said, we continue to hold out of the money⁵ NASDAQ put options to soften the beta of the portfolio (towards that of the Dow Jones Global Technology Net Total Return Index benchmark) in an unexpected market selloff, although this was less helpful in the recent drawdown given the biggest declines were focused in AI infrastructure-exposed companies.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Healthcare Blue Chip Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned 4.0% in 2024, outperforming its benchmark, the MSCI All Country World Daily Net Total Return Health Care Index, which returned +1.1% (both figures in dollar terms).

Europe was comfortably the biggest positive contributor over the year, with a modest positive contribution from Latin America and Japan. US and Canada combined was the largest detractor, with Asia Pacific (ex-Japan) also a drag on performance.

In terms of company size, mega-cap stocks (market cap >\$100bn) were the primary driver of performance, with positive stock selection being key. Large-cap stocks (\$10bn–100bn) were also positive contributors, with positive stock selection comfortably offsetting negative allocation. Mid-cap companies (\$5bn–10bn) were a drag on performance, with negative stock selection the challenge.

On a subsector basis, stock selection was positive in pharmaceuticals, while both allocation and selection were positive in managed healthcare and healthcare services. Healthcare facilities and healthcare supplies were the biggest drags on performance, with negative stock selection offsetting positive allocations in both instances.

The biggest positive stock contributions on a relative basis came from UCB, UnitedHealth Group and Argenx. UCB's strong performance in 2024 was driven by the market's ongoing enthusiasm for the company's auto-immune therapy Bimzelx. Approved for a number of indications that affect both the skin and the joints, commercial execution was strong as were clinical updates which should support medium and long-term growth.

The positive contribution from UnitedHealth Group was driven by investment timing, having not held the stock during the first two months of the year as the market grappled with the pressure medical costs were putting on earnings. As the year progressed, however, the stock's performance turned positive with its 1Q24 financial results the catalyst.

Much like UCB, Argenx's strong performance was driven by both strong commercial execution and positive clinical news flow. On the commercial front, the key driver is a drug called Vyvgart for the treatment of two autoimmune disorders known as generalised Myasthenia Gravis (gMG) and chronic inflammatory demyelinating polyradiculoneuropathy (CIDP). The former is a chronic autoimmune disorder in which antibodies destroy the communication between nerves and muscles, resulting in weakness of the skeletal muscles, while CIDP is an autoimmune disorder whereby the body attacks the tissues that protect the nerves.

The biggest relative detractors from performance were Acadia Healthcare, Cytokinetics and Novo Nordisk.

Acadia Healthcare operates a network of behavioural health facilities in the US, an area of the market where there is high demand. The disappointing performance in 2024 follows a series of negative media reports referencing patients who have shared troubling experiences in the company's facilities. It issued a robust defence in September, highlighting the establishment of new safety committees, allocating c\$100m in technology investments and standardising clinical protocols and oversight.

For the most part, Cytokinetics delivered positive clinical news flow in 2024 with the catalyst for the selloff being the announcement of a strategic funding collaboration with Royalty Pharma to the tune of \$575m. In isolation, the news should have been received with a degree of measure, but it was the revelation that the management team will invest \$100m to run a confirmatory phase three trial, for an asset called omecamtiv mecarbil, that upset the market given the product's questionable clinical profile.

The disappointing performance from Novo Nordisk primarily reflects poor investment timing, having not held the stock for the first seven months of the financial year. The decision to invest was based on a pullback in the shares ahead of a pipeline of important news flow, primarily for key late-stage obesity asset CagriSema. While the data was positive, with weight loss of 22.7% after 68 weeks, the results fell short of elevated market expectations which were north of 25%. The negative reaction to the miss was exacerbated by a surprising revelation that Novo Nordisk introduced flexible dosing into the study, effectively allowing patients to titrate down to either control their side effects or to manage the extent of their weight loss.

Market Review

Global equity markets posted positive gains throughout most of 2024, with the main trend appearing to be a significant rotation into some of the more economically sensitive areas of the market such as information technology and communication services. The latter was further boosted by investors' increased appetite towards companies exposed to artificial intelligence.

The risk-on environment of the first six months of the year also reflected a more encouraging macroeconomic picture than initially feared, with falling inflation, resilient growth prospects and improving supply chain dynamics. The three months to the end of September suggested a slower economic environment which boosted more defensive stocks, although most of those relative gains evaporated with a 50 basis point cut from the Federal Reserve in September and fresh stimulus from China.

Turning to healthcare, on a relative basis the sector struggled and materially underperformed the broader market, as it did in 2023. Looking closely at the subsectors, areas that were exposed to increased utilisation (i.e. patient volumes) outperformed. Healthcare equipment companies benefitted from an improving demand backdrop, while offering encouraging comments on the sustainability of that momentum heading into 2025, coupled with a more constructive pricing environment. Healthcare facilities, both in hospitals and surgery centres, were also key beneficiaries of improved patient demand trends during the year. Distributors also performed well, with their steady, defensive earnings profiles making them a key pick for investors seeking shelter in a stable, non-cyclical industry.

By contrast, managed care, healthcare services and healthcare supplies all struggled. The managed care and healthcare services subsectors underperformed, with the key concern being rising medical costs in the face of rising consumption of products and services as patients and consumers gain access to care. The challenges facing the healthcare supplies subsector were more macroeconomic in nature, given the dominance of dental and ophthalmology stocks in the index.

Fund Activity

In terms of subsectors, compared to December 2023 the Fund continues to be overweight biotechnology, healthcare equipment and healthcare supplies. We remain constructive on biotechnology given the subsector's better understanding of human biology, the pace of innovation and a new raft of commercialised assets that are focused on high unmet medical needs. We believe these attributes should ultimately drive value creation for shareholders.

Healthcare equipment and supplies should experience favourable conditions in 2025 as demand remains elevated and the pricing environment also appears to be more favourable than historically. In terms of the most significant changes compared to December 2023, the Fund no longer has a relative overweight in healthcare facilities, with the decision to reduce exposure based on performance and valuations. The Fund continues to be underweight pharmaceuticals relative to the benchmark, although this difference is somewhat reduced versus December 2023.

Market Outlook

On a relative basis, healthcare has struggled for the past two years, ending 2024 very much out-of-favour as illustrated by exchange-traded fund outflows and depressed valuations. In addition, the US political situation created further short-term uncertainty following a Republican election clean sweep and confirmation that Donald Trump would be the next US president. In isolation, this was not hugely disconcerting for the healthcare industry but when Trump announced Robert F Kennedy Jr (RFK Jr) as his nominee to run the Department of Health and Human Services, he introduced a greater level of uncertainty for healthcare investors given some of RFK Jr's public comments on vaccines, especially COVID-19 vaccines, and fluoride in water. Expect further headlines and volatility, including the nomination process, but material legislative changes are unlikely which should shift the market's focus to the industry's strong fundamentals.

Healthcare continues to develop groundbreaking innovations, is adopting cutting-edge technologies and is operating in an environment where the demand for products and services remains very strong. All of this adds up to a sector that could deliver market-leading earnings growth in 2025.

Healthcare Discovery Fund

Fund Performance

2024 was hard going for healthcare investors. The sector underperformed the broader market on both an absolute and relative basis and we certainly had our own set of challenges heading into the final quarter. The Fund (Class I US Dollar Accumulation Shares) fell by 5.4% over the year versus a return of 1.6% from our benchmark, the MSCI World Small Cap Health Care Net Total Return Index.

Much of the contribution to negative performance came late in the year. We were trading in line with the benchmark until September, when 10-year Treasury yields began to march higher on fewer interest rate cuts than the market previously expected. This, in conjunction with several of our larger positions experiencing negative turns of events, all further exaggerated by very poor healthcare sentiment, conspired to produce a significant drag on performance as we closed out the year. On a brighter note, the portfolio saw two bids for holdings, Shockwave Medical by Johnson & Johnson and Longboard Pharmaceuticals by Lundbeck, which were both in our top five relative contributors to performance over the year.

Market-cap allocation was not the issue, other than some detractor for mid-cap stocks (>\$5bn–10bn) though we made up for it with our mid-cap selection which was very good. Having said that, our small-cap (>\$1bn–5bn) allocation cost us dearly despite very good micro-cap (>\$1bn) selection. Large-cap selection (>\$10bn), while not positive, was not the chief detractor in selection and our allocation there helped to offset the negative effect.

North America and Japan were our chief regional detractors, driven by the stock-specific woes outlined below. Asia Pacific (ex-Japan) and the Middle East and Africa were regional bright spots. Subsector performance also mirrored our stock challenges over the period, with healthcare facilities and healthcare technology our greatest detractors, in that order, whereas pharmaceuticals and managed care provided a better selection effect. Outside healthcare equipment, allocation was near neutral to positive across subsector attribution.

Further to the selection give and take, Zealand Pharma continued to build on successful clinical data and Arcutis Biotherapeutics built on label expansion along with commercial execution. Insmed also benefited from positive clinical data for its lead and other pipeline programs and, coupled with our positioning over the year, added to the positive side of the ledger. Molecular diagnostics company Natera continued to raise its profile in minimal residual cancer (MRD) testing and our significant overweight position contributed positively to the Fund's performance. As noted, merger and acquisition activity (M&A) added the icing on the cake.

Having said all of the above, it was not enough to sugarcoat the detractors and we could have done better to soften the blow. Amvis Holdings, a Japanese hospice company, was a chief pain point. While we did reduce our position ahead of the company's results, exiting completely would have been the better course of action as the outlook for the business was more disappointing than had been priced into the stock for margin expectations in 2025. It is now an even smaller position and we are reviewing the course correction from here.

Medical device company, iRhythm Technologies, had a more demanding year than expected given its reorganisation and reboot. The company was under immense pressure from investor angst in the second half of the year as a result of both earnings and regulatory worries. We therefore reduced our large, outsized position ahead of the company's Q3 results and against the backdrop of further regulatory scrutiny only to see a much better outcome on both in short order which negatively impacted performance. Although the turnaround efforts of the company were much more of a rollercoaster over the year than we had envisaged, iRhythm Technologies remains an overweight position in the Fund and we believe it is much better positioned to outperform from here.

Finally, Acadia Healthcare, a mental health provider, was hit by an investigative report by journalists on the quality of care being administered at select facilities. While we appreciate the concerns raised, we have previously seen this for a predecessor company as well as other providers in this area. We are not making excuses for companies, but this area of care has an extremely difficult patient population, where clinical resource is limited. In addition, Acadia Healthcare and others are highly regulated by accreditation agencies and other bodies, and recent inspections have not identified grounds for concern. As it happens, we had reduced our holding in the company where previously it had been a top 10 position for the Fund. While the management team has done a good job of being transparent and forthcoming with data to lend perspective, the timing relative to other stock events could not have been worse. Meanwhile, the US mental health crisis continues unabated with an inadequate supply of facilities and clinical care resources to meet demand.

Market Review

From a top-down perspective, 2024 was a tale primarily of interest rate ambiguity and new US federal administration uncertainty. The year began with a renewed sense of optimism on the basis that the US Federal Reserve may cut interest rates. This helped spur investor interest, including among generalist investors, in the healthcare sector, as well as in those companies further down the market-cap spectrum. The hope that had reversed by April returned in May, 10-year Treasury yields began to relent and, while volatile, the downward trajectory once again saw longer-duration areas of the market lead the charge as we headed into September. However, by the middle of that month interest rate expectations again reversed denting the prospects for smaller healthcare companies.

Markets had much to contend with in November and despite a clean and clear US election result, concerns about the new administration (worries around inflationary tariffs) soon flared. For healthcare investors, the proposed US healthcare appointments raised many eyebrows, to say the least. Increasingly, Christmas looked to be off the cards as markets lost steam and healthcare certainly saw a significant clawing back of performance. Regardless of continued innovation in the sector, particularly in biotechnology, macroeconomic movements once again simply carried more weight.

Despite the challenges for healthcare overall in Q4, some areas did better than others. On the happier side for smaller healthcare companies were pharmaceuticals, healthcare equipment and healthcare facilities. The picture for large-cap companies was not much different, although healthcare distributors topped the list of relative performance contributions. On the weaker side, healthcare supplies, healthcare services, life sciences tools and services and biotechnology had more of a struggle. Again, it was not too different further up the market-cap scale other than managed care being a chief pain point for large-cap companies – smaller-cap healthcare indices do not have the same constituent representations.

With so much up and down across the subsectors there was plenty of opportunity within each, but the uncertainty also contributed to internal rotations across the market and increasing complexity in trading conditions. Clearly, interest rate expectations and the US presidential election outcome played their part in much of the healthcare back and forth over much of the year.

Further on US politics, we mostly predicted events correctly though we were too naïve in our thinking regarding what a Republican administration might imply for the sector. While it is true that Trump has bigger agenda priorities than healthcare, he will need to find the means to fund them. Investors across the board will need to remain mindful of this, but at this juncture we would argue that a great deal has been priced in already although very little is actually known.

Fund Activity

In addition to the portfolio management decisions set out above, we were active in biotechnology, being ahead of data events (Bicycle Therapeutics; Celldex Therapeutics) as well as following them where applicable (Insmid). We also worked to take advantage of volatility, topping up and crystallising some gains in large overweight positions – Blueprint Medicines and Agios Pharmaceuticals are examples of the former and Arcutis Biotherapeutics, Natera and Zealand Pharma the latter. We had participated in fund raises in the first half of the year following supportive data, driving performance for both Arcutis Biotherapeutics and Longboard Pharmaceuticals.

Having done well with our investment in the company, we reduced and later exited Spanish pharmaceutical firm Laboratorios Farmaceuticos Rovi, more on concern that the outcome of the strategic review for its contract development and manufacturing organisation (CDMO) business may not meet – much less exceed – market expectations. Proceeds from the Longboard Pharmaceuticals (neurology) bid were repurposed into building out our initial position in the acquirer, Lundbeck, which also has neurology interests.

A new holding was initiated in AdaptHealth, a durable medical equipment distributor focused on diabetes mellitus and respiratory areas, which is undergoing a management turnaround. We exited a small position in dermatology diagnostic company Castle Biosciences on a changing reimbursement landscape and reduced life sciences tools exposure by exiting both Fortrea Holdings, a clinical research organisation, and Gerresheimer, a manufacturer of contract packaging.

Having been underweight medical equipment at the mid-year point, we later closed that out, topping up existing holding Penumbra and adding a new position in Inari Medical, also a vascular medical equipment company. In addition, we initiated a small position in Masimo, a respiratory medical equipment and technology company, and continued to build the position over the year as the management turnaround continued to make good progress. We also added to medical supplies company Integer Holdings.

We re-initiated our position in Addus HomeCare as negative reimbursement risks became clearer and, if they come to pass, manageable. We took some profit in healthcare savings account company HealthEquity, which is often linked to rate movements, having enjoyed a supportive rate environment and a valuation running ahead of likely solid upcoming Q3 results.

Healthcare Discovery Fund continued

Market Outlook

It was a frustrating year for healthcare investors, despite continued fundamental progress. Investors were more intrigued by other parts of the market as record outflows attest. Small-cap companies have broadly been able to close some of the gap to large-cap ones although it has been extremely challenging to sustain relative outperformance with the on-again/off-again rate policy dynamic for longer-duration areas. The bottom line is that there has been better growth on offer elsewhere which has hampered the healthcare sector regardless of company size.

Several of the healthcare leadership nominations floated by the incoming US administration lent further investor pause, though we would suggest the market is pricing in much more, in both directions, than could possibly be known. Previously, many would not have been able to name the most recent Secretary of Health and Human Services, much less predict the potential impact of such a role and its ability to make radical changes. Looking to past performance following new Republican administrations, healthcare stocks outperformed the S&P 500 Index in the first year of every Republican White House since Reagan in 1981. History only gives an indication but when there is a lack of clarity it is typical for markets to tend to price in the potential earnings cuts beforehand. Stocks then benefit when the extreme scenario does not materialise.

As for the newly formed Department of Government Efficiency (DOGE), any efficiency applied to government would be a positive in our book. Having said that, when it comes to the Food and Drugs Administration, which is one of the more important for industry innovation, we would argue the agency is more efficient than most and suggest there are bigger government fish to fry where maximising impact is concerned. The US leads the world when it comes to medical innovation, something any administration would not be willing to cede readily, not to mention other highly attractive local attributes the industry offers – high quality jobs and national security being top of the list.

We are looking to take advantage of market disconnects and would encourage investors to do the same. Should growth continue to slow, not to mention the policies the new administration rode into power with, there may be a more favourable macroeconomic environment for healthcare investors ahead. A revisit of the sector at least is perhaps timely, potentially moving some relative outperformance into those areas that have done less well and where current valuations and fundamentals suggest an attractive risk/reward.

Both sector fund flows and valuations attest to oversold conditions and, relative to the broader disconnect between large and small-cap stocks, the top five companies in the S&P 500 Index are now nearly 5x the size of the entire Russell 2000 Index (small-cap stocks) and trade at a far higher price to sales ratio than smaller companies.

Furthermore, looking at stock-specific prospects, the coming year has several therapeutic innovation areas in focus: obesity; Alzheimer's disease; genetic medicine; neurology; immunology and inflammation; oncology; HIV pre-exposure prophylaxis; cardiovascular; vaccines. Last, M&A activity had stalled under the Biden administration so with a leadership change we would expect to see some pickup in the new year.

What is much harder to call is the catalyst for a change in the equity market's view of relative opportunities on offer. Some defensive positioning may well be on the cards for 2025. If history is any kind of guide, the average annual return for the S&P 500 Index is a modest 6.7% when it follows consecutive yearly gains of more than 20%. We are not suggesting a market collapse but rather that it may make sense to add some defensiveness to portfolios for the year ahead.

This is not the 2024 result we diligently pursued for the Fund and our disappointment weighs heavily. Even so, we remain convinced of the investment opportunities for small-cap healthcare investors and within that in our ability to repair performance accordingly.

Polar Capital LLP

January 2025

Healthcare Opportunities Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned 5.9% during 2024 versus 1.1% for the MSCI All Country World Daily Total Return Net Health Care Index. The MSCI All Country World Index returned 15.7% over the same period (all figures in US dollar terms).

The healthcare sector underperformed in 2024 driven in large part by the strength in US markets, which saw the technology sector strongly outperform, thanks mainly to the 'Magnificent Seven' which dominated returns once again.

None of the different subsectors were able to match the US market in terms of returns last year, though there was strength from healthcare equipment and healthcare distributors. Significant underperformance was seen from managed healthcare and healthcare services, with elevated utilisation driving the pressure. As always, there were significant opportunities in stock selection, with new product cycles driving outperformance for individual companies.

In terms of attribution, from a market-capitalisation perspective allocation was a slight negative while the overweight positioning in mid-cap stocks was a positive, offset by the overweight in small-cap companies. Stock selection was highly positive for large-cap holdings but negative for mid-cap ones. Looking at geographical performance, allocation was negative in terms of its larger exposure to Europe and lower exposure to the US compared to the benchmark. However, again stock selection was strong, particularly in Europe and Asia Pacific ex-Japan. Stock selection was a struggle in the US and particularly in Japan, where mid-cap growth stocks noticeably underperformed.

Finally for subsector attribution, allocation and stock selection were both positive. The underweight positioning in managed care and being overweight healthcare facilities was a positive for the Fund due to elevated utilisation throughout the year. On the negative side, an underweight to healthcare equipment and pharmaceutical stocks was a detractor to performance. Stock selection was positive in biotechnology, healthcare equipment and pharmaceuticals but negative in healthcare distributors, technology and facilities.

The top positive relative contributors to the Fund were Zealand Pharma, UCB and Argenx. Zealand Pharma was strong on the back of positive obesity data from an early-stage trial which was received well by investors. UCB outperformed thanks to its commercial execution which raised hopes for growth in the years ahead. Argenx also did a great job commercially and raised excitement around its pipeline.

The top relative detractors were Amvis Holdings, Cytokinetics and Celldex Therapeutics. Amvis Holdings significantly underperformed due to very weak margin guidance as the company looked to increase costs. Cytokinetics struggled after beginning the year with a strong move higher on speculation the company was being acquired. Celldex Therapeutics was weak on safety concerns from clinical data on its lead development candidate.

Market Review

Markets were very strong again in 2024, but the majority of this strength came from the US and within that the significant outperformance by the 'Magnificent Seven' drove the vast majority of returns. Drivers for markets included, at different points, faster economic growth than expected, then concerns of slower growth, followed by stimulus through monetary means, slowing inflation, election results and bond market volatility which all proved to be challenges that investors had to decipher throughout the year.

The first quarter was mostly a continuation from Q4 2023, with strong markets and a suggestion of slightly slower growth. However, by mid-March economic data again suggested the US economy was growing faster than expected pressuring bonds and tightening financial conditions. By July, concerns over slowing growth again became more significant as employment data suggested a proper weakening in the outlook which led to the pessimists suggesting imminent recession and doom for the US. To show how topsy-turvy the year was, by mid-September markets perked up, driven by the 50 basis point interest rate cut from the US Federal Reserve and significant stimulus starting in China. Suddenly, job data in the US reversed and improved and thus rates moved higher on strong macro conditions again. The US presidential election took place in November and the result raised optimism for the US economic outlook but also fears for broader global markets around tariffs, etc – whatever happens under the new regime, it will likely be volatile.

For healthcare, the sector started the year well but suffered in mid-March with stronger US economic data driving flows into other sectors. That pressure continued until July when economic data surprised to the downside, causing a significant relative underperformance period for healthcare stocks until mid-September when the US Federal Reserve cut rates and China announced more substantial efforts around stimulus. This again led to more focus on cyclical areas of the market at the expense of healthcare stocks.

To exacerbate the pressure on healthcare stocks, President Trump announced his nomination of Robert F Kennedy Jr as the head of the US Department for Health and Human Services (HHS), essentially the head of government-funded healthcare. Investors reacted negatively to this news and the sector was very weak in November and December, resulting in healthcare underperforming significantly for two years in a row.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Healthcare Opportunities Fund continued

Fund Activity

The first quarter for the Fund led to some significant changes in positioning. Turnover then slowed, resulting in fairly similar activity to the previous year. On the financing front, the Fund supported two notable raises, one for Establishment Lab Holdings ahead of its key product launches in the US and China, and the other the IPO of Galderma Group which proved very successful.

Other new positions included MedinCell, UCB, Integer Holdings, Asahi Intecc and 4D Molecular Therapeutics. To fund the new positions, sales were made in Astellas Pharma, Indivior, Legend Biotech, Addus HomeCare, Concord Biotech and Penumbra. The sale of Concord Biotech followed our participation in its IPO in the previous year which generated a strong return for the Fund. Also, the position in Zealand Pharma was reduced after a significant move higher following positive clinical data.

The second quarter also included participation in several financings for the Fund. Merus and Avidity Biosciences both raised investment for pipeline development and so new positions in these two biotechnology companies were established and increased over the year. The position in Cytokinetics was also increased through a financing which led to share price weakness as some investors were still believers in the company being acquired in the shorter term, a thesis ruined by the raise. Other new holdings on the biotechnology side included Jasper Therapeutics and PepGen.

On the selling side, Redx Pharma was sold ahead of the company being delisted from the UK market as the company felt it was better for future financings to move to being a private company. The position in Zealand Pharma was further reduced following more positive news flow and its own good performance.

In the third quarter, Avidity Biosciences announced another financing so we increased our holding in the Fund. The raise was announced on the back of much better than expected clinical data for the company. Two other new holdings were Sandoz Group and Vaxcyte, the former a generics company with strong growth potential through biosimilars and the latter due to the potential of its vaccine portfolio.

Sales during the quarter included Regeneron Pharmaceuticals, Neurocrine Biosciences and McKesson, all three having significantly outperformed the sector over the periods they were held. Revance Therapeutics was also sold after the announcement of an agreed bid for the company, although the final exit price was a real disappointment and much lower than the highs of the company's stock back in early 2023. Positions in Medanta and Moonlake Immunotherapeutics were also sold.

For the fourth quarter, activity was much lower, with new positions added including Lundbeck and Globus Medical. H Lundbeck was added based on its valuation and the long-term pipeline potential for the company, while Globus Medical was purchased following recent commercial execution that surpassed consensus expectations. Sales included HCA Healthcare and Galderma Group following significant outperformance, and 4D Molecular Therapeutics and Celldex Therapeutics after both companies faced challenges.

Market Outlook

At the beginning of 2024, the outlook for healthcare seemed compelling, with fundamental drivers in a good place and return potential looking decent for the sector. However, frustratingly performance of healthcare stocks as a whole did not match that optimism for a variety of reasons, as highlighted earlier. For 2025, the outlook for the sector again appears to be compelling.

Attempting to be objective and taking a step back, the sector trades at discounted valuations in an absolute and relative sense compared to long-term historical data. The sector is forecast to grow earnings at 19% for the year, driven by robust fundamentals of utilisation and new product cycles. Lastly, sentiment is poor and signalling a contrarian buy signal, as highlighted by the current trend in ETF flows.

So what makes the sector work in 2025? First, on the macroeconomic outlook the US economy is critical and its strength has been a headwind for healthcare. If growth stays steady or slows, it should be tailwind for large and mega-cap healthcare companies. For small and mid-cap stocks, an easing of financial conditions would be supportive and if inflation follows its trend path lower, this should happen. Second, current absolute and relative multiples for healthcare stocks paint a picture of elevated political risks. From here, if the worst-case scenarios over the US political outlook that are reflected in current multiples are not realised, it could lead to significant multiple expansion and outperformance from healthcare.

Polar Capital LLP

January 2025

Japan Value Fund

Fund Performance

In 2024, the Fund (Class S Japanese Yen Shares) rose 19.5% versus a 20.5% increase in the benchmark, the TOPIX Total Return Index (both figures in yen terms).

The Fund's slight underperformance versus the benchmark was primarily due to its strategic overweight to small companies. Large companies, particularly those in the TOPIX 100, once again significantly outperformed small and midcap stocks. The Fund's strategic bias to smaller companies resulted in a 4.8% relative impact. However, stock selection was exceptionally strong, especially in both large and small companies, which helped offset much of the headwind.

The largest contributors to relative performance were Mitsubishi UFJ Financial Group (MUFG) and Sumitomo Mitsui Financial Group (SMFG). Both major banks outperformed as investors began pricing in a prolonged period of elevated global interest rates which supported the broader financial sector. Throughout 2024 many investors priced in the start of Japan's tightening cycle (of interest rate hikes), which officially began in April 2024, driving strong outperformance in banks and other financial stocks as expectations for further policy shifts increased. The Fund reduced its exposure to financials, including MUFG and SMFG, during the summer as the stocks approached our internal valuation targets following a period of sustained gains. However, we increased our positions again in late summer, seizing the opportunity presented by the August market downturn to re-enter at highly attractive valuations, capitalising on renewed upside potential.

The largest detractors from relative performance were Rohm and Iriso Electronics. Rohm was added to the portfolio in December 2023 as we believed the cyclical downturn in its semiconductor-related business – which had significantly depressed the share price – was already fully reflected in valuations. However, the downturn proved to be more severe than either the company or the market had anticipated, leading to further declines and new relative lows. Despite these short-term challenges, we remain confident in Rohm's long-term prospects. The company is well positioned to benefit from the growing adoption of electric and hybrid vehicles as well as the broader electrification trend within the automotive industry. Its silicon carbide (SiC) business continues to gain momentum, with strong order growth expected for the fiscal year ending in March 2025 and beyond. Given the company's attractive valuation, we are optimistic that its earnings potential in these emerging growth areas will be increasingly recognised over the medium term, driving a meaningful recovery in the share price.

Iriso Electronics, a leading manufacturer of automotive connectors, faced similar headwinds to Rohm. The ongoing cyclical downturn and a larger-than-expected inventory buildup weighed on performance, pushing the stock to new lows. However, we continue to see significant long-term value in the business, given its strong positioning in the automotive sector and its exposure to the structural trends of electrification and connectivity. We believe the current valuation does not fully reflect these opportunities and we remain optimistic about a recovery as industry conditions stabilise.

Market Review

In 2024, the market once again delivered exceptionally strong performance in yen terms. Gains were largely concentrated in the first quarter, driven by foreign investors allocating fresh capital to Japan. This was followed by a period of range-bound trading as investors searched for new catalysts to push the market higher.

A key development was the apparent end of Japan's long battle with deflation, marked by a multi-decade high wage increase agreed at the annual shunto negotiations. In response, the Bank of Japan (BoJ) significantly shifted its monetary policy – abolishing its negative interest rate policy in March, implementing another rate hike in August and setting expectations for further hikes and quantitative tightening in early 2025. Meanwhile, the 'higher for longer' interest rate theme in the US led to a further significant depreciation of the yen, one of the two primary market drivers.

The yen's weakness has undoubtedly benefited corporate Japan, though the impact has been most pronounced in large-cap stocks. While approximately one-third of TOPIX revenues come from overseas markets, this exposure varies considerably by market segment. The TOPIX 100 derives 46% of its revenues from abroad, compared to 29% for the TOPIX Mid 400 and just 15% for the TOPIX Small indices. The influence of currency movements is evident in recent market performance: over the past two years, the TOPIX 100 – most sensitive to exchange rate fluctuations – has gained 61%, while the TOPIX Mid 400 and TOPIX Small indices have returned 42% each.

The second key driver of market performance in 2024 was the ongoing push for corporate governance reform. A majority of companies announced capital improvement plans during the year, focusing on enhanced shareholder returns and increased growth investment. Since early 2023, the Tokyo Stock Exchange's initiative to improve capital efficiency has played a major role in driving returns. Encouraging signs of progress include improved operational efficiency, higher yields and reinforced corporate accountability. At a market level, share buybacks nearly doubled year on year – an increase that was far from an anomaly, given 2023 had already seen buybacks at historic highs.

On the political front, Prime Minister Fumio Kishida stepped down after record low approval ratings left him with little choice. His successor, Prime Minister Shigeru Ishiba, faced an immediate challenge, receiving no honeymoon period as public dissatisfaction over inflation and a scandal involving the ruling Liberal Democratic Party dominated the election. While the situation has since stabilised and investors appear largely unconcerned, it remains uncertain whether Ishiba will still be in office for the upper house elections in the summer.

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Japan Value Fund continued

Fund Activity

The portfolio strategy remained consistent throughout 2024, with new purchases focused on areas where we identified a mismatch between the quality of the underlying business and its share price performance. Alongside our long-term strategy of capitalising on Japan's corporate governance reforms, several short-term themes emerged during the year.

Many of the new additions were in the traditional technology and transport sectors, where inventory cycles and cyclical downturns created attractive opportunities. There was an increase in the number of initial public offerings (IPOs) during the fourth quarter, with many coming at attractive valuation levels. The Fund capitalised on this by participating in three of them, including Kuroda Group and Tokyo Metro.

Significant new purchases over the second half of the year (please refer to the Polar Capital Funds plc Interim Report & Accounts, for the six months to 30 June 2024, for a discussion of significant purchases in the first half) included:

Nissan Shatai: We initiated a position in Nissan Shatai, a listed subsidiary of Nissan Motor Corporation. The company operates two production plants for Nissan but has struggled with low capacity utilisation in recent years. Given its capital ties and operational dependence on Nissan Motor, we believe its current listed structure presents a significant conflict of interest between the parent company and minority shareholders. With corporate governance reforms discouraging listed subsidiaries and a high-profile activist fund on the shareholder register, we anticipate a restructuring of its capital structure, with full consolidation by Nissan being the most probable outcome.

Seven & I Holdings: We took a position in Seven & I Holdings, Japan's leading convenience store operator, after a sharp share price decline following its first half earnings. While near-term earnings momentum is weak, we are encouraged by the structural changes management is implementing, particularly their renewed focus on the convenience store business. We saw the recent price weakness as an attractive entry point.

MUFG: After selling MUFG in July, we reinitiated a position in early August as market turmoil saw its share price drop over 30% from July's highs. While the BoJ's next rate hike may be delayed due to recent market volatility, we remain confident that monetary policy normalisation will continue over the next 12 months.

Tokyo Metro: We participated in the IPO of Tokyo Metro, the city's leading railway operator. The company's core transport business is highly profitable, benefiting from population growth and rising inbound tourism. Management also has scope to expand its non-railway businesses. The IPO was priced attractively relative to its peers and saw strong market demand. However, as the share price quickly exceeded our fair value target, we exited the position.

Sumco: A new holding was initiated in Sumco, a leading semiconductor wafer manufacturer, following a research meeting with company management. The stock had been under pressure due to the cyclical downturn in the industry and the impact of increased depreciation expenses on profitability. However, with valuations approaching cyclical lows we saw an opportunity to build a position despite near-term challenges.

Solasto: We initiated a position in Solasto, a provider of contract services for medical institutions and elderly nursing care. Management has shifted its strategy from prioritising revenue growth to focusing on profitability, a change we believe is not yet fully appreciated by the market. Taking advantage of recent share price weakness, we established a holding.

Murata Manufacturing: We added Murata Manufacturing, a global leader in electronic components, on valuation grounds. The prolonged inventory adjustment across the technology sector post-pandemic has driven relative valuations to their lowest levels in over a decade. Our investment thesis assumes that a recovery in component demand will support a valuation rerating. Additionally, the company's mid-term plan highlighted enhanced shareholder returns and long-term opportunities in AI adoption.

Ibiden: We initiated a position in Ibiden, a leading manufacturer of semiconductor package substrates, following a meeting with management. Historically, the company relied heavily on Intel, but the rise of AI has enabled it to diversify, with NVIDIA-related sales now of similar scale. While the surge in demand initially boosted sentiment, significant capital expenditure led to a sharp cut in short-term earnings forecasts. With the share price having more than halved from its 2023 highs, we see a compelling medium to long-term growth opportunity.

Kuroda Group: We participated in the IPO of Kuroda Group, a small-cap electronics wholesaler. Previously listed in Japan, the company returned to the market after a period of private ownership. The investment case was based purely on valuation, as it debuted at a discount to peers with an unusually high dividend yield. The valuation anomaly corrected quickly post-listing, and we exited the position on reaching our target price.

The purchases have been funded by sales in MUFG Group, TS Tech, Nichias, Square Enix Holdings, Aeon Delight, Pasco, Rezil, Nikon, Anest Iwata, Aida Engineering, Kyocera, Shin-etsu Polymer, Arealink, Skymark Airlines and Tokai.

Market Outlook

The outlook for global equities remains uncertain, clouded by speculation surrounding potential policy actions from the incoming Trump administration and increasing ambiguity over the direction of US interest rates. US equities have delivered exceptional returns since the market lows of October 2022, driven largely by a handful of mega-cap stocks. As a result, overall index valuations now appear elevated relative to historical norms. Furthermore, investor positioning in US equities versus the rest of the world looks stretched, following two consecutive years of 20%+ returns.

The Japanese equity market has also posted strong returns over the past two years, in local currency terms. While its performance trailed that of the US – fuelled by the recent AI-driven boom – it significantly outpaced other developed markets. The rally has been underpinned by two key forces: a weakening yen and a continued wave of corporate reform. Each has influenced the market in distinct ways and the key question now is how these dynamics will evolve in the years ahead.

Further reforms are on the horizon. Since its announcement in 2023, the Tokyo Stock Exchange has been actively considering its next steps, engaging with us and other investors throughout this period. We anticipate upcoming policies placing additional pressure on corporations, particularly regarding management buyouts (MBOs) and parent/child listings. These measures have the potential to accelerate the pace of reform even further, unlocking greater value for shareholders and reinforcing Japan's transition towards a more dynamic and globally competitive market.

Looking ahead to 2025 and beyond, we believe the yen remains significantly undervalued at current levels. While we remain confident that it will ultimately find its natural equilibrium over the long term, the short-term outlook is less certain.

Our overall portfolio strategy remains largely unchanged, with a continued preference for small and mid-cap stocks. We remain optimistic that this segment will re-rate as management teams increasingly embrace shareholder-friendly capital allocation policies. While currency fluctuations may impact broader market levels, the effect on small and mid-cap stocks is far less pronounced. Instead, we expect improved capital efficiency and stronger corporate governance to be the key drivers of returns.

January 2025

Investment Managers' Reports continued

For the financial year ended 31 December 2024

North American Fund

Fund Performance

The Fund (Class I US Dollar Distribution Shares) rose 18.2% during 2024. This came against a backdrop of robust American equities markets. As has been a feature of US markets recently, the outstanding performance of a handful of formidable mega-cap technology stocks led to even better returns from market cap-weighted benchmarks in 2024, making it tough for investors with a genuine active, multi-cap approach to keep up with market cap-weighted benchmarks. To wit, the Fund's benchmark, the MSCI North America Net Total Return Index, recorded a 24.0% return, while the equally-weighted equivalent index rose 13.8% (all figures in dollar terms).

The fundamental progress of the companies in the portfolio has, for the most part, been pleasing and this has contributed to the bulk of the Fund's strong absolute returns across the year.

Significant positive contributions to relative performance over the year came from Interactive Brokers Group (low-cost, high-technology provider of brokerage accounts), US Foods Holding (distributor of foods to restaurants), Fiserv (provider of financial processing systems and software), Fairfax Financial Holdings (Canadian insurance business) and Booking Holdings (online travel booking platform). In all cases, these businesses experienced very strong fundamental business growth.

Interactive Brokers Group saw continued strong account growth and high engagement from its customers. The company also benefitted to some degree from the shifting outlook for interest rates – we had been expecting a gradual reduction in net interest margins but this is taking longer to happen which led to a more favourable path for profits.

US Foods Holding's superior product selection, network density, reliability and technology investment enabled the company to grow revenues via share gains from smaller players in a very large but fragmented market, despite difficult industry conditions resulting from lacklustre footfall at restaurants.

Fiserv saw strong growth in its Clover payments system and continued growth in its sticky banking and wealth management processing and software businesses.

Fairfax Financial Holdings continued to benefit from solid insurance pricing trends and improving investment returns on its float and shareholder funds.

Booking Holdings fared well as the appetite for renewed travel post-Covid endured and as its investments in alternative accommodation helped gain an increasing share of that market, while the company supplemented operational growth with meaningful share repurchases.

In terms of the principal negative contributors to relative performance, despite the Fund owning positions in Amazon, Alphabet and Microsoft, a relative lack of exposure to the so-called 'Magnificent Seven' stocks meant it was difficult to keep up with the market cap-weighted index given the weighting of those stocks in the index and their extremely strong performance. US market concentration reached an all-time high over the period since 1875 – for instance, not owning NVIDIA accounted for nearly all the Fund's relative lag versus its official benchmark.

Among stocks held, the largest detractors to performance by some margin were two health insurance companies, Elevance Health and Centene. A loss of members in Medicaid (important for both companies but relatively more so for Centene) led to a mismatch in timing between insurers paying for treating members and being paid by the states for covering those members. Industry-wide mispricing in the Medicare Advantage market (more impactful for Elevance Health) hurt profitability as hospital treatments for seniors increased, following a period of Covid-curtailed hospital capacity. The election cycle and the tragic murder of an industry executive later in the year also brought uncertainty to the sector. The 'short tail' nature of health insurance (i.e. the time between the occurrence of a loss and the settlement of a claim) means pricing and profitability should reset quickly. We see attractive long-term business compounding as the companies effectively take a royalty on growing healthcare spending and as they deploy the significant cashflow they generate.

The portfolio's holdings in energy stocks, Canadian Natural Resources and Cenovus Energy, were also detractors from performance over the year, largely due to the somewhat lacklustre oil price. Cenovus Energy also performed poorly in its downstream (refining) division though we would expect profitability to recover in the medium term.

Market Review

Concerns regarding both a recession and inflation eased further during 2024, helping to support equities. Trump's return to the White House was also greeted with enthusiasm by the markets. His administration is pro-US growth and more pro-business than the previous one and has promised reduced red tape and corporate tax rates. While Trump has not historically shown much concern about addressing the fiscal deficit (and most of his intended policies would likely put further pressure on it) the new Department of Government Efficiency is a welcome step in the other direction.

On the negative side, given Trump's unpredictability and his appetite to move boldly and often without warning, he will likely increase investment tail risk. In addition, some areas of the economy are still digesting the impacts of a period of high inflation and the sea change in borrowing costs. Less affluent consumers seem to be bearing most of the brunt, with this pain showing up in patchy retail numbers, weaker low-end restaurant visits and increasing credit card delinquencies. Those with higher incomes are more insulated, but they are not unaffected. For example, the much higher cost of rolling over a long-term mortgage is putting people off moving home and existing home sales are at levels seen only during the global financial crisis.

On the whole, leading indicators of the economy do not give us much cause for concern nor are there many parts of the economy that are notably above normalised levels. The current business environment is conducive for most decent North American businesses to progress and we are upbeat about the progression of the businesses in the portfolio in the medium and long term.

Fund Activity

New stocks added to the portfolio include Open Text (software company selling products that manage and analyse structured and unstructured client data), Lowe's (home improvement retailer), SharkNinja (innovation-led consumer products company), Builders FirstSource (distributor of lumber and building products) and MasterBrand (leading manufacturer of kitchen cabinets). All fit our criteria of being expected to compound underlying business value at a double-digit rate per annum, with durable business and financial characteristics while at the same time we bought at attractive prices. In addition, Lowe's, Builders FirstSource and MasterBrand have recovery potential should housing activity improve from below normalised levels.

The Fund's composition remains very different to the benchmark, with a small and mid-cap bias given the breadth of its investment universe. The active share at the end of 2024 was 84% meaning the overlap with the benchmark index was only 16%.

We believe the Fund in aggregate saw strong growth in underlying business value last year that was notably higher than the broader benchmark, continuing a record of annualised double-digit business compounding that stretches back to its launch in November 2011. Business fundamentals drove the bulk of the Fund's return in 2024.

While the Fund saw a modest rerating in its valuation in 2024 (according to Style Analytics), the benchmark rerated to a greater extent. This marked the second year in a row of this phenomenon, helping to drive the Fund's blended valuation on a number of metrics versus the benchmark to its lowest since inception.

The attractive valuation of the Fund does not come at the expense of its fundamental appeal. For example, as has consistently been the case since inception, the portfolio converts net income into free cashflow at a much higher rate than the benchmark and has superior free cashflow margins and a strong balance sheet across a number of metrics. Looking forward, we expect the portfolio to continue to compound underlying business value at a double-digit rate, as has been the case since its launch.

For a more detailed write-up of the rationale of some of the key buys and sells, please see our investment commentaries on the Polar Capital website.

Market Outlook

The businesses in the Fund demonstrated very healthy fundamental progress in 2024, contributing to its trend of attractive compounding since November 2011. Their fundamentals and prospects are such that we expect this trend to continue over the long term and the business environment makes us optimistic about shorter-term progress too.

2024 was another year in which market concentration increased sharply, to record levels on some measures. This makes life relatively more difficult for multi-cap and active investors. It is unlikely that such a relative headwind is repeated from current lofty levels though, even if it is, we think it is important for investors to have exposure to the rich opportunities on offer in North America outside the very largest companies.

The Fund has a diversified range of businesses which taken together lead to attractive absolute and relative aggregate fundamental and valuation characteristics. Its composition is very different to that of the official benchmark. We think this is the right recipe for long-term performance and feel very good about the prospects for the Fund.

January 2025

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Smart Energy Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned 3.5% in 2024, underperforming its benchmark, the MSCI All Country World Net Total Return Index, which returned 17.5% during the same period (both figures in dollar terms).

The investment scope of the Fund includes four investment clusters. A particularly positive absolute performance contribution was delivered by the Energy Efficiency cluster, with the Energy Transmission and Distribution cluster also contributing positively. The Clean Power Generation cluster made a slight negative performance contribution and the Energy Conversion and Storage cluster made the largest negative performance contribution.

At the individual stock level, Vertiv Holdings, Marvell Technology, GE Vernova and Tesla were the strongest absolute positive contributors. The strongest negative contributions came from Wolfspeed, Renesas Electronics, SMA Solar Technology and STMicroelectronics.

Market Review

Global stock markets had a good year, driven by US mega-cap technology stocks, notably from the artificial intelligence (AI) ecosystem being propelled by NVIDIA. In addition, expectations for the US Federal Reserve (Fed) to start cutting interest rates helped overall sentiment.

In the final quarter of the year, markets were more mixed as investors assessed the outcome of the US presidential election and the potential impact on inflation and growth of import tariffs announced by the new administration. The Fed added to the overall uncertainty, with the central bank downgrading its view on inflation progress for 2025 and scaling back its plans for additional cuts.

There was a mixed picture in 2024 of the energy transformation towards clean electricity. New deployments of renewable power saw some delays due to higher interest rates and as investors awaited the US elections. In Europe, end markets such as electric vehicles (EVs) and electric heat pumps, having been strong growth drivers in previous years, suffered from the elimination of subsidies or from inventory adjustments. On the other hand, the new power-hungry AI data centres have become a strong electricity growth driver in the US, which has resulted in significant activity in the buildout of grid infrastructure, including grid optimisation techniques. The technology roadmaps of the next generation of AI data centres foresee further large increases in power needs for many years to come, which might become a serious bottleneck if not managed efficiently.

Fund Activity

The Fund maintained its largest weighting in the Energy Efficiency cluster. Here, exposure to the 'Energy efficiency of Big Data' subcluster was increased, investing in companies offering solutions for efficient data centres and data processing in AI computing. We initiated new positions in Broadcom, Lumentum Holdings, Alchip Technologies and Credo Technology Group Holding, reducing the position in Lattice Semiconductor significantly while the portfolio weight in the industrial subsector was only slightly reduced.

The Fund initiated positions in nVent Electric and Hitachi and reduced those in ANSYS and Qorvo. The Fund slightly increased its exposure to the 'Buildings efficiencies' subcluster, with newly initiated positions in Legrand, Nemetschek and Nibe Industrier. We increased the position in Carrier Global, selling that in Azbil entirely. The Transportation subcluster weight was increased, as new positions were initiated with the EV car manufacturers XPeng, Tesla and Byd. Nio and Nidec were sold entirely in this subcluster.

We reduced exposure to the Power Conversion subcluster by selling the entire position in Wolfspeed and reducing ON Semiconductor and STMicroelectronics. The position in Infineon Technologies was increased. The Energy Storage subcluster weighting was slightly reduced. A new position was initiated with Fluence Energy, the second-largest US battery systems supplier for grid-scale energy storage. The exposure to lithium mining companies was reduced.

The Fund significantly increased its exposure to the 'Smart grid equipment supplier' subcluster by initiating positions in Siemens Energy and Prysmian. The 'Hydrogen infrastructure equipment' subcluster was reduced by reducing our exposure to industrial gases companies. In the 'Electric grid and hydrogen distribution' subcluster we reduced our position in Hydro One.

Exposure to the Clean Power Generation cluster was maintained at low levels, given the continuous difficult market environment. A new position was initiated in GE Vernova while a position in First Solar was reinitiated. We significantly reduced the position in the renewable power producer Boralex.

Market Outlook

The announced US import tariff hikes as well as lingering threats to extend them further will likely remain the greatest concern for the markets, given their potential to increase inflation in the US and impact global growth. At the same time, the Fed is likely to maintain its wait-and-see mode for the foreseeable future given the uncertainties of an expansionary fiscal policy in an environment featuring higher upside risks to inflation.

Going into 2025, we expect a significant resumption of growth in EV sales in Europe against the backdrop of stricter CO₂ regulations. Although starting from a moderate level, we also expect European electric heat pump sales to resume their growth. At the same time, the buildout of the electrical grid including massive deployments of battery storage solutions will continue unabated, with the order books of grid infrastructure suppliers filled for many years. A particular emphasis of ours will remain in technology companies helping to significantly reduce power consumption inside data centres, be it through more efficient data processing, optical interconnects, vertical power supply or liquid cooling.

As a result of the strong demand from data centres, as well as the predicted recovery of the EV sector, we also foresee a demand recovery for power semiconductors. This could bode well for semiconductor stocks in 2025 as their current valuation appears to be very attractive on a medium to long-term view.

We therefore remain very constructive on the underlying themes reflected in the Fund's investment strategy. Given the urge to accelerate the energy transition towards clean energy solutions and electrification, governments worldwide continue to explore the possibilities of reducing dependency on imported energy sources as well as fostering local manufacturing and power generation.

Polar Capital (Switzerland) AG

January 2025

Investment Managers' Reports continued

For the financial year ended 31 December 2024

Smart Mobility Fund

Fund Performance

The Fund (Class I US Dollar Accumulation Shares) returned -10.8% in 2024, underperforming its benchmark, the MSCI All Country World Net Total Return Index, which returned 17.5% (both figures in dollar terms).

The investment scope of the Fund includes four investment clusters. Positive performance contributions came from the Mobility Infrastructure and EV (electric vehicle) Manufacturing clusters. The Autonomous Driving and EV Technologies clusters delivered a negative performance contribution.

At an individual stock level, Tesla, Contemporary Amperex Technology (CATL), Monolithic Power Systems and Delta Electronics were the strongest absolute positive contributors. The weakest contributions came from Wolfspeed, STMicroelectronics, u-blox Holding and Renesas Electronics.

Market Review

Global stock markets had a good year, driven by US mega-cap technology stocks, notably from the artificial intelligence (AI) ecosystem being propelled by NVIDIA. In addition, expectations for the US Federal Reserve (Fed) to start cutting interest rates helped overall sentiment.

In the final quarter of the year, markets were more mixed as investors assessed the outcome of the US presidential election and the potential impact on inflation and growth of import tariffs announced by the new administration. The Fed added to the overall uncertainty, with the central bank downgrading its view on inflation progress for 2025 and scaling back its plans for additional cuts.

The Fund invests in companies enabling the decarbonisation (through electrification) and automation of the global transportation sector.

2024 was an inflection point for autonomous driving, with robotaxi services being made available to the public for the first time. We expect the strong momentum to continue in 2025. The rollout of next-generation autonomous driving solutions based on end-to-end artificial intelligence (AI) models promises to improve efficiency and responsiveness in handling 'long tail' scenarios. Furthermore, a federal framework for self-driving cars planned by the new US administration could facilitate the introduction of more autonomous levels of automation as well as the broader penetration of robotaxi services.

The growth of EVs in 2024 worldwide was nearly entirely driven by China, where they reached 50% as a percentage of total cars sold. This was in stark contrast to the developments in Europe where the sudden elimination of subsidies in certain countries significantly impacted sales. As a consequence, overall EV sales growth in Europe in 2024 remained close to flat compared to the previous year, at 22% of total cars sold.

Fund Activity

The Fund increased its exposure to the Autonomous Driving cluster. In the Autonomous Driving Solutions subcluster, we initiated new positions in Alphabet and Amazon, both expected to show strong growth over the coming years enabled by the latest breakthroughs in AI technology. Furthermore, they offer AI training/inference computing capacities to the automotive industry through their cloud data centre operations. Alphabet is a leading player in automotive software through its Android Automotive operating system and a parent to the autonomous driving technology company, Waymo, which operates robotaxis in several US cities. Amazon is developing its own autonomous vehicles, Zoox, to provide a ride-hailing service.

The Fund initiated a new position in NVIDIA in the Sensor Technologies and AI subcluster. The US semiconductor producer offers leading AI training data centre solutions addressing autonomous driving with Tesla as a key customer. Furthermore, NVIDIA supplies high-performance AI inference processors powering most ADAS (advanced driver assistance solutions) to car OEMs (original equipment manufacturers). We reduced exposure in the Connectivity subcluster by trimming Visteon, u-blox Holding and Trimble Navigation.

The EV Technologies cluster was slightly reduced but remained the largest of the four investment clusters. In the Batteries subcluster, we reduced exposure to lithium mining companies and increased the position in CATL, the world's largest battery manufacturer. In the Electric Powertrain subcluster, we sold the positions in Wolfspeed and Monolithic Power Systems, and greatly reduced that in STMicroelectronics. The Fund initiated a new position in Silergy.

The Fund's exposure to EV suppliers fell through the reduction in positions in BorgWarner and Hyundai Mobis while selling positions in Lear, Nidec, Sinbon Electronics and Linamar entirely. We increased exposure to EV manufacturers, re-initiated a position in Byd and added new positions in Tesla, XPeng and Li Auto. In the Process Equipment and Software subcluster, the positions in Dassault Systèmes and ANSYS were reduced.

Finally, the portfolio weighting of the Mobility Infrastructure cluster remained relatively flat, with increased positions in Schneider Electric and Delta Electronics, trimming that in ABB.

Market Outlook

The announced US import tariff hikes as well as lingering threats to extend them further will likely remain the greatest concern for the markets, given their potential to increase inflation in the US and impact global growth. At the same time, the Fed is likely to maintain its wait-and-see mode for the foreseeable future given the uncertainties of an expansionary fiscal policy in an environment featuring higher upside risks to inflation.

Against the backdrop of stricter CO₂ regulations, we expect a significant resumption of growth in 2025 in Europe in EVs. Combined with more moderate growth rates in China and the US, this should lead to a global EV market penetration of 31% in 2025, up from 25% in 2024.

Overall we remain very constructive on the Fund given the strong fundamentals of the smart mobility sector, with the entire transportation sector having engaged in an unprecedented transformation towards electrification. We will continue to invest across the entire smart mobility value chain, seeking exposure to market segments like EV manufacturers and suppliers, power semiconductors, batteries, hydrogen and EV charging infrastructure, sensor and data processing technologies for automated driving, shared mobility solutions and new developments in the area of driverless mobility.

January 2025

Investment Managers' Reports continued

For the financial year ended 31 December 2024

UK Value Opportunities Fund

Fund Performance

The Fund (Class I GBP Accumulation Shares) returned 15.0% in 2024 compared to 9.4% for its benchmark, the FTSE All Share Total Return Index, in sterling terms.

The FTSE 100 and FTSE 250 indices performed in a reasonably similar fashion, rising 9.7% and 8.4% respectively. The FTSE SmallCap Index rose 13.8% while the FTSE AIM All-Share Index was again a notable underperformer, falling 4.0%. The Fund had positive stock selection at the market-cap level.

Our investment philosophy is centred around hunting across the market-cap spectrum for the very best value opportunities available in the UK market. Overall, the market-cap backdrop was more favourable than in previous years when just a handful of mega-cap stocks dominated returns.

Domestic shares underperformed within the market though they outperformed within the Fund. Sterling outperformed for the first nine months, reflecting stronger than expected economic performance and a more stable political backdrop after the general election. In the latter part of the year, the US dollar posted strong gains, in part due to the re-election of Donald Trump as President, and sterling underperformed the dollar over this period. However, sterling continued to outperform the euro, partly due to a weakening economic and political outlook in continental Europe.

There was no clear evidence of either cyclical or more defensive sectors outperforming within the market. Financials, consumer staples and industrials were the strongest performing sectors while materials, energy and healthcare were among the weakest. The Fund benefitted from positive stock selection at the sector level, with the largest outperformance coming from stocks in materials, industrials and consumer staples. However, stock selection was weaker in consumer discretionary, energy and healthcare. The Fund benefitted from being underexposed to energy and healthcare and from its overweight position in financials. However, allocation was negative in materials and real estate.

The news flow for the year was dominated by politics, with over half the world's population going to the polls, and the continued conflicts in the Middle East and Ukraine. There was a notable change in the outlook for interest rates. Twelve months ago, the market was pricing in six future cuts to UK interest rates; in the end, the Bank of England cut the headline rate just twice. This adjustment up in rate expectations and the yield on UK gilts proved a headwind in the later part of the year.

As we analyse the best and worst performing stocks within the portfolio, it is more encouraging to see corporate fundamentals explaining the share price returns. It may sound simple but by and large those shares that were the strongest performers performed considerably better than expectations and upgraded their profit forecasts while those that missed expectations and downgraded forecasts were the toughest stocks. For a strategy focused on detail-driven research and stock selection, we feel this is a better environment for making returns than trying to predict macroeconomic and political events.

Our best performing shares by absolute contribution were Morgan Sindall Group, 3i Group, Wincanton, Marks & Spencer Group and Premier Foods, while the worst were Indivior, JD Sports Fashion, Watkins Jones, Crest Nicholson Holdings and Serica Energy.

Market Review

We assess the period on our three investment criteria: valuation, durability of profits and our proprietary financial safety check.

Valuation gave a clear picture over the year within the Fund as the cheaper shares outperformed. However, while there was a general pattern that cheaper shares did better within the FTSE 250 Index, within the FTSE 100 Index the outcome was more stark with only those companies in the cheapest decile of P/Es delivering significant outperformance.

On the outlook for profits it was perhaps a year of two halves. Starting from an incredibly low base, UK GDP outperformed expectations in the first half. The UK was the best performing economy in the G7, driven by improving consumer real incomes and continued progress on inflation. However, in the second half the new Labour government damaged both consumer and business confidence with its messaging and delivery of a Budget that significantly increased employment costs. The UK savings ratio has remained high throughout the year, in part driven by slower rate cuts. Going forward, the pace of rate cuts in 2025 will be a key determinant of consumer spending and confidence. Despite all the travails of the new government, the UK looks politically more stable and centrist than many of its European peers.

The premise of our financial safety check is that businesses with good amounts of retained cash and robust balance sheets are best placed to weather storms and seize opportunities whenever they present themselves. During the period of sharply rising rates, we were surprised that our focus on financial strength did not help more. However, as we look across the market this year it is very clear that financial strength matters again; some of the weakest performing shares in the market are those with the highest debt and most uncertain financial positions. Therefore, we are very pleased to report that 50% of our portfolio holdings (excluding banks and insurers) enjoyed net cash balance sheets. These businesses are better placed to weather the storms and we saw a number of companies in a position to undertake M&A in the form of bolt-on acquisitions and strategic deals.

Fund Activity

Over the year, the following companies that we describe as 'cheap value creators' (where we felt the market was underappreciating the returns on invested capital of the business) were added to the Fund: Alpha FX Group, Applied Nutrition, easyJet, Raspberry Pi (subsequently sold), Hollywood Bowl Group, Mitie Group and WPP.

We exited the following as they hit target price and therefore no longer passed our first criterion of 'cheap valuation': BAE Systems, Britvic, Grafton Group, Hargreaves Lansdown, Mondi, Next, Raspberry Pi, Redrow, Smurfit WestRock, Vesuvius and Wincanton. Britvic, Hargreaves Lansdown, Redrow and Wincanton were all sold due to bid approaches and the offers were at or above our target prices.

We will always assess and reassess the portfolio to ensure it passes all our investment criteria. As a result, we exited the following as they failed our second criterion, with reduced conviction in returns on invested capital: Inchcape, Lloyds Banking Group, Indivior, JD Sports Fashion, Morgan Advanced Materials and PZ Cussons.

Financial strength is paramount, as we articulated above, and we no longer felt comfortable that BP passed our financial safety check and exited the holding.

Market Outlook

As we turn to the year ahead and our outlook for the cost of capital, we probably find ourselves in the reverse situation to where we were 12 months ago. Then, the market was pricing in too many rate cuts and the adjustment to a more gradual cutting cycle was definitely a headwind in the latter part of the year. Conversely, the market is now pricing in two cuts for the year ahead and that feels unduly conservative. We know from conversations with our companies that unemployment is likely to increase slightly as a result of the Budget. Consumers are still cautious in their behaviour. Accordingly, as more rate cuts are priced back in throughout the year we should have a beneficial back drop for mid-cap stocks and the more rate-sensitive parts of the market.

Considering the outlook for growth, the picture to us is nuanced. The UK should benefit from an improvement in GDP, driven by an economy where corporate and consumer balance sheets are in good shape. Real wage growth should continue to be positive. However, confidence has been knocked by the Budget and messaging from the new government. The hike in employers national insurance will likely increase unemployment slightly and damage margins. Mortgage rates are still a headwind for those refinancing. This will mean that profit improvement is highly linked to falling rates and consumers once again having the confidence to spend rather than hoard savings. However, the UK's GDP growth rate is forecast to be in the top half of the G7 in 2025, in stark contrast to 2023 when UK growth was incredibly lacklustre.

The UK is a highly attractively priced market, benefitting from high levels of share buyback activity and lots of M&A. However, this is coupled with sentiment that is incredibly bearish, offering up significant mispricing across the market-cap spectrum. 2024 thankfully proved that companies that delivered and beat profit expectations from a reasonable starting valuation were able to deliver strong shareholder returns.

There is an awful lot we do not know about the year ahead or how it will play out. We do not know what will happen in Ukraine or the Middle East or to China's continued economic malaise. We do not know what the impact of Trump's tariffs will be or the direction of an expensive and narrow US stock market. However, rather than expending too much energy on all the 'what ifs' about the year ahead and trying to predict a series of unpredictable events, we can promise to direct all our energy and focus on finding and owning great businesses at great prices with good prospects to upgrade their profits.

UK Value Team

Polar Capital LLP

January 2025

Report of the Directors

For the financial year ended 31 December 2024

The Directors of Polar Capital Funds plc (the 'Company') have pleasure in submitting their Annual Report and Audited Financial Statements for the financial year ended 31 December 2024 to the Shareholders.

Directors' Responsibilities Statement

The Directors are responsible for preparing the Directors' report and the financial statements in accordance with the Companies Act 2014 (including amendments made by the Companies (Accounting) Act 2017, hereinafter 'Companies Act 2014') and the applicable regulations.

Irish company law requires the Directors to prepare financial statements for each financial year. Under the law, the Directors have elected to prepare the financial statements in accordance with International Financial Reporting Standards as adopted by the European Union ('IFRS').

Under company law, the Directors must not approve the financial statements unless they are satisfied that they give a true and fair view of the assets, liabilities and financial position of the Company as at the financial year end date and of the profit or loss of the Company for the financial year and otherwise comply with the Companies Act 2014.

In preparing those financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and estimates that are reasonable and prudent;
- state whether the financial statements have been prepared in accordance with the applicable accounting standards, identify those standards, and note the effect and the reasons for any material departure from those standards; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Company will continue in business.

The Directors are responsible for ensuring that the Company keeps or causes to be kept adequate accounting records which: correctly explain and record the transactions of the Company; enable at any time the assets, liabilities, financial position and profit or loss of the Company to be determined with reasonable accuracy; enable the financial statements and Directors' report to comply with the Companies Act 2014 and with the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 (as amended) (the 'UCITS Regulations') and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the 'Central Bank UCITS Regulations'); and enable the financial statements to be audited. They are also responsible for safeguarding the assets of the Company and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

In this regard, Bridge Fund Management Limited (the 'Manager') has been appointed as the Company's UCITS management company, with overall responsibility for the administration of the Company and the management of its investments. The Manager has in turn appointed Polar Capital LLP and Polar Capital (Switzerland) AG (the 'Investment Managers') as investment managers of the Company's sub-funds and Northern Trust International Fund Administration Services (Ireland) Limited (the 'Administrator') as administrator appointed for the purpose, among others, of maintaining adequate accounting records. Northern Trust Fiduciary Services (Ireland) Limited (the 'Depositary') has been appointed for the purpose of safeguarding the assets of the Company.

Basis of Presentation

The format and certain wording in the Financial Statements has been adapted from those contained in the Companies Act 2014 and IFRS so that, in the opinion of the Directors, they more appropriately reflect the nature of the Company's business as an investment fund.

Directors' Statement on Adequate Accounting Records

The Directors believe that they have complied with the requirements of sections 281 to 285 of the Companies Act 2014 with regard to adequate accounting records by employing personnel with appropriate expertise and by providing adequate resources to the finance function. The accounting records of the Company are maintained by the Administrator at Georges Court, 54–62 Townsend Street, Dublin 2, Ireland.

Business Review, Future Developments and Key Performance Indicators

The Company is an open-ended investment company with variable capital and segregated liability between its sub-funds (each a 'Fund', or collectively the 'Funds'), organised under the laws of Ireland. The Company was incorporated on 28 September 2001.

Details of significant events during the year end are set out in Note 17 of the Financial Statements.

The Company will continue to act as an investment vehicle as set out in its Prospectus.

A detailed review of the Company's activities for the financial year ended 31 December 2024 is included in the Investment Manager's Reports.

Risk Management Objectives and Policies

The principal risks and uncertainties faced by the Company are the investment risks associated with the portfolio of investments held for the account of each Fund and the operational risks associated with their management and administration. A more detailed analysis of some of the risks facing the Company is included in Note 10 of the Notes to the Financial Statements.

Directors' Interests in Shares of the Company

Other than as disclosed in Note 8 to the Financial Statements, there were no contracts or agreements of any significance in relation to the business of the Company in which the Directors had any interest, as defined in the Companies Act 2014, at any time during the financial year.

Transactions with Connected Persons

Regulation 43(1) of the Central Bank UCITS Regulations requires that any transaction carried out with the Company by a management company or depositary to the Company, their respective delegates, and associated or group companies ('connected persons') must be carried out as if negotiated at arm's length. Transactions must be in the best interests of the shareholders.

The Directors are satisfied that the Manager has arrangements (evidenced by written procedures) in place, to ensure that this obligation is applied to all transactions with connected persons, and are satisfied that transactions with connected persons entered into during the year complied with this obligation.

Distributions

Distributions declared for the financial year are as set out in Note 13 to the Financial Statements.

Corporate Governance Statement

The Company has adopted the Corporate Governance Code for Collective Investment Schemes and Management Companies (the 'Code') issued by Irish Funds. The Company is organised in such a way to meet all the provisions of the Code with one exception. All of the Directors are independent of the Investment Managers although the Code includes a recommendation that an investment manager have a representative on a fund board. The Directors have considered this requirement and in their opinion, the absence of a representative of the Investment Managers on the board of the Company does not impair the ability of the board to function fully independently, objectively and effectively in the best interests of investors.

Results

The business of the Company, Key Performance Indicators ('KPIs') and its future outlook are set out in detail in the Investment Managers' Reports. The results of operations for the financial year are set out in the Statement of Comprehensive Income.

Significant Events During the Financial Year

Events which were significant during the financial year are set out in Note 17.

Subsequent Events

Significant events since the financial year end date are detailed in Note 18.

Directors' Compliance Statement made in accordance with Section 225 of the Companies Act 2014

The Directors acknowledge that they are responsible for securing compliance by the Company with its Relevant Obligations as defined with the Companies Act 2014 (hereinafter called the 'Relevant Obligations').

The Directors confirm that they have drawn up and adopted a Compliance Policy Statement setting out the Company's policies that, in the Directors' opinion, are appropriate to the Company in respect of its compliance with its Relevant Obligations.

The Directors further confirm the Company has put into place appropriate arrangements or structures that are, in the Directors' opinion, designed to secure material compliance with its Relevant Obligations including reliance on the advice of persons employed by the Company and external legal and tax advisers as considered appropriate from time to time and that they have reviewed the effectiveness of these arrangements or structures during the financial year to which this Report relates.

Audit Committee

During the financial year ended 31 December 2024, the Company did not have an audit committee in place. The Board has decided not to establish an audit committee as this was deemed most appropriate to the Company's structure as a UCITS fund and the nature, scale and complexity of the Company's operations at this time.

Report of the Directors continued

For the financial year ended 31 December 2024

Statement on Relevant Audit Information

So far as the Directors are aware, there is no relevant audit information of which the Company's auditors are unaware. The Directors have taken all the steps that should have been taken as Directors in order to make themselves aware of any relevant audit information and to establish that the Company's auditors are aware of that information.

Independent Auditor

Forvis Mazars was appointed as the auditor of the Company on 11 September 2024, in accordance with Section 380 of the Companies Act 2014, and have expressed their willingness to continue in office.

On behalf of the Board

David Hammond
Director

Karen Nolan
Director

17 April 2025

The names and persons who served as Directors as at 31 December 2024 and their residency are set out in the General Information section.

Report of the Depositary to the Shareholders

For the financial year ended 31 December 2024

We, Northern Trust Fiduciary Services (Ireland) Limited, appointed Depositary to Polar Capital Funds plc (the 'Company'), provide this report solely in favour of the shareholders of the Company for the year ended 31 December 2024 (the 'Annual Accounting Period'). This report is provided in accordance with the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 (SI No 352 of 2011), as amended, which implemented Directive 2009/65/EU into Irish Law (the 'Regulations'). We do not, in the provision of this report, accept nor assume responsibility for any other purpose or person to whom this report is shown.

In accordance with our Depositary obligation as provided for under the Regulations, we have enquired into the conduct of the Fund for the Accounting Period and we hereby report thereon to the shareholders of the Company as follows;

We are of the opinion that the Company has been managed during the Annual Accounting Period, in all material respects:

- (i) in accordance with the limitations imposed on the investment and borrowing powers of the Fund by the constitutional documents and by the Regulations; and
- (ii) otherwise in accordance with the provisions of the constitutional documents and the Regulations.

For and on behalf of
Northern Trust Fiduciary Services (Ireland) Limited

Independent Auditor's Report

to the members of Polar Capital Funds plc

Report on the audit of the financial statements

Opinion

We have audited the financial statements of Polar Capital Funds plc, for the year ended 31 December 2024, which comprise the Statement of Financial Position, the Schedules of Investments, the Statement of Comprehensive Income, the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares, the Statement of Cash Flows and notes to the financial statements, including the summary of accounting policies set out in note 2.

The financial reporting framework that has been applied in their preparation is the Companies Act 2014, and International Financial Reporting Standards as adopted by the European Union ('IFRS').

The applicable regulations that have been applied in their preparation is the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) (Amendment) Regulations 2019 ('the applicable Regulations').

In our opinion, the accompanying financial statements:

- give a true and fair view of the assets, liabilities and financial position of the Company as at 31 December 2024, and of its results for the year then ended;
- have been properly prepared in accordance with IFRS as adopted by the European Union; and
- have been properly prepared in accordance with the requirements of the Companies Act 2014 and the applicable Regulations.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (Ireland) ('ISAs (Ireland)') and applicable law. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report.

We are independent of the Company in accordance with the ethical requirements that are relevant to our audit of financial statements in Ireland, including the Ethical Standard for Auditors (Ireland) issued by the Irish Auditing and Accounting Supervisory Authority ('IAASA'), and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Conclusions relating to going concern

In auditing the financial statements, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the Company's ability to continue as a going concern for a period of at least twelve months from the date when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report.

Other information

The directors are responsible for the other information. The other information comprises the information included in the annual report other than the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the course of the audit, or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

Opinions on other matters prescribed by the Companies Act 2014

In our opinion, based on the work undertaken in the course of the audit, we report that:

- the information given in the directors' report for the financial year for which the financial statements are prepared is consistent with the financial statements;
- the directors' report has been prepared in accordance with applicable legal requirements;
- the accounting records of the Company were sufficient to permit the financial statements to be readily and properly audited; and
- the financial statements are in agreement with the accounting records.

We have obtained all the information and explanations which, to the best of our knowledge and belief, are necessary for the purposes of our audit.

Matters on which we are required to report by exception

Based on the knowledge and understanding of the Company and its environment obtained in the course of the audit, we have not identified any material misstatements in the directors' report.

The Companies Act 2014 requires us to report to you if, in our opinion, the requirements of any of Sections 305 to 312 of the Act, which relate to disclosures of directors' remuneration and transactions are not complied with by the Company. We have nothing to report in this regard.

Respective responsibilities

Responsibilities of directors for the financial statements

As explained more fully in the directors' responsibilities statement set out on page 50, the directors are responsible for the preparation of the financial statements in accordance with the applicable financial reporting framework that give a true and fair view, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the financial statements is located on the Irish Auditing and Accounting Supervisory Authority's website at: [Description of the auditor's responsibilities for the audit of the financial statements](#). This description forms part of our auditor's report.

The purpose of our audit work and to whom we owe our responsibilities

Our report is made solely to the Company's members, as a body, in accordance with Section 391 of the Companies Act 2014. Our audit work has been undertaken so that we might state to the Company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company and the Company's members, as a body, for our audit work, for this report, or for the opinions we have formed.

UK Value Opportunities Fund	31/01/2017	Up to 1.35%	10%

* Certain share classes will charge a performance fee. Please see the Company's Prospectus and Fund Supplements for further details.

The Company had an additional Fund at 31 December 2024, Asian Opportunities Fund which was dormant and awaiting revocation of its authorisation by the Central Bank. The authorisation of Asian Opportunities Fund has since been revoked, as at 28 January 2025.

For each Fund, share classes are available to both Institutional and Retail investors to which different fee rates may apply. For further information regarding the investment management fee and performance fee relating to each Fund please refer to the Prospectus and the relevant Fund Supplement.

The following table summarises the investment objective and policies for each active Fund, details of which are set out in the relevant Fund Supplement. Investors should note that there can be no guarantee that any Fund will achieve its investment objective.

Fund Name	Investment Objective
Artificial Intelligence Fund	The investment objective of the Artificial Intelligence Fund is to achieve long term capital appreciation by primarily investing in a diversified portfolio of global equity securities which may be listed or traded on a Regulated Market. The Fund is not expected to invest more than 20% of its Net Asset Value in emerging markets. The securities in which the Fund will primarily invest will include equity and equity related securities including, but not limited to, ordinary and preference shares and financial derivative instruments. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Asian Stars Fund	The investment objective of the Asian Stars Fund is to achieve medium to long term growth and to primarily invest in a diversified portfolio of equity securities and equity related securities of, or relating to companies which are domiciled, or exercise the predominant part of their economic activity, in Asian developed and emerging markets. The Fund will generally not invest more than 30% of its Net Asset Value in securities issued by companies in Japan or outside Asia (such as Australia or New Zealand). The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Biotechnology Fund	The investment objective of the Biotechnology Fund is to preserve capital and achieve long-term capital appreciation. The Fund will seek to achieve its investment objective by investing in a globally diversified portfolio of biotechnology, diagnostics and life sciences tools companies and will invest in transferable securities including shares, equity warrants and other types of equity related securities such as preferred shares, which will be listed and traded on a Regulated Market, and issued by biotechnology, diagnostics and life sciences tools companies. The Fund may also invest in Global depository receipts and American and European depository receipts to gain exposure to biotechnology companies. The Fund may invest in unlisted securities subject to a limit of 10% of its Net Asset Value in unlisted securities. The Fund will seek to outperform the NASDAQ Biotechnology Index. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
China Stars Fund	The investment objective of the China Stars Fund is to achieve long-term capital growth by primarily investing in a diversified portfolio of equity securities and equity related securities of, or relating to companies, which are domiciled, or exercise the predominant part of their economic activity, in The Peoples' Republic of China, Hong Kong and Taiwan (together 'Greater China'). The Fund is not expected to invest more than 40% of its Net Asset Value in securities issued by companies outside of Greater China. The securities in which the Fund will invest will include transferable securities, to include shares, equities, equity warrants, preferred shares, shares in collective investment schemes with investment policies that are consistent with the Fund's investment objective and securities convertible into shares, which may be listed on a Regulated Market or unlisted (subject to a limit of 10% of the Net Asset Value of the Fund in unlisted securities) and issued by companies. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Emerging Market ex-China Stars Fund	The investment objective of the Emerging Market ex-China Stars Fund is to achieve long term capital growth. The Fund will seek to achieve its investment objective by primarily investing in a diversified portfolio of equity securities and equity related securities of, or relating to companies, which are domiciled, or exercise the predominant part of their economic activity, in emerging markets excluding China ('Emerging Markets'). The Fund is not expected to invest more than 30% of its Net Asset Value in securities issued by companies outside of the Emerging Markets. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Emerging Market Stars Fund	The investment objective of the Emerging Market Stars Fund is to achieve long term capital growth. The Fund will seek to achieve its investment objective by primarily investing in a diversified portfolio of equity securities and equity related securities of, or relating to companies, which are domiciled, or exercise the predominant part of their economic activity, in emerging markets. The Fund is not expected to invest more than 30% of its Net Asset Value in securities issued by companies outside of the emerging markets. The securities in which the Fund will invest will include transferable securities, such as shares, equities, equity warrants, preferred shares, and shares in collective investment schemes. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

1. Organisation and nature of business continued

Fund Name	Investment Objective
Emerging Markets Healthcare Fund	The investment objective of the Emerging Markets Healthcare Fund is to achieve long term capital growth. The Fund will seek to achieve its investment objective by investing in a portfolio of healthcare companies which are domiciled, or exercise the predominant part of their economic activity, in emerging markets ('Emerging Markets'). The Fund will primarily invest in securities issued by companies located in Emerging Markets countries. The Fund considers a company to be located in an Emerging Markets country if at least 50% of the company's assets, gross revenues or profits during the most recent financial year represent assets or activities located in such countries. The Fund is classified as an Article 6 fund under the SFDR.
European ex UK Income Fund	The investment objective of the European ex UK Income Fund is to deliver strong long term risk adjusted returns to achieve both income and capital growth by investing in securities of issuers that are incorporated, have their headquarters, or exercise a significant part greater than 20% of their economic activities in European markets/countries excluding the United Kingdom. It is anticipated to target an overall yield of 10% higher than that of the Index (MSCI Daily Net Total Return Europe ex UK EUR); however, this cannot be guaranteed. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Financial Credit Fund	The investment objective of the Financial Credit Fund is to provide an attractive level of income. In order to achieve its objective the Fund will invest primarily in the senior and subordinated debt securities of financial companies globally. The types of securities that the Fund can invest in include senior secured debt, senior unsecured debt, including senior preferred and senior non-preferred securities, Tier 1 debt, Tier 2 debt, Tier 3 debt, Additional Tier 1 debt (AT1) and Restricted Tier 1 debt (RT1) both of which are also known as CoCos or Contingent Convertible Bonds, Core Capital Deferred Shares, preference shares, perpetual preferred stock, trust preferred securities, convertible loan stock, government bonds, including supra-national or municipality bonds, exchange traded funds (ETFs), exchange traded notes, business development companies and investment companies. Investment in Additional Tier 1 debt (AT1) and Restricted Tier 1 debt (RT1) shall not exceed 20% of the net assets of the Fund. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Global Absolute Return Fund	The investment objective of the Global Absolute Return Fund is to deliver capital growth over rolling 12-month periods, in all market conditions. There is no guarantee the Fund will achieve this objective over any given period. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Global Convertible Fund	The investment objective of the Global Convertible Fund is to generate both income and long term capital growth by investing in a diversified portfolio of convertible bonds (the underlying of which will be equity securities) and financial derivative instruments. Such securities will be listed and/or traded on a Recognised Exchange. The Fund will have a global geographical focus, and may invest more than 20% of its Net Asset Value in emerging markets. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Global Insurance Fund	The investment objective of the Global Insurance Fund is to provide an attractive total return irrespective of broader economic and financial market conditions. In order to achieve its investment objective the Fund will invest primarily in securities of insurance related companies worldwide. These companies include insurance and reinsurance companies, life assurance companies, insurance brokerage companies and other insurance related businesses including, but not limited to, insurance claims administration companies, insurance support service companies and companies that own insurance related assets. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Global Technology Fund	The investment objective of the Global Technology Fund is long term capital appreciation by way of investing in a globally diversified portfolio of technology companies. Although the Fund may receive income in the form of dividends, interest and from other sources, income is not a primary consideration. The Fund will invest at least two thirds of its net asset value in technology-related companies worldwide. The Fund will take a geographically diversified approach and operate within broad asset allocation ranges, but there are no specified limits on investing in any geographical region or single country. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.

Fund Name	Investment Objective
Healthcare Blue Chip Fund	The investment objective of the Healthcare Blue Chip Fund is to achieve long term capital appreciation. The Fund will seek to achieve its investment objective by investing in a globally diversified portfolio of healthcare companies. The Fund will invest in transferable securities including, shares, equity warrants and other types of equity related securities such as preferred shares, which will be listed and/or traded on a Regulated Market, and issued by healthcare companies, to include, but not limited to, pharmaceutical, biotechnology, medical device and healthcare services companies. The Healthcare Blue Chip Fund may also invest in Global depository receipts and American and European depository receipts to gain exposure to healthcare companies. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Healthcare Discovery Fund	The investment objective of the Healthcare Discovery Fund is to achieve long term capital appreciation by way of investing in a globally diversified portfolio of healthcare companies which may be listed or traded on a Regulated Market. The securities in which the Fund will primarily invest will include equity and equity related securities including, but not limited to, ordinary and preference shares and financial derivative instruments. The Fund will typically invest in small capitalisation issues depending on market liquidity and as it judges the available opportunities. The Fund will take a geographically diversified approach. There are no specified limits on investing in any geographical region or in any sub-sector of healthcare. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Healthcare Opportunities Fund	The investment objective of the Healthcare Opportunities Fund is to preserve capital and achieve long term capital appreciation by investing in a globally diversified portfolio of healthcare companies. The Fund will seek to outperform the MSCI Global Healthcare Index whilst striving to limit the volatility of the Fund's returns. The Fund will take a geographically diversified approach and operate within broad asset allocation ranges, but there are no specified limits on investing in any geographical region or in any sub-sector of healthcare. Non-healthcare related securities will not exceed one third of the Fund's total assets. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Japan Value Fund	The investment objective of the Japan Value Fund is to achieve long term capital appreciation. The Fund will seek to achieve its investment objective by investing primarily in equity securities of issuers that exercise a significant part of their economic activities in Japan or are organised under the laws of Japan. The Fund intends to primarily invest its assets in securities listed on the Tokyo and regional Japanese exchanges that are Regulated Markets. Investment will primarily be concentrated in securities listed on the Tokyo Stock Exchange, however, the Fund may also, to a limited extent, invest in securities listed on regional Japanese exchanges. In addition, the Fund may also, to a limited extent, invest in securities listed and/or traded globally on Regulated Markets which securities provide exposure to the Japanese market. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
North American Fund	The investment objective of the North American Fund is to achieve long term capital appreciation. The Fund invests in a diversified portfolio of securities of North American companies. The Investment Manager will invest in large, medium and small capitalisation companies depending on market liquidity and as it judges the available opportunities. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.
Smart Energy Fund	The investment objective of the Smart Energy Fund is to provide long-term capital growth. The Fund invests in a global portfolio of selected publicly listed companies with exposure to the themes of smart energy, with at least 51% of its gross assets invested on a continuous basis in Equity Participations. Investments will be made in transferable securities including, but not limited to, shares, equity warrants and other types of securities such as preferred shares, which will be listed on a Regulated Market, and issued by companies, and Global, American and European depository receipts. This Fund has a sustainable investment objective and is classified as an Article 9 fund under the SFDR.

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

1. Organisation and nature of business continued

Fund Name	Investment Objective
Smart Mobility Fund	The investment objective of the Smart Mobility Fund is to provide long-term capital growth. The Fund invests in a global portfolio of selected publicly listed companies with exposure to the themes of smart mobility, with at least 51% of its gross assets invested on a continuous basis in Equity Participations. Investments will be made in transferable securities including, but not limited to, shares, equity warrants and other types of securities such as preferred shares, which will be listed on a Regulated Market, and issued by companies, and Global, American and European depository receipts. This Fund has a sustainable investment objective and is classified as an Article 9 fund under the SFDR.
UK Value Opportunities Fund	The investment objective of UK Value Opportunities Fund is to achieve long term capital appreciation. The Fund will seek to achieve its investment objective by primarily investing in a diversified portfolio of equity securities listed in the UK. The securities in which the Fund will invest will primarily include equity securities including, but not limited to ordinary and preference shares and equity warrants. The Fund will aim to outperform the FTSE All-Share Total Return Index by investing in undervalued companies or shares, whilst striving to reduce the volatility of the Fund's return by investing in a diversified portfolio. The Fund promotes environmental and social characteristics under Article 8 of the SFDR.

2. Material Accounting Policy Information

The material accounting policies applied in the preparation of these Financial Statements are set out below.

A. Basis of Preparation

These Financial Statements have been prepared in accordance with International Financial Reporting Standards as adopted by the European Union ('IFRS'), with Irish Statute comprising the Companies Act 2014 and with the Central Bank UCITS Regulations.

The financial statements have been prepared on a fair value basis for financial assets and financial liabilities at fair value through profit or loss and derivative financial instruments in accordance with the relevant accounting standards. All other assets and liabilities are short term in nature and their carrying value approximates fair value. Redeemable participating shares are stated at redemption amount (redeemable participating shares).

The format and certain wording of the financial statements have been adapted from those contained in the Companies Act 2014 so that, in the opinion of the Directors, they more appropriately reflect the nature of the Company's business as an investment fund.

The preparation of financial statements requires management to make judgements, estimates and assumptions that affect the application of policies and the reported amounts of assets, liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgements about carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates. Where applicable, information about assumptions and estimation uncertainties that have an impact on the financial statements are disclosed in note 2 (D) and note 10 and relate to the determination of fair value of financial instruments with significant unobservable inputs. As at 31 December 2024 and 31 December 2023, the Funds do not hold any financial instruments with significant unobservable inputs.

The financial statements have been prepared on a going concern basis. The Directors have considered the effect of the termination of the Financial Opportunities Fund and have assessed that the Company's ability to continue as a going concern will not be affected.

International Financial Reporting Standards

The Company has adopted all applicable International Financial Reporting Standards as endorsed by the European Union.

The Company classifies its redeemable shares as financial liabilities in accordance with IAS 32. The financial statements of the Company also include qualitative disclosure which indicates how the net asset value attributable to redeemable shareholders is calculated.

IFRIC interpretation 23 Uncertainty or Income Tax Treatment

On 7 June 2017, the International Accounting Standards Board issued IFRIC Interpretation 23 – uncertainty over Income Tax Treatments (the ‘Interpretation’). The Interpretation clarifies application of recognition and measurement requirements in IAS 12 Income Taxes when there is uncertainty over the income tax treatments. The Interpretation specifically addresses the following:

- Whether an entity considers uncertain tax treatments separately
- The assumptions an entity makes about the examination of tax treatments by taxation authorities
- How an entity determines taxable profit (tax loss), tax bases, unused tax losses, unused tax credits and tax rates
- How an entity considers changes in facts and circumstances

The Company determines whether to consider each uncertain tax treatment separately or together with one or more other uncertain tax treatments and uses the approach that better predicts the resolution of the uncertainty.

The Company applies significant judgement in identifying uncertainties over income tax treatments. Since the Company operates in a complex multinational environment, it assessed whether the Interpretation had an impact on its financial statements.

The accounting policies have been applied consistently by the Company.

B. Swing pricing/dilution levy

A Fund may suffer dilution of the net asset value per share due to investors buying or selling shares in a Fund at a price that does not reflect dealing and other costs that arise when security trades are undertaken by the Investment Manager to accommodate cash inflows or outflows.

In order to counter this impact, a swing pricing mechanism has been adopted to protect the long-term interests of shareholders of the Funds. If, on any valuation date, the aggregate net capital activity of a Fund exceeds a pre-determined threshold, as established and reviewed by the Board of Directors of the Company, the net asset value per share will be adjusted upwards or downwards to reflect costs associated with the net capital inflows/outflows respectively.

The swing factor is impacted by three factors:

1. Adjustment for the spread between the bid and offer price of the underlying securities (currently a Fund will only swing to bid on material net redemptions).
2. An adjustment for broker fees and other market charges.
3. An adjustment for governmental taxes and duties payable on securities transactions.

As a result of capital activity at the financial year end on the UK Value Opportunities Fund, this Fund’s net asset value per share at the financial year end was adjusted to reflect factors two and three above. The level of activity was not sufficiently material to justify applying factor one, or to require adjustment for any other Funds.

For financial reporting purposes, the net assets of the Fund at 31 December 2024 as disclosed in the Statement of Financial Position and Statement of Changes in Net Assets attributable to Holders of Redeemable Participating Shares do not reflect any swing pricing or duties and charges adjustment. The net asset value per share at 31 December 2024 used for dealing purposes, which is shown in Note 9 and Note 12, includes any swing price adjustments.

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

2. Material Accounting Policy Information continued

B. Swing pricing/dilution levy continued

The following tables set out a reconciliation of the financial reporting net asset value per share and the dealing Net Asset Value per share for the Fund affected:

UK Value Opportunities Fund	Dealing NAV per share	Swing Pricing Adjustment	Financial Statements NAV per share
Class I Sterling Accumulation	£15.13	£0.07	£15.06
Class I Sterling Distribution	£13.30	£0.06	£13.24
Class R Sterling Accumulation	£12.44	£0.06	£12.38
Class S Sterling Accumulation	£15.28	£0.07	£15.21
Class S Sterling Distribution	£13.33	£0.06	£13.27

C. Foreign exchange translation

(i) Functional and presentation currency

Items included in the Company's financial statements are measured using the currency of the primary economic environment in which it operates (the 'functional currency'). The functional currency of each Fund is the currency that reflects the fact that the principal class of participating shares of the Fund have been subscribed in this currency and overall Fund performance is reported to Shareholders in this currency.

(ii) Transactions and balances

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in the Statement of Comprehensive Income. The presentation currency is the functional currency for each individual Fund and for the Company Total figures the presentation currency is US Dollars, denoted by the symbol US\$.

The foreign currency translation adjustment of US\$120,278,050 (31 December 2023: US\$228,549,222) included in the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares and the foreign currency translation adjustment of US\$289,617,393 (31 December 2023: US\$84,263,041) included in the Statement of Cash Flows is due to the movement in exchange rates between 1 January 2024 and 31 December 2024 and the rate difference arising on the translation of the Statement of Comprehensive Income and the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares at average rates. The translation is in relation to the notional value for the Company only and has no impact on any individual Fund.

Proceeds from subscriptions and amounts paid on redemption of redeemable participating shares are translated at daily rates, which approximate the rates prevailing at the dates of the transactions.

D. Investments at fair value

(i) Classification of financial assets

On initial recognition, the Company classifies financial assets as measured at amortised cost or fair value through profit or loss (FVTPL). A financial asset is measured at amortised cost if it meets both of the following conditions and is not designated as at fair value through profit or loss:

- it is held within a business model whose objective is to hold assets to collect contractual cash flows; and
- its contractual terms give rise on specified dates to cash flows that are Solely Payments of Principal and Interest ('SPPI').

The Company's financial assets include equity investments, debt securities, investments in unlisted open-ended investment funds and derivatives. These financial assets are managed and their performance is evaluated, on a fair value basis, with frequent sales taking place, other than short term receivables held for collection and which meet the criteria for measurement at amortised cost.

The Company's financial assets and liabilities are measured as follows:

Financial Assets	Measurement
Equities	FVTPL
Debt securities	FVTPL
Investment funds	FVTPL
Financial derivative instruments	FVTPL
Cash and cash equivalents	Amortised cost
Other assets	Amortised cost

Financial Liabilities	Measurement
Financial derivative instruments	FVTPL
Other liabilities	Amortised cost
Net assets attributable to unitholders	Amortised cost

(ii) Recognition and derecognition of financial liabilities

Purchases and sales of investments are recognised on trade date, which is the date on which the Company commits to purchase or sell the asset. Investments are derecognised when the rights to receive cash flows from the investments have expired or the Company has transferred substantially all risks and rewards of ownership.

A financial liability is derecognised when the obligation specified in the contract is discharged, cancelled or expired.

(iii) Measurement

Financial instruments are measured initially at fair value (transaction price). Transaction costs on financial assets and financial liabilities at fair value through profit or loss are expensed immediately. Subsequent to initial recognition, all instruments classified at fair value through profit or loss are measured at fair value with changes in their fair value recognised in the Statement of Comprehensive Income. Other financial assets are carried at amortised cost using the effective interest rate method, less impairment losses, if any.

Financial liabilities, other than those at fair value through profit or loss, are measured at amortised cost using the effective interest rate method. Financial liabilities arising from the redeemable participating shares issued by the Funds are carried at the redemption amount representing the investors' right to a residual interest in the Funds' assets.

Gains and losses on investments

Gains and losses arising from changes in the fair value of the 'financial assets at fair value through profit or loss' category are included in the Statement of Comprehensive Income in the period in which they arise.

Investment transactions are accounted for on a trade date basis. Profits and losses on the disposal of investments are calculated by reference to the net proceeds received on disposal and the cost attributable to those investments based on the first in first out basis and are included in the Statement of Comprehensive Income.

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

2. Material Accounting Policy Information continued

D. Investments at fair value

(iv) Fair value measurement principles

The fair value of financial instruments traded in active markets (such as publicly traded derivatives and trading securities) is based on quoted market prices at the Statement of Financial Position date. The value of financial assets and liabilities which is quoted, listed or normally dealt in on a regulated market shall be the last traded price on such regulated market as at the valuation point or the mid-price, where no trades occurred on such day where relevant.

If a quoted market price is not available on a recognised stock exchange or from a broker/dealer for non-exchange-traded financial instruments, the value of any investment which is not quoted, listed or normally dealt in on a regulated market shall be the probable realisable value estimated with care and in good faith by a competent person, firm or association making a market in such investment (approved for the purpose by the Depositary) and/or any other competent person, in the opinion of the Directors (and approved for the purpose by the Depositary).

Investment funds

Holdings in open-ended investment funds are included in the accounts at the last reported NAV per share of the funds concerned at close of business on the last dealing day of the reporting period. The changes in the values of these holdings are recognised in the Statement of Comprehensive Income.

Contracts for difference and swaps

Contracts for difference and equity swaps are agreements between the Company and third parties which allow the Company to acquire an exposure to the price movement of specific securities without actually purchasing the securities. The changes in contract values are recorded as unrealised gains or losses and the Company recognises a realised gain or loss when the contract is closed. Realised and unrealised gains and losses on contracts for difference and equity swaps are recognised in the Statement of Comprehensive Income.

Futures

A futures contract is an agreement between two parties to buy or sell a security, index or currency at a specific price or rate at a future date. Upon entering into a futures contract, the Company is required to deposit with a broker an amount of cash or cash equivalents equal to a certain percentage of the contract amount. This is known as 'initial cash margin'. Subsequent payments ('variation margin') are made or received by the Company each day, depending upon the daily fluctuation in the value of the contract. The daily changes in contract value are recorded as unrealised gains or losses and the Company recognises a realised gain or loss when the contract is closed. Realised and unrealised gains and losses on futures contracts are recognised in the Statement of Comprehensive Income.

Forward foreign currency contracts

A forward foreign currency contract ('FFCC') involves an obligation to purchase or sell a specific currency at a future date at a price set at the time the contract is made. FFCCs will be valued by reference to the forward price at which a new FFCC of the same size and maturity could be undertaken at the valuation date. The realised and unrealised gain or loss on an open FFCC is calculated as the difference between the contract rate and the FFCC price and the Company recognises a realised gain or loss when the contract is closed. Realised and unrealised gains and losses on FFCCs are recognised in the Statement of Comprehensive Income. Where a FFCC is purchased to hedge the currency risk of a specific class which is issued in a currency other than the measurement currency of the Company, all gains or losses on that contract are allocated to that class.

Options

As part of the Company's investment strategy for certain Funds, it enters into options which are recognised in the Statement of Financial Position at fair value. The premium on purchased put options exercised is subtracted from the proceeds of the sale of the underlying security or foreign currency in determining the realised gain or loss. The premium on purchased call options exercised is added to the cost of the securities or foreign currency purchased. Premiums paid on the purchase of options which expire unexercised are treated as realised losses. Option premiums on all written options are treated as income. Unrealised gains or losses on options are included in assets or liabilities on the Statement of Financial Position and movements are dealt with through the Statement of Comprehensive Income.

Warrants

Warrants are sometimes used to gain exposure to emerging market equities where custody, liquidity, or other issues make direct ownership of the equities sub-optimal. The valuation of warrants depends on the level of trading. If the warrants are actively traded in the market then the market price is used. If the warrants are not actively traded in the market then the intrinsic value of the warrant based on the underlying equity price and the warrant strike price is used.

Credit Default Swaps

The Funds may enter into credit default swap contracts where one party, the protection buyer, makes an upfront or periodic payment, depending on the contractual arrangement, to the counterparty, the protection seller, in exchange for the right to receive a payment, which may be fixed or related to the value of an underlying security, following a default or other credit event relating to the security or a specified reference index.

An upfront payment received by a Fund, as the protection seller, is recorded as an asset. An upfront payment made by a Fund, as a protection buyer, is recorded as a liability. Periodic payments received or paid by the Funds are disclosed as realised gains/(losses) and disclosed in the Net gain on financial assets and financial liabilities at fair value through profit or loss in the Statement of Comprehensive Income.

Credit default swap contracts are marked to market at each valuation point and the change, if any, is recorded as a movement in unrealised gains/(losses). Payments received or made as a result of a credit event or termination of the contract are recognised, net of a proportional amount of the upfront payment, as realised gains/(losses). In addition to bearing the risk that the credit event will occur, a Fund may be unable to close out its positions at the same time or at the same price as if they had purchased comparable publicly traded securities. The counterparty may also default on its obligation to perform. Risks of loss may exceed amounts recognised on the Statement of Financial Position. Realised gains/(losses) and changes in unrealised gains/(losses) on credit default swaps are disclosed in Net gain on financial assets and financial liabilities at fair value through profit or loss in the Statement of Comprehensive Income.

E. Other measurement principles

Cash and bank overdrafts

Cash, other liquid assets and bank overdrafts are valued at their face value with interest accrued, where applicable. Cash at bank and bank overdraft balances are comprised of cash balances held with The Northern Trust Company (TNTC) and includes investors' money held in collection accounts.

Margin cash and margin receivable

Cash provided by the Funds to a counterparty in relation to futures and option contracts is identified in the Statement of Financial Position as Margin Cash. Margin Cash is not included as a component of cash and cash equivalents in the Statement of Financial Position and is not available to the Funds on demand.

Margin receivable or payable is held with UBS AG.

Receivables

Receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. Receivables are recognised initially at amortised cost plus transaction costs that are directly attributable to their acquisition.

Payables

Payables are recognised initially at fair value and subsequently stated at amortised cost. The difference between proceeds and amount payable is recognised over the period of the payable using the effective interest method.

Offsetting financial instruments

Financial assets and liabilities are offset and the net amount reported in the Statement of Financial Position when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis, or realise the asset and settle the liability simultaneously.

The Company has ISDA Master Agreements (the 'Agreements') with UBS AG. Under certain conditions, as set out under each agreement, amounts payable by one party to the other in respect of derivative contracts covered by the Agreement may be offset against any other amounts payable by the payee to the payer.

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

2. Material Accounting Policy Information continued

E. Other measurement principles continued

Redeemable participating shares

Redeemable participating shares are redeemable at the shareholder's option and are classified as financial liabilities. Distributions on these redeemable participating shares are recognised in the Statement of Comprehensive Income as finance costs.

Redeemable participating shares can be put back to the Company at any time for cash equal to a proportionate share of the Company's net asset value. The redeemable participating shares are carried at the present value of the redemption amount that is payable at the Statement of Financial Position date if the shareholders exercised their rights to put the shares back to the Company.

Transaction costs

Transaction costs are incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or financial liability. An incremental cost is one that would not have been incurred if the entity had not acquired, issued or disposed of the financial instrument.

Transaction costs on the purchase and sale of bonds, forward foreign currency contracts, CFDs, investment funds and warrants are included in the purchase and sale price of the investment. They cannot be practically or reliably gathered as they are embedded in the cost of the investment and cannot be separately verified or disclosed.

Transaction costs on purchases and sales of equities, futures and options are included in net gains/(losses) on financial assets at fair value through profit or loss in the Statement of Comprehensive Income for each Fund. These costs are separately identifiable and are disclosed in Note 15.

Income Equalisation

Income equalisation is a process by which accrued income included in the price of shares purchased and redeemed during the accounting financial year is reported to Shareholders. The subscription price of Shares is deemed to include an equalisation payment calculated by reference to the accrued income of the relevant Fund and the first distribution in respect of any Share will include a payment of income usually equal to or greater than the amount of such equalisation payment. The redemption price of each Share will also include an equalisation payment in respect of the accrued income of the relevant Fund up to the date of redemption. Income equalisation is classified as investment income in the Statement of Comprehensive Income.

F. Distribution policy

The share classes of certain Funds have been approved by the United Kingdom HM Revenue and Customs as Reporting Funds in accordance with the UK Offshore Funds (Tax) Regulations 2009. The Directors intend to continue the distribution policy as outlined below unless otherwise specified in the relevant Fund Supplement. Dividends, if declared, will only be paid out of the Company's net investment income return (i.e. income from dividends, interest or otherwise, less the Company's accrued expenses to be certified for the accounting period), realised and unrealised profits on the disposal/revaluation of investments and other assets less realised and unrealised losses of the Company, although the amount available for distribution in respect of certain Funds may be effectively increased by the charging of expenses to capital. Funds which can avail of this facility are identified in the relevant Fund supplement.

Dividends will normally be paid in January of each financial year for all of the Funds except for the Distributing Share Classes of the European ex UK Income Fund, Global Convertible Fund, Global Insurance Fund and Financial Credit Fund for which dividends are to be declared at the beginning of each calendar quarter in respect of the preceding quarter, and paid by the end of the month in which they are declared. Any dividend paid on a redeemable participating share that is not claimed will not earn interest and, if not claimed within six years of its declaration, shall be forfeited for the benefit of the Company.

G. Operating expenses

The Company is responsible for all normal operating expenses including investment management fees, depositary fees, performance fees, administration fees, audit fees, stamp duties and accruals and other duties and charges incurred on the acquisition and realisation of investments. These are accounted for on an accruals basis. The Investment Managers, Polar Capital (Switzerland) AG and Polar Capital LLP (the 'Investment Managers'), meet all other operating expenses incurred by them in connection with their services.

H. Interest and dividend income

Interest income and expense is recognised in the Statement of Comprehensive Income for all the relevant instruments using the effective interest method. The effective interest method is a method of calculating the amortised cost of the financial asset or the financial liability and of allocating the interest income or expense over the relevant period.

Dividends are recognised to the Statement of Comprehensive Income on the dates on which the relevant securities are listed as 'ex-dividend'. Dividend income is recorded gross of irrecoverable dividend withholding tax which is disclosed separately in the Statement of Comprehensive Income. Bank interest income is recognised on an accruals basis.

3. Fees and Expenses

The Manager is entitled to receive an annual management fee from the Company. This fee will not exceed 0.02% of the Net Asset Value of the Company. All fees paid to the Manager are disclosed separately in the Statement of Comprehensive Income. US\$87,575 (31 December 2023: US\$168,461) was due to the Manager at 31 December 2024.

The Investment Managers are entitled to receive an investment management fee and, where specified in the relevant Fund Supplement, a performance fee in respect of each Fund together with any extraordinary out of pocket expenses. The investment management fee is accrued daily and is payable monthly in arrears. Please see note 1 for a breakdown of investment management and performance fee rates for each Fund. Investment management fees are calculated before deduction for any accrued performance fees. An initial payment of the investment management fee based on the most recently published Net Asset Value will be made on the last day of each month, with an adjustment being made where necessary, on the last day of the next month.

Performance fee calculation methods differ from Fund to Fund. In the method of calculation used for the majority of the Funds, the performance fee is calculated separately for each class of shares in a Fund and is equal to a percentage of the amount by which the increase in the Net Asset Value per share (prior to the provision for a performance fee) during the relevant performance period exceeds the increase in the Indexed Net Asset Value per share (the specific established index that the respective Fund is aiming to track) over the same period. However, the precise method of calculation may differ in each case. Full details are set out in each Fund Supplement. The performance fee is accrued daily and payable annually on 31 December, where there is a performance fee payable.

All fees paid to the Investment Managers, including any performance fees, are disclosed separately in the Statement of Comprehensive Income. US\$43,779,433 (31 December 2023: US\$41,886,905) was due to the Investment Managers at 31 December 2024, which includes both investment management and performance fees.

The Administrator is entitled to receive a fee of 0.09% of the first US\$1.5 billion of the Company's Net Asset Value, 0.07% of the next US\$3.5 billion of the Company's Net Asset Value, 0.04% of the next US\$5 billion of the Company's Net Asset Value and 0.02% of the next US\$5,000,000,000 of the Company's Net Asset Value, 0.015% of the next US\$5,000,000,000 of the Company's Net Asset Value and 0.01% of the Company's Net Asset Value thereafter, subject to a monthly minimum fee of US\$3,500 in respect of each Fund, which shall be accrued daily and paid monthly in arrears. The administrator fee is calculated at a Company level and then prorated between the sub-funds on a daily basis by the Fund Accounting team as part of the daily NAV process. The fees earned by the Administrator is included in the Statement of Comprehensive Income. The fees payable at year end were US\$649,981 (2023: US\$554,005).

The Administrator shall also be entitled to be repaid out of the assets of the Company or relevant Fund all of its reasonable out-of-pocket expenses incurred on behalf of the Company (which shall include legal fees, couriers' fees and telecommunication costs and expenses).

The Depositary is entitled to an annual fee from the Company accrued daily and paid monthly in arrears of 0.015% of the Fund's Net Asset Value first US\$10,000,000,000 of the Company's Net Asset Value, 0.01% of the next US\$5,000,000,000 of the Company's Net Asset Value, 0.005% of the next US\$5,000,000,000 of the Company's Net Asset Value and 0.0025% of the Company's Net Asset Value thereafter, subject to a monthly minimum fee of US\$1,200 in respect of each Fund, which shall be accrued daily and paid monthly in arrears. The Depositary shall also be entitled to be repaid out of the assets of each Fund all reasonable out-of-pocket expenses incurred by it on behalf of the relevant Fund (such as telephone, postage, printing, legal and fax expenses) including stamp duties and registration fees and the fees and expenses of sub-custodians, at normal commercial rates. The fees earned by Depositary are included in the Statement of Comprehensive Income. The fees payable at year end were US\$523,948 (2023: US\$402,193).

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

3. Fees and Expenses continued

FundRock Switzerland SA acts as the Swiss Representative for the Company, having being appointed on 3 October 2024 and receives a fee of CHF 34,200 which will be applied annually commencing 1 January 2025.

For the period to 3 October 2024 BNP Paribas, Zurich branch was entitled to receive the following fees for this service

- (i) an annual fee of CHF 29,000;
- (ii) additional fees for extraordinary services which are not covered by the agreement and which are billed at CHF 250 per hour;
- (iii) reimbursement for all external costs, such as the publication of rates or other publication costs, charges levied by the Swiss Financial Market Supervisory Authority ('FINMA') and any amounts charged by external lawyers on behalf of the Company.

The European Facilities Agent, Zeidler Legal Process Outsourcing Limited, receives an annual fee from the Company which varies according to the number and category of country in which the Funds are registered for marketing purposes. The European Facilities Agent received a fee of EUR 12,750 during the year. The EU Facilities Agent is also entitled to receive reimbursement of any reasonable out of pocket expenses incurred by it in the performance of their duties.

The Directors shall be entitled to a fee and remuneration for their services at a rate to be determined from time to time by the Directors. The total aggregate maximum fee payable to the Board of Directors is set at EUR 1,000,000. Any increase above the stated maximum will require the approval of the Company in a general meeting. The Directors' fees for 31 December 2024 is disclosed in the Statement of Comprehensive Income.

Auditor's Remuneration

The remuneration for all work carried out by the statutory auditors in respect of the financial year is as follows:

	2024 EUR	2023 EUR
Statutory audit fee	85,000	161,700
Other assurance services	–	–
Tax advisory services	–	–
Other non audit services	–	–
	85,000	161,700

The audit fee stated above is different to the Statement of Comprehensive Income due to the impact of opening and closing accruals and the movement in foreign exchange rates in the year. The fees above are disclosed exclusive of VAT.

Amounts payable at the year end to the Administrator, Depositary, Directors, Auditors and other general expenses are included in sundry creditors on the Statement of Financial Position. As at 31 December 2024 and 2023 the amounts payable to the Administrator, Depositary, Directors and Auditors were US\$649,981 (2023:US\$554,005), US\$183,715 (2023:US\$203,729), US\$18,200 (2023:US\$142,093) and US\$119,461 (2023:US\$188,041) respectively.

General expenses include but are not limited to the costs of company secretarial services, directors' and officers' liability insurance, board meeting expenses, the costs of publication of net asset values, regulatory costs and the costs of other professional services, less any amounts of VAT recovered by the Company.

Sundry creditors include but are not limited to amounts included in general expenses at year end but not yet paid, amounts due to the Administrator, the Depositary, the Auditors and other service providers to the Company, amounts due to the directors, provisions for capital gains tax on investments made by the Funds in certain countries and provision made for research costs.

Sundry debtors include but are not limited to amounts prepaid towards general expenses and amounts receivable on settlement of foreign exchange transactions.

4. Cash at Bank, Margin Cash and Bank Overdraft

Cash at bank, margin cash and bank overdraft balances are comprised of cash balances held at The Northern Trust Company, UBS and Goldman Sachs. The Company has an overdraft facility with The Northern Trust Company for liquidity purposes. The assets of the relevant Fund are held as collateral for the overdraft when it is utilised. As at the financial year end the following Funds had bank overdrafts:

	31 December 2024	31 December 2023
Artificial Intelligence Fund	US\$ 9,532	US\$ Nil
China Stars Fund	US\$ 490,742	US\$ Nil
Emerging Market ex-China Stars Fund	US\$ 28,010	US\$ Nil
European ex UK Income Fund	EUR 88,025	EUR Nil
Financial Credit Fund	GBP 349,906	GBP Nil
Global Absolute Return Fund	US\$ 490,431	US\$ Nil
Global Convertible Fund	US\$ 26,268,714	US\$ 7,519,743
Global Insurance Fund	GBP Nil	GBP 27,830,017
Global Technology Fund	US\$ Nil	US\$ 1,974,308
Healthcare Blue Chip Fund	US\$ 304,105	US\$ 357,456
Healthcare Discovery Fund	US\$ 214,029	US\$ 55,375
Healthcare Opportunities Fund	US\$ Nil	US\$ 26,937
Japan Value Fund	JPY 25,268,643	JPY 64,072,418
Smart Energy Fund	US\$ 2,439	US\$ 1,928
Smart Mobility Fund	US\$ 3,915	US\$ 4,032
UK Value Opportunities Fund	GBP 20,270	GBP Nil

5. Soft Commissions and Investment Research

The Investment Managers have committed to the Company that they will bear the cost of all general written research consumed by their investment teams. For certain strategies where the consumption of specialised research is regarded as critical to the investment process, the Company will pay for such costs up to a level pre-agreed with the Directors. These costs are included on the Statement of Comprehensive Income. The Funds that paid for the cost of specialised research are listed below:

Artificial Intelligence Fund	Global Convertible Fund
Asian Stars Fund	Global Insurance Fund
Biotechnology Fund	Global Technology Fund
China Stars Fund	Healthcare Blue Chip Fund
Emerging Market ex-China Stars Fund	Healthcare Discovery Fund
Emerging Market Stars Fund	Healthcare Opportunities Fund
Emerging Markets Healthcare Fund	Japan Value Fund
Financial Credit Fund	Smart Energy Fund
Financial Opportunities Fund	Smart Mobility Fund
Global Absolute Return Fund	UK Value Opportunities Fund

The Investment Managers received no soft commissions during the year.

Notes to the Financial Statements continued

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

7. Taxation

Under current Irish law and practice the Company qualifies as an investment undertaking as defined in Section 739B of the Taxes Consolidation Act, 1997, as amended (the 'TCA'). On that basis, it is not chargeable to Irish tax on its income or gains.

However, Irish tax may arise if a 'chargeable event' occurs. A chargeable event includes any distribution payments to shareholders or any encashment, redemption, cancellation, transfer or deemed disposal of shares for Irish tax purposes, arising as a result of holding shares in the Company for a period of eight years or more, or the appropriation or cancellation of shares of a shareholder by the Company for the purposes of meeting the amount of tax payable on a gain arising on a transfer.

No Irish tax will arise on the Company in respect of chargeable events in respect of:

- (i) transactions by a shareholder who is neither Irish resident nor ordinarily resident in Ireland for tax purposes, at the time of the chargeable event, provided that a relevant declaration is in place (in accordance with Schedule 2b of the TCA) and the Company is not in possession of any information which would reasonably suggest that the information contained therein is no longer materially correct; or
- (ii) transactions by a shareholder who is an exempt Irish investor (as defined in Section 739D TCA).

Dividends, interest and capital gains (if any) received on investments made by the Company may be subject to withholding taxes imposed by the country from which the investment income/gains are received and such taxes may not be recoverable by the Company or its shareholders.

During the financial year ended 31 December 2024, the following Funds were subject to Indian and Brazilian capital gain taxes on the sale of investments: Asian Stars Fund, Emerging Market ex-China Stars Fund, Emerging Market Stars Fund, Healthcare Blue Chip Fund, Healthcare Discovery Fund and Healthcare Opportunities Fund. Such charges are included in Net realised and unrealised gain/(loss) on investments in the Statement of Comprehensive Income.

8. Related Party Transactions

A number of the Directors held interests directly or indirectly in the Funds during the financial year. At the end of the year, their interests were as follows:

Director	Fund	Share Class	Number of Holdings 31 December 2024	Number of Holdings 31 December 2023
Charles Scott	Global Insurance Fund	Class R US Dollar Accumulation	69,977	69,977
David Astor	Financial Credit Fund	Class I Sterling Distribution	9,531	9,531
	Financial Opportunities Fund	Class I Sterling Distribution	4,685	4,685
	Japan Value Fund	Class S Hedged	1,125	1,125
Karen Nolan	Artificial Intelligence Fund	Class I Euro Accumulation	–	2,729
	Emerging Market Stars Fund	Class I Euro Accumulation	–	3,817

No other Director had any interest in the redeemable participating shares of the Company during the financial year.

The fees paid to the Directors, the Investment Managers and the other related parties are set out in Note 3.

Polar Capital Partners Limited is a controlling partner of or ultimate parent of the Investment Managers. As at 31 December 2024 and 31 December 2023, Polar Capital Partners Limited held shares in the Funds listed below:

Fund	31 December 2024		31 December 2023	
	Value of Holding	% Net Asset Value	Value of Holding	% Net Asset Value
Artificial Intelligence Fund	\$5,871,811	0.62	\$31,282	0.01
Asian Stars Fund	\$84,316	0.02	\$69,147	0.03

9. Shareholders' Funds

On incorporation, the authorised share capital of the Company was US\$40,000 divided into 40,000 Subscriber Shares with a par value of US\$1 each and 500,000,000,000 redeemable participating shares of no par value. There are 7 Subscriber Shares currently in issue which are held by Polar Capital LLP and its nominees. These subscriber shares do not participate in any of the Company's Funds and are not included as part of the net asset value of the Company. The Directors consider this treatment is appropriate, given the nature of the Company as an investment fund.

10. Financial Risk Management

The Funds hold financial instruments, which at any one time may comprise securities, cash and derivatives, held in accordance with the investment objective and policies of each Fund.

A review of the portfolio activity for the financial year is available in the Investment Managers' Reports and a detailed analysis of the investments is shown in the Portfolio Statements. Investments listed on the Portfolio Statements are stated at fair value as described in Note 2.

Risks

The following summary is not intended to be a comprehensive summary of all the risks inherent in investing in the Company and investors should refer to the prospectus for a more detailed discussion of these risks.

Strategy in using Financial Instruments

The Funds are exposed to a variety of financial risks in pursuing their stated investment objectives and policies. These risks are defined for financial reporting purposes by IFRS as credit risk, liquidity risk and market risk (which in turn includes currency risk, interest rate risk and price risk). The Funds take exposure to certain of these risks to generate investment returns on their portfolios, although these risks can also potentially result in a reduction in the Funds' assets. The Investment Managers will use their best endeavours to minimise the potentially adverse effects of these risks on the Funds' performance where it can do so while still managing the investments of the Funds in ways that are consistent with each Fund's investment objectives and policies.

The risks, and the measures adopted by the Company for managing these risks, are detailed over the coming pages.

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

10. Financial Risk Management continued

Market price risk

Market price risk is the risk that the fair value of a financial instrument or its future cash flows will fluctuate because of changes in market prices.

The assets of the Funds consist principally of equities, equity related securities, fixed income securities, contracts for difference and currency derivatives used for hedging purposes. Credit default swaps, interest rate futures and options are also used by certain Funds from time to time.

The values of these instruments are determined by market forces and there is accordingly a risk that market prices can change in a way that is adverse to a Fund's performance.

The Directors have adopted a number of investment restrictions which are set out in the individual Fund Supplements and which limit the exposure of the Funds to adverse changes in the price of any individual financial asset. In accordance with Company policy, the Investment Managers monitor the Funds' positions on a daily basis and report regularly to the Board of Directors. The Board reviews the information on each Fund's overall market exposure provided by the Investment Managers at its periodic meetings.

In addition, the Investment Managers manage the exposure of the portfolios to the risk of adverse changes in the general level of market prices to the extent consistent, in the judgement of the relevant Investment Manager, with each Fund's respective investment objective.

Use of Derivatives and Efficient Portfolio Management

Depending on the Funds involved, the Company may invest in derivatives for both investment and efficient portfolio management purposes, subject to the conditions and within the limits from time to time stipulated by the Central Bank under the UCITS Regulations. A number of the Funds use currency forwards to hedge share class exposures.

Apart from the Global Absolute Return Fund and Global Convertible Fund, the Investment Managers have generally only used derivatives instruments in the Funds for the purpose of efficient portfolio management and efficient access to markets during the financial year. This includes contracts for difference, option contracts, forward foreign currency contracts and futures contracts. Risks arising from the use of derivatives at the financial year end are consistent with those set out in the Prospectus.

Open derivative contracts at the financial year end are disclosed in the Portfolio Statements, including the relevant counterparty, the underlying securities, currencies or indices, and the market value or unrealised gain/loss on the contract at the financial year end.

At 31 December 2024, market price risks applying to each Fund are affected by three main components: changes in market prices, interest risk and currency exchange risk.

The following tables show the sensitivity of each Fund (for a representative share class) to changes in market prices based on a 10% price stress test on the portfolio as at 31 December 2024 and 31 December 2023.

Sensitivity analysis is calculated after an adjustment for swing pricing.

Market price risk analysis is based on the dealing NAV per share.

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

10. Financial Risk Management continued

Market price risk continued

Some limitations of sensitivity analysis are:

- (i) the models are based on historical data and cannot take account of the fact that future market price movements, correlations between markets and levels of market liquidity in conditions of market stress may bear no relation to historical patterns;
- (ii) the market price risk information is a relative estimate of risk rather than a precise and accurate number;
- (iii) the market price information represents a hypothetical outcome and is not intended to be predictive; and
- (iv) future market conditions could vary significantly from those experienced in the past.

Exposure to derivatives

In respect of the Global Absolute Return Fund, the Investment Manager uses a Value at Risk ('VaR') based approach to limit the exposure of the Fund to derivatives. In accordance with the UCITS Regulations, derivatives exposure is limited to the extent necessary to keep the Fund's VaR within the limit set out below. VaR is measured using a 99% confidence level.

Global Absolute Return Fund

The VaR limit for the Global Absolute Return Fund is 20% based on a 20-day holding period. The minimum VaR during the financial year was 1.47%.

The maximum VaR during the financial year was 6.47%. The average VaR during the financial year was 2.98%.

Gross leverage, calculated as the sum of the absolute notional values of the derivatives used in the Fund, is not anticipated to exceed 250% of Net Asset Value of the Fund at any given time.

All of the other Funds use the commitment approach to measure derivatives exposure.

Currency risk

Currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates. Each Fund is exposed to currency risk as the assets and liabilities of each Fund may be denominated in a currency other than the base currency of that Fund.

The fluctuations in the rate of exchange between the currency in which the asset or liability is denominated and the functional currency could result in an appreciation or depreciation in the fair value of that asset when measured in the Fund's base currency. The Investment Managers may attempt to mitigate these risks through the use of financial derivative instruments.

Currency transactions undertaken for the Funds will also include hedges against the base or functional currency of the Funds in respect of the values of share classes which are denominated in currencies other than the base currency. These hedges are specific to individual share classes and will not impact all investors.

The Investment Managers monitor each Fund's currency exposure, where relevant to the investment strategy for the Fund, on a daily basis and report regularly to the Board of Directors.

At 31 December 2024 each Fund's currency exposure was as follows:

	Non-US\$ currency Assets US\$	Non-US\$ currency Liabilities US\$	Non-US\$ Cash Balance US\$	Forward Foreign Currency Contracts US\$	Net Non-US\$ Currency Assets US\$

Interest rate risk

Most of the Funds' financial assets and liabilities are non-interest bearing and any excess cash and cash equivalents are invested at short term market interest rates. As a result, the Funds are not subject to significant amounts of risk due to fluctuations in the prevailing level of market interest rates.

The three Funds which invest in interest bearing securities are the Financial Credit Fund, the Global Absolute Return Fund and the Global Convertible Fund and as such their net asset values are exposed to changes in interest rates, the risk being that if interest rates rise, they will cause the value of the interest-bearing securities component of the Funds' portfolio to decline. These portfolios consist of a variety of positions with varying maturity dates; in general, the longer the period to maturity of the securities, the greater the risk that the net asset value will decline as a result of an increase in interest rates. The Investment Manager of these Funds regularly monitors the portfolio and particularly the spread of maturity dates and portfolio balances to achieve the investment objective in line with change in interest rates.

As part of its monitoring process the relevant Investment Manager, when looking at individual bonds and the portfolios as a whole, will consider their sensitivity to changes in interest rates. This will include taking into account their position in the capital structure, whether they have fixed maturities or are perpetual, and whether they have call dates. If they have call dates, the terms if not called will be considered, whether fixed or floating, and what margin over the relevant risk free rate the bond will yield if not called. The Investment Manager will also compare the yield on corporate bonds relative to government bonds and the impact that this may have in increasing or reducing the sensitivity of the portfolio to moves in interest rates.

10. Financial Risk Management continued

Interest rate risk continued

As at 31 December 2024, should interest rates have fallen by 0.25%, with all other variables remaining constant, the increase in net assets attributable to the holders of redeemable participating shares would amount to approximately 0.75% or £211,139 (31 December 2023: 0.61%). An equal change in interest rates in the opposite direction would have decreased net assets attributable to the holders of redeemable participating shares by 0.74% or £208,324 (31 December 2023: 0.61%).

Global Absolute Return Fund

10. Financial Risk Management continued

Credit risk

Credit risk is the risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation.

The majority of the Funds' financial assets are equity securities. As a result, they are not subject to significant amounts of credit risk.

The credit rating of the fixed income securities held in the three Funds that do invest in debt securities were as follows at 31 December 2024 and 31 December 2023.

Financial Credit Fund	31 December 2024		31 December 2023	
	% Holding	Value GBP	% Holding	Value GBP

Credit risk on settlement

Transactions in securities are generally settled or paid for on delivery or cleared through the appropriate clearing system for the market on which the securities are traded. The risk of default is not considered to be material, as delivery of securities sold is only made once the Depositary has received confirmation of payment. Payment is also only made on a purchase once confirmation of delivery of the securities has been received by the Depositary. The trade will fail if either party fails to deliver the required confirmations.

Credit risk on cash and receivables

The Company has an exposure for cash at bank, margin cash and margin receivable as an unsecured creditor to either counterparty risk which would involve a significant risk of loss in the event of a default by either. Credit risk for sundry debtors is considered immaterial.

At 31 December 2024 and 31 December 2023, none of the Funds' financial assets were past due or impaired.

The relevant Investment Manager monitors each Fund's credit exposure, where relevant to the Fund's investment strategy, on a daily basis and reports regularly to the Board of Directors, which reviews the information provided by the Investment Manager on significant exposures at its periodic meetings.

Credit risk statement

The Depositary is responsible for the safe-keeping of assets. The Depositary has appointed The Northern Trust Company ('TNTC') as its global sub-custodian. Both the Depositary and TNTC are wholly owned subsidiaries of Northern Trust Corporation ('NTC'). As at 31 December 2024, NTC had a long-term credit rating from Standard & Poor's of A+ (31 December 2023: A+).

TNTC, in the discharge of its delegated depositary duties, holds in custody (i) all financial instruments that may be registered in a financial instruments account opened on the books of TNTC and (ii) all financial instruments that can be physically delivered to TNTC. TNTC ensures all financial instruments (held in a financial instruments account on the books of TNTC) are held in segregated accounts in the name of the relevant Fund, clearly identifiable as belonging to the relevant Fund, and distinct and separately from the proprietary assets of TNTC, Depositary and NTC.

The Depositary verifies the Fund's ownership of other assets by assessing whether the Fund holds the ownership based on information or documents provided by the Fund or where available, on external evidence.

In addition TNTC, as banker, holds cash of the Fund on deposit, with the exception of amounts in Jordanian Dinar, Saudi Riyal, cash in Chinese onshore accounts, which are held with the relevant local sub-custodian / financial institution in the market. Such cash is held on the balance sheet of TNTC or the relevant local bank concerned. In the event of insolvency of TNTC or the relevant bank concerned, in accordance with standard banking practice, the Company will rank as an unsecured creditor of TNTC and the relevant local bank in respect of any cash deposits.

The insolvency of the Depositary or one of its agents or affiliates may cause the Funds' rights with respect to their assets to be delayed.

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

10. Financial Risk Management continued

Credit risk continued

As noted in Note 2 (E), Cash at bank and bank overdraft balances are comprised of cash balances held at TNTC. As at 31 December 2024, cash was held with counterparties and brokers as follows:

Financial Credit Fund: GBP(141,034) (31 December 2023: GBP(124,179))

Global Absolute Return Fund: US\$3,907,783 (31 December 2023: US\$2,874,545)

Global Convertible Fund: US\$20,031,003 (31 December 2023: US\$24,834,645)

Global Technology Fund: US\$319,400 (31 December 2023: US\$279,436)

The Funds' counterparties and brokers had the following long-term credit ratings from Standard & Poor's as at 31 December 2024:

UBS AG: A+ (31 December 2023: A+).

Goldman Sachs: A+ (31 December 2023: A+)

Liquidity risk

Liquidity risk is the risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities as they fall due.

The Funds are exposed to daily cash redemptions of redeemable participating shares. The Funds invest the majority of their assets in securities and other instruments that are traded on an active market and which are considered to be liquid as under normal market conditions, they can be readily disposed of in the event that cash needs to be raised to meet redemptions or to pay expenses.

In accordance with Company policy, the Investment Managers monitor the Funds' liquidity on a daily basis and report regularly to the Board of Directors, which reviews the information provided by the Investment Managers on significant exposures at its periodic meetings.

The Funds' listed securities are considered to be readily realisable as they are principally listed on major European, Asian and US stock exchanges. At 31 December 2024 and 31 December 2023, the Funds all held liquid assets and liabilities that could be realised in less than one month. The residual contractual maturities of financial liabilities held by the Funds are all within 3 months.

Offsetting Financial Instruments

The Company has not offset any financial assets and financial liabilities in the Statement of Financial Position. Financial assets and financial liabilities which are subject to enforceable master netting arrangements are detailed in the tables below.

The Global Convertible Fund is party to an ISDA Master Agreement with UBS AG, which was signed on 30 August 2013. The existing Agreement was amended by adding Global Absolute Return Fund on 31 December 2018.

Fair value hierarchy

Financial assets and financial liabilities at fair value through profit and loss are valued at fair value at the Statement of Financial Position date. Subsequent to initial recognition, all financial assets and financial liabilities at fair value through profit or loss are measured at fair value. Gains and losses arising from changes in the fair value of the 'financial assets or financial liabilities at fair value through profit or loss' category are presented in the Statement of Comprehensive Income within 'Net gain/loss on financial assets and financial liabilities at fair value through profit or loss' in the period in which they arise. Fair value is the price that would be received to sell the asset or paid to transfer the liability in an orderly transaction between market participants at the measurement date.

In determining fair value, securities which are quoted, listed or traded on a recognised exchange will be valued at the last traded price (or, if no last traded price is available, at the mid-market price).

A financial instrument is regarded as quoted in an active market if quoted prices are readily and regularly available from an exchange, dealer, broker, industry group, pricing service, or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis.

The fair value of financial assets and liabilities that are not traded in an active market is determined by using valuation techniques.

For instruments for which there is no active market, the Company may use internally developed models, which are usually based on valuation methods and techniques generally recognised as standard within the industry.

Valuation models are used primarily to value unlisted equities, for which markets were or have been inactive during the financial year. Some of the inputs to these models may not be market observable and are therefore estimated based on assumptions.

Notes to the Financial Statements continued

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

10. Financial Risk Management continued

Fair value hierarchy continued

Financial assets and liabilities at fair value through profit or loss as at 31 December 2023 continued

Categorisation within the hierarchy has been determined on the basis of the lowest level input that is significant to the fair value measurement of the relevant asset as follows:

Level 1 – valued using quoted prices in active markets for identical assets.

Level 2 – valued by reference to valuation techniques using observable inputs other than quoted prices included within level 1.

Level 3 – valued by reference to valuation techniques using inputs that are not based on observable market data.

The following table represents the movement in Level 3 instruments for the year ended 31 December 2024:

Biotechnology Fund	Level 3 USD
Opening Value 1 January 2024	–
Transfer from level 1	3,381,480
Sales	–
Purchases	–
Realised losses during the year	–
Movement in unrealised losses	–
Closing Value 31 December 2024	3,381,480
Total unrealised losses for the year included in the statement of comprehensive income for holdings at the end of the year	(6,935,743)

Financial Opportunities Fund	Level 3 USD
Opening Value 1 January 2024	–
Transfer from level 1	97,409
Sales	–
Purchases	–
Realised losses during the year	–
Movement in unrealised losses	–
Closing Value 31 December 2024	97,409
Total unrealised losses for the year included in the statement of comprehensive income for holdings of Atom Bank at the end of the year	(1,742)

Global Absolute Return Fund	Level 3 USD
Opening Value 1 January 2024	–
Transfer from level 1	813,947
Sales	–
Purchases	–
Realised losses during the year	–
Movement in unrealised losses	–
Closing Value 31 December 2024	813,947
Total unrealised losses for the year included in the statement of comprehensive income for holdings of Spicarium and Spical Warrant at the end of the year	8,245

Level 3 classified holdings, C4X Discovery, Atom Bank and Spicarium were delisted during the year and were valued as at 31 December 2024 by a pricing committee.

Description	Fair Value at 31 December 2024	Valuation Technique	Unobservable Inputs	Sensitivity Analysis on Unobservable Inputs
Biotechnology Fund	\$3,381,480	Pricing committee	Delisted security	5% sensitivity (+/-) \$169,074
Financial Opportunities Fund	\$97,409	Pricing committee	Delisted security	5% sensitivity (+/-) \$4,870
Global Absolute Return Fund	\$813,948	Pricing committee	Delisted security	5% sensitivity (+/-) \$40,697

The valuation techniques used by the Company are explained in the accounting policies described in note 2.

11. Cross/Segregated Liability

The Company is an umbrella fund investment company with segregated liability between the Funds of the Company. Under Irish law, being the law applicable to the Company, this should result in any liabilities attributable to any Fund being borne solely by that Fund in the event of any insolvency.

14. FCA Side Letter Policy

The Financial Conduct Authority (FCA) in the United Kingdom, which regulates Polar Capital LLP, expects all investment managers authorised and regulated by the FCA to write to investors in the funds managed by them with details of any Side Letter that may have been entered into by it. The FCA considers a Side Letter to be an arrangement which can reasonably be expected to provide an investor with materially more favourable rights than other investors, such as enhanced redemption rights or the provision of portfolio information which are not generally available. Polar Capital LLP has confirmed to the Company that it is not aware or party to an arrangement whereby an investor has any preferential redemption terms. However in exceptional circumstances, for example where an investor seeds a new Fund, Polar Capital LLP has provided investors on the Fund's behalf with portfolio information and capacity commitments.

Notes to the Financial Statements continued

For the financial year ended 31 December 2024

15. Transaction Costs

During the financial year ended 31 December 2024 and 31 December 2023, the Funds incurred transaction costs in the purchase and sale of investments as follows:

	Currency	31 December 2024	31 December 2023
Artificial Intelligence Fund	US\$	1,085,859	357,578
Asian Stars Fund	US\$	900,510	387,569

Financial Highlights are based on financial statements NAV per share.

The above shares classes represent the overall performance of each Fund. Other share classes may have a different performance depending on the specific characteristics of the share class.

ASC 740-10 'Accounting for Uncertainty in Income Taxes – an interpretation of ASC 740' clarifies the accounting for uncertainty in income taxes recognised in the Fund's financial statements in conformity with ASC 740 'Accounting for Income Taxes'.

ASC 740-10 prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken on a tax return.

In conformity with ASC 740-10, the Directors have analysed the Funds' tax positions to be taken for the financial year ended 31 December 2024 and 31 December 2023 have concluded that no provision for income tax is required in the financial statements.

Information for Investors (unaudited)

Information for Investors in the Federal Republic of Germany (unaudited)

The Prospectus, the Key Information Documents, the Memorandum and Articles of Association of the Company and the annual and semi-annual reports of the Company and a complete listing of the purchases and sales during the year, each in paper form, as well as the Net Asset Value per Share, issue and redemption prices and any switching prices are available and may be obtained free of charge from the office of the EU Facilities Agent.

Information for Investors in Switzerland (unaudited)

The Company has appointed FundRock Switzerland SA registered office at Route de Cité-Ouest 2, 1196 Gland, Switzerland (the 'Swiss Representative') as representative and paying agent for Switzerland on 3rd of October. For redeemable participating shares distributed in Switzerland, the performance place is at FundRock Switzerland SA, Gland branch address. Investors can obtain free of charge, the prospectus, the simplified prospectus (both also available for potential investors), the Key Information Documents (KIDS) the Articles of Association and the last annual and interim reports from the representative at the above address and the official publications for the Company are published in www.fundinfo.com

Following a directive of the Asset Management Association (AMAS) dated 05 August 2021, the Company is required to supply performance data in conformity with the said directive. This data can be found under each of the Fund reports.

Please note that all references to a specific index are for comparative purposes only.

Past performance is no indication of current or future performance. The value of an investment can fall as well as rise as a result of market fluctuations and investors may not get back the amount originally invested. The performance data does not take account of the commissions and costs incurred on the issue and redemption of redeemable participating shares.

Investors should contact the Swiss representative at the above address should they require additional information, e.g. on performance including the composition of the relevant indices where applicable.

Smart Mobility Fund	1.04	1.04	1.02	1.02
UK Value Opportunities Fund	0.71	0.71	0.73	0.73

* Emerging Markets Healthcare Fund launched on 31 May 2024.

The Total Expense Ratio ('TER') has been calculated in accordance with the Asset Management Association Switzerland TER guidelines.

PEA Compliance (unaudited)

The European ex UK Income Fund is Plan d'Épargne en Actions ('PEA') eligible. For the purpose of eligibility requirement of Article L-221-31 of the French Monetary and Financial Code, the Fund must at all times during the year ended 31 December 2024 be invested in more than 75% of PEA eligible assets. PEA eligible assets are defined as equity or equity equivalent securities, which have their registered office in a country which is a member of the EU or the European Economic Area.

	% PEA Eligible Assets 31 December 2024	% PEA Eligible Assets 31 December 2023
European ex UK Income Fund	90.95%	79.05%

Appendix I – UCITS Remuneration Disclosure (unaudited)

The below disclosure is made in respect of the remuneration policies of Bridge Fund Management Limited (the ‘Manager’) in accordance with the European Union Directive 2014/91/EU as implemented in Ireland by European Union (Undertakings for Collective Investment in Transferable Securities) (Amendment) Regulations 2016. This requires UCITS management companies to establish and apply remuneration policies and practices that promote sound and effective risk management, and do not encourage risk taking which is inconsistent with the risk profile of the UCITS.

The Manager has designated the following persons as Identified Staff:

- Executive and Non-Executive members of the management body of the Manager e.g. CEO, Directors, Executive and Non-Executive Directors;
- Senior management;
- Risk takers – staff who can exert material influence on the Manager or on the UCITS or AIFs it manages;
- Those in control functions: Operations, HR, Compliance, Finance where applicable;
- Staff whose total remuneration takes them into the bracket of senior management and risk takers, whose professional activities have a material impact on the Manager’s risk position or those of the UCITS and/or AIFs it manages; and
- Categories of staff of the entities to which portfolio management or risk management activities have been delegated whose professional activities have a material impact on the Manager’s risk position or those of the UCITS and/or AIFs it manages.

The Remuneration Policy is designed to discourage risk taking that is inconsistent with the risk profile of the UCITS and the Manager is not incentivised or rewarded for taking excessive risk.

The Manager is required under UCITS regulations to make quantitative disclosures of remuneration. Disclosures are provided in relation to Identified Staff who are employed directly by the Manager and Identified Staff who have the ability to materially impact the risk profile of the UCITS including individuals who, although not directly employed by the Manager, are assigned by their employer to carry out services directly by the Manager.

All remuneration paid to Identified Staff can be divided into:

- Fixed remuneration (payments or benefits without consideration of any performance criteria); and
- Variable remuneration (additional payments or benefits depending on performance or in certain cases, other contractual criteria) which is not based on the performance of the UCITS.

The Manager’s annual remuneration details for the year ended 31 December 2024 are disclosed below:

Description	Number of beneficiaries	Total remuneration paid	Fixed remuneration paid	Variable remuneration paid
Total Staff Remuneration	62	€4,315,711	€3,349,915	€965,796
Senior Management (including executives), risk takers and other identified staff	15	€1,920,967	€1,274,081	€646,886

Details of the Remuneration Policy, including, but not limited to, a description of how remuneration and benefits are calculated and the identity of persons responsible for awarding the remuneration and benefits is available at the following website:

<https://bridgefundservices.com/media/ceupd4jd/remuneration-policy.pdf>

Appendix II – Securities Financing Transactions Regulation (unaudited)

Article 13 of the Securities Financing Transactions Regulation ('SFTR') requires information to be provided as to the use of securities financing transactions ('SFT') and Total Return Swaps ('TRS').

An SFT is defined in Article 3 (11) of the SFTR as: a repurchase transaction, securities or commodities lending and securities or commodities borrowing; a buy-sell back transaction or sell-buy back transaction; or a margin lending transaction.

As at 31 December 2024, the Company held Total Return Swaps (including CFDs) but no SFTs. The amount of securities and commodities on loan as a proportion of total lendable assets (excluding cash and cash equivalents) was 0.00% as at 31 December 2024.

Global Data

Type of Asset	Absolute Amount	Proportion of AUM (%)
Contracts for difference		
Global Absolute Return Fund	\$63,401,584	23.48%
Global Convertible Fund	\$24,679,752	3.90%

Concentration Data

	Collateral Issuers	Volume of the collateral securities and commodities
	UBS AG	\$12,287,010

The gross volume of outstanding trades with each counterparty across all SFTs is as follows:

	Counterparty	Gross volume of outstanding trades*
Contracts for difference		
Global Absolute Return Fund	UBS AG	\$63,401,584
Global Convertible Fund	UBS AG	\$24,679,752

* Gross volume of outstanding transactions expressed as market value of open derivative contracts at the reporting date.

Aggregate transaction data

Contracts for difference	Type/ Quality of collateral	Currency	Maturity tenor (collateral)	Maturity tenor (SFTs/ Total Return Swaps)	Country of counterparty establishment (not collateral)	Settlement and clearing
Global Absolute Return Fund						
UBS AG	Cash	Multiple	>1 year	>1 year	Switzerland	Bilateral
Global Convertible Return Fund						
UBS AG	Cash	Multiple	>1 year	>1 year	Switzerland	Bilateral

The share of collateral that is reused is 0.00%.

Safekeeping

Counterparty	Collateral assets safe-kept
UBS AG	Cash Collateral

The proportion of collateral held in segregated accounts, in pooled accounts or any other accounts is 100.00%.

Return/(Costs)

Contracts for difference	Absolute Returns		Overall returns %
	Return	Cost	
Global Absolute Return Fund	\$19,316,678	-\$799,948	100
Global Convertible Fund	\$88,467	-\$4,447,497	100

Appendix III – Sustainable Finance Disclosure Regulation (unaudited)

Artificial Intelligence Fund

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Artificial Intelligence Fund (the “Fund”)
Legal entity identifier: 549300CIM5X5EALQL483

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<div><input checked="" type="radio"/> <input type="radio"/> <input type="radio"/> Yes</div> <div><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%<div><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div> <div><input type="checkbox"/> It made sustainable investments with a social objective: ____%</div>	<div><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="radio"/> No</div> <div><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments<div><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective</div></div> <div><input checked="" type="radio"/> It promoted E/S characteristics, but did not make any sustainable investments</div>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies within the global investment universe with products and services which contributed to:

- (i) improving the efficiency, resilience, and sustainability of infrastructure
- (ii) increasing business productivity and efficiency
- (iii) improving individual prosperity, well-being, and social empowerment

For the avoidance of doubt, the Fund did invest in companies within the global investment universe the products and services of which did not, in part or in whole, contribute to the promoted characteristics outlined above. Such companies included, by way of example,

those operating in emerging areas of artificial intelligence which lacked well-defined use cases or for which their contribution to the promoted characteristics was uncertain, but in respect of which the Investment Manager was of the view that an investment offered attractive investment opportunities for the Fund and aligned with the broader ESG elements of the Fund's investment process.

● **How did the sustainability indicators perform?**

The Investment Manager measured the attainment of the Fund's promoted characteristics by analysing the proportion of its investee companies' current or estimated future revenues derived from products, services or activities aligned with each promoted characteristic.

Over the reference period, a weighted average of 92.3% of the current or estimated future revenues of the companies in which the Fund had invested were derived from products, services or activities aligned with the three promoted characteristics¹.

The breakdown of revenue alignment per promoted characteristic is highlighted in the table below:

Characteristics	Quarterly Revenue Alignment ²				Average ³
	Mar-24	Jun-24	Sep-24	Dec-24	
Improve the efficiency, resilience, and sustainability of infrastructure	49.0%	49.7%	47.4%	44.3%	47.6%
Increasing business productivity and efficiency	22.9%	20.8%	21.1%	21.6%	21.6%
Improve individual prosperity, well-being, and social empowerment	22.3%	21.0%	23.2%	25.8%	23.1%
Total	94.2%	91.5%	91.7%	91.7%	92.3%

There were no investments that failed the exclusion criteria for the whole reference period.

¹ The Fund's alignment with its promoted characteristics is calculated by taking the weighted average alignment of the Fund with its characteristics at the end of each calendar and calculating the simple average of the quarterly alignment figures.

² The table shows the portfolio weighted average current or estimated future revenue alignment of the Fund, including cash, with each of the characteristics at the end of each quarter. The total alignment of the Fund with the characteristics is calculated by summing the alignment figures for each of the characteristics.

³ This shows the simple average of the Fund's quarterly portfolio current or estimated future revenue alignment with each of the characteristics. The total alignment of the Fund with the characteristics is calculated by summing the alignment figures for each of the characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Artificial Intelligence Fund continued

● ...and compared to previous periods?

Characteristics	Quarterly Revenue Alignment ⁴		Average ⁵
	Sep-23	Dec-23	
Improve the efficiency, resilience, and sustainability of infrastructure	42.0%	45.3%	43.6%
Increasing business productivity and efficiency	25.5%	25.5%	25.5%
Improve individual prosperity, well-being, and social empowerment	20.2%	19.4%	19.8%
Total	87.6%	90.1%	88.9%

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

⁴ The table shows the portfolio weighted average current or estimated future revenue alignment of the Fund, including cash, with each of the characteristics at the end of each quarter. The total alignment of the Fund with the characteristics is calculated by summing the alignment figures for each of the characteristics.

⁵ This shows the simple average of the Fund's quarterly portfolio current or estimated future revenue alignment with each of the characteristics. The total alignment of the Fund with the characteristics is calculated by summing the alignment figures for each of the characteristics.

— Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The greenhouse gas (“GHG”) emissions, GHG Footprint and GHG Intensity of investee companies were evaluated using data provided by a third-party data provider and in addition, investee companies’ own disclosures in their Annual Report, 10K or 20F, Sustainability or ESG Reports, particularly applicable for those companies where third party provided data was not available. Scope 1 and Scope 2 GHG emissions were considered for every investee company and Scope 3 GHG emissions for the most material emitters were considered. Scope 3 emissions account for approximately 85% of the aggregate Scope 1, 2, and 3 GHG emissions made by investee companies.

Investee companies’ GHG emissions data were then referenced against the Fund’s benchmark (MSCI ACWI TR Net Index), and the sector in which the company operates to identify those operating within High Impact Climate Sectors as defined by the Institutional Investors Group on Climate Change.

When these GHG emissions were flagged as being above a certain threshold or the investee company was in a High Impact Climate Sector, the Investment Manager assessed whether the company has an emissions mitigation or reduction strategy in place, whether that strategy or target is independently verified by a reputable third party such as the Science Based Targets initiative (SBTi), whether the company’s emission trend is on track with the reduction target, or whether the company’s emissions level and growth was a function of selling a product or service which may help their underlying clients in carbon reduction efforts.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Artificial Intelligence Fund continued

This latter point took on greater relevance last year as the Investment Manager continues to invest in companies involved in Artificial Intelligence (AI) infrastructure, applications, and the related supply chain. Some AI companies are experiencing rising emissions, primarily due to rapid business growth, even if their carbon intensity per unit of revenue is broadly on a declining trend. During the year, an in-depth project was undertaken to evaluate the environmental costs and benefits of this AI investment by specific reference to the ensuing growth in emissions between now and the end of this decade from AI investment compared to the eventual impact on emissions from potential commercial applications of AI in areas such as commercial building heating, ventilation, and air conditioning (HVAC) systems or the manufacturing process.

This project, while not providing definitive answers, suggested that a focus solely on emissions growth might give an incomplete view about the desirability of investment in AI-exposed companies from an environmental perspective. The initial conclusions suggest that the investment in AI, especially datacentre infrastructure and associated electrical power consumption, might add approximately +1% to the level of global emissions by 2030. However, research also indicated that the commercial application of AI may lead to eventual emissions reductions from 2030 onwards by at least this amount. This conclusion aligns with separate research published by PWC⁶ and Boston Consulting⁷. The impact of AI on the environment could then be considered at least neutral, and possibly a positive, at least taking emissions as the closest proxy.

Efforts were made by the Investment Manager to evaluate this thesis by reaching out to various companies for real examples or case studies. An ESG-specific call was held with Tesla following a claim made in their 2023 Impact Report⁸ that the application of AI in HVAC systems in their factories in Nevada, Texas, California, and Berlin could reduce energy use. This call informed us that the energy use did decline by 5-10% when AI Control of HVAC systems was implemented. A call was also held with Atlas Copco on the same subject. While not held within the Fund, this company has installed AI software in recent iterations of air compression management systems and confirmed in the call that broadly two-thirds of the energy efficiency improvement compared to previous versions can be accounted for by the use of AI.

Research from Schneider Electric⁹ also suggests that a -9% reduction in electrical power use has been experienced over a 4-year period when AI-powered HVAC systems have been deployed in a sample of 87 educational buildings across Sweden.

While the number of case studies is at this stage very small, initial evidence supports the conclusion that emissions reductions from commercial AI use from 2030 onwards may balance the higher emissions emanating from the initial build-out of AI infrastructure and associated power use in datacentres. The consideration of GHG emissions is at least partly undertaken through this lens.

⁷ <https://www.gstatic.com/gumdrop/sustainability/accelerating-climate-action-ai.pdf>

⁸ https://www.tesla.com/ns_videos/2023-tesla-impact-report.pdf Pg. 46

⁹ <https://www.se.com/ww/en/insights/sustainability/sustainability-research-institute/ai-powered-hvac-in-educational-buildings/>

For investee companies that flagged as high emitters and without a high proportion of their revenues being AI-related by way of mitigation, the Investment Manager conducted an additional review. This review seeks to verify the accuracy of any data provided by third parties, checks whether the investee company was intending to set new emissions reduction targets in the near-term and checks whether the investee company had committed to SBTi accreditation in the future or had other mitigation strategies, such as a commitment to close down or dispose of high emission activities.

When the Investment Manager was dissatisfied with the overall mitigation strategy or when the company provided inadequate disclosure of its emissions, and the Investment Manager deemed it necessary, engagement was attempted.

In 2023, among other years, the Investment Manager engaged with Samsung Electronics. The company provides comprehensive disclosure across every category of Scopes 1-3, but despite being one of the highest emitting technology companies globally in absolute terms, the company does not have either an internal or external Scope 3 target. This initial engagement had suggested a Scope 3 target would be forthcoming but when one was not produced, the Investment Manager followed up with a second engagement in 2024.

Following this second call, the Investment Manager concluded that the position and challenges remain the same for Samsung namely that a) while Scope 3 targets and SBTi accreditation are often discussed internally, a commitment may not be possible for some time as an SBTi target requires immediate reductions in emissions which Samsung claim may not be compatible with a growing business, b) Samsung believes that SBTi protocols are not sufficiently developed for semiconductor specific companies and, as such, they are engaging with other chip companies through the Semiconductor Climate Symposium¹⁰ including Intel, which in time may develop industry specific science-based protocols for setting targets, and c) Samsung continues to be constrained by the fact only approximately 10% of South Korean power generation comes from renewables (the lowest proportion of any OECD country). This is only likely to rise to 30% by 2030, which in itself will not facilitate Net Zero objectives within their domestic operations by 2030. The growth of the business and the constraint of operating in a country with low renewable power generation means that meaningful emissions reductions are unlikely to happen until the end of this decade at the earliest. The only mitigation is that Samsung has made a public commitment to Net Zero across the entire value chain by 2050.

Although not an investee company, the Investment Manager held an engagement with Doordash, which among other issues, covered the lack of comprehensive emission disclosure. While Scope 1+2 disclosure is provided, there is no Scope 3 disclosure or target. The company provided feedback that some investors, perhaps US-based, do not require this information and as such, the company would not provide comprehensive disclosure until or unless required by Californian and European law. This call was perhaps an early indication of evolving attitudes in the US, where some observers believe the new administration might encourage some companies to slow down or even reverse various ESG initiatives, including those involving emissions disclosure, target setting and performance.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Artificial Intelligence Fund continued

The Investment Manager considered the Fund's exposure to companies active in the fossil fuel sector by evaluating each investee company's revenue breakdown using third party data and the Investment Manager's knowledge of each company. The Fund has an exclusion policy of not investing in companies that derive more than 5% of their revenues from thermal coal production. The Investment Manager confirms that four of the Fund's investee companies had revenue which were attributable to the fossil fuel sector as at 31 December 2024. However, all companies held by the Fund complied with the Fund's exclusion limit on thermal coal production-derived revenues.

Using data provided either by third parties or the company's own disclosures, the Investment Manager considered the gender diversity of each investee company's board, noting that the thresholds applied by the Investment Manager differ depending on the company and its location so as to reflect regional norms on board diversity.

When an investee company's proportion of female directors fell below a certain threshold, the Investment Manager conducted an additional review of the circumstances to verify that the data was correct, and whether the investee company had a strategy or objective to improve board gender diversity. As a direct result of these reviews, which included recommendations, the Investment Manager voted at the AGMs of Harmonic Drive Systems and Alphabet against certain directors, with the intention of increasing female board representation. TSMC, which had flagged last year on board gender diversity, added two new female members to the board during the reporting period.

Every investee company is assessed for severe controversies and allegations of United Nations Global Compact (UNGC) norms violations using data and information provided by third parties, such as MSCI ESG Manager, or independently sourced by the Investment Manager. When deemed material, the issue is investigated further with an in-depth review of the specific circumstances. This review will make recommendations for further action which may include monitoring, voting, engagement and in extremis, divestment or exclusion. Several companies owned by the Fund appeared on MSCI's UNGC norms screen such as Amazon, Meta Platforms, Tencent, Tesco and Walmart and were reviewed accordingly.

As last year, investee companies, Amazon, and Tesla in particular, were flagged as being potential indirect beneficiaries of the illegal use of Uyghur labour within their Chinese supply chains following reports by the Australian Strategic Policy Institute (ASPI) in 2019, and Sheffield Hallam University in 2023. All the allegations in respect of these companies were again evaluated and documented by the Investment Manager. Having engaged with Tesla on this issue in 2023, no further engagement was deemed necessary as the Investment Manager has concluded that Tesla is already an industry leader in terms of supply chain audit and compliance. Last year's SFDR Annual Report for the Fund also concluded that no engagement was required with Amazon on the issue of supply chain labour and human rights. The Investment Manager believes that no new relevant information became known during the reporting period to impact this conclusion. In time, the Investment Manager believes that these companies will fall off MSCI's norms screen, at least for the allegations of the illegal use of Uyghur labour.

Amazon is also flagged by MSCI on its UNGC Watch List for potentially infringing employees' freedom of association and the effective recognition of the right to collective bargaining. The Investment Manager continues to monitor this issue and accordingly, at

Amazon's 2024 AGM where a shareholder proposed a resolution requesting that Amazon 'Commission a Third-Party Assessment on the Company's Commitment to Freedom of Association and Collective Bargaining', the Investment Manager voted in favour, in line with ISS, but against the management recommendation.

The Investment Manager continues to review various controversies involving Meta Platforms, and where appropriate will exercise voting powers accordingly. For example, at the 2024 AGM, against management recommendation, the Investment Manager voted for shareholder resolutions requesting a) disclosure on how the company measures and tracks metrics related to child safety on the company's platforms, b) greater transparency of the company's direct and indirect climate lobbying, and c) a report on the Human Rights Impact Assessment of Targeted Advertising.

Investee company, Walmart, is flagged on MSCI's UNGC Watch List for potential infringements of supply chain labour standards (again in reference to Uyghur labour), and discrimination and workforce diversity. Accordingly, at the 2024 AGM and against the management recommendation, the Fund's shares were voted for shareholder resolutions requesting a 'Human Rights Risk Assessment on the Impacts of Walmart's Supply Chain', and that the company 'Conduct and Report a Third-Party Racial Equity Audit'.

The Investment Manager will continue to engage with investee companies as and when new material controversies or potential norms-related violations arise.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ¹¹		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ¹²
GHG Emissions (TCO2e)	Scope 1	3,774.2	94.5%	32,246.4	99.7%	-88.3%
	Scope 2	6,401.2	94.5%	7,160.1	99.7%	-10.6%
	Scope 1 & 2	10,175.4	94.5%	39,430.9	99.7%	-74.2%
Carbon Footprint (TCO2e/ €m Invested)	Scope 1 & 2	11.3	94.5%	43.3	99.7%	-74.0%

¹¹ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2024. Benchmark: MSCI ACWI Net Total Return Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €910.9m as of 31 December 2024. The Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

¹² The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

eMemory	Information	2.0	Taiwan
TSMC	Information	2.0	Taiwan
Intuitive Surgical	Health Care	2.0	United States

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Asset allocation describes the share of investments in specific assets.

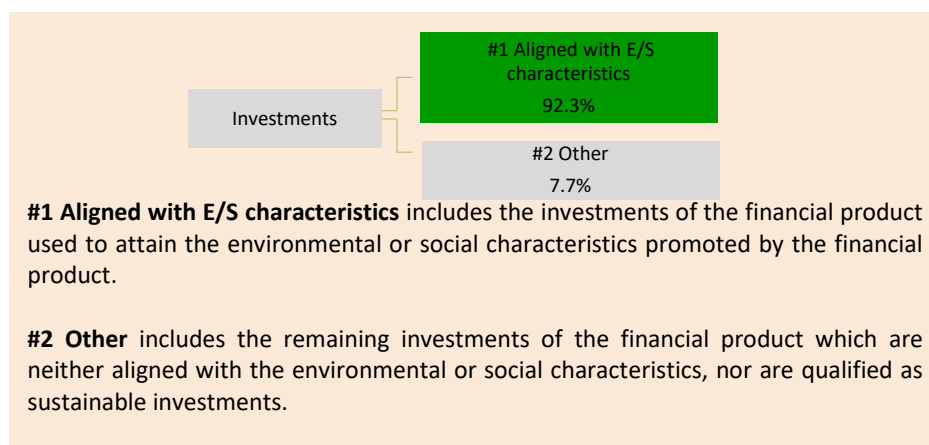

What was the asset allocation?

The Fund primarily seeks to invest in companies within the global investment universe. The Investment Manager assessed 100% of the companies in the Fund for revenue alignment towards the Fund's promoted environmental and/or social ("E/S") characteristics.

During the reference period, an average of 92.2% of current or estimated future revenues of the companies invested in by the Fund were aligned with the environmental or social characteristics promoted by the Fund.¹³

The Fund's investments identified as #2 Other in the below diagram were held in equity securities that did not contribute towards the Fund's promoted characteristics in cash or in derivative instruments.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ' #1 Aligned with E/S characteristics' etc.).

● In which economic sectors were the investments made?

Economic Sectors	% Assets ¹⁴
Information Technology	38.4
Industrials	19.9
Communication Services	16.1
Financials	6.3
Consumer Discretionary	5.9
Consumer Staples	5.6
Health Care	5.1
Materials	1.8
Cash and Cash equivalents	0.9

During the reporting period, the portfolio contained four companies with exposure to fossil fuels, being Caterpillar, Ecolab, Tesco and Walmart. Several other

¹³ The Fund's alignment with its promoted characteristics is calculated by taking the weighted average alignment of the Fund with its characteristics at the end of each calendar quarter and calculating the simple average of the quarterly alignment figures.

¹⁴ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Artificial Intelligence Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

companies that had been flagged last year were divested during the reporting period such as Baker Hughes, Emerson, Rotork and Schlumberger.

Tesco and Walmart have fossil fuel exposure due to their involvement in forecourt petrol and gas retailing. Otherwise, the Investment Manager actively considered investee companies' contribution to the global transition to a Net Zero economy.

For example, while Ecolab's exposure to oil and gas related revenues constitutes approximately 5% of group revenue according to MSCI, during the reporting period, the company achieved SBTi validation of its emissions targets. These targets are to reduce Scope 1+2 emissions by 50% over 2018-30 and to reduce Scope 3 emissions from purchased goods and services by 25% over 2022-30. Most importantly, their longer-term target of Net Zero across all scopes by 2050 has also been validated by the SBTi, implying 90% gross reductions in all scopes by then. Furthermore, while the current trajectory of emissions is broadly on track towards the company's targets, Ecolab also suggest that compared to its own emissions of 6.8 million tonnes (mt), its products (water and energy efficiency) helped customers avoid 3.8mt of emissions in 2023, on a pathway to helping its customers avoid 6.0mt by 2030. Should Ecolab be successful in its customer and own emissions' target, then the aggregate of customer avoided emissions may well exceed its own emissions by 2030. The Investment Manager acknowledges that there is no standardised methodology for reporting such avoided emissions.

MSCI estimate that approximately 10% of Caterpillar's revenue arises from fossil fuel related customers. The company has a target to reduce Scope 1+2 emissions by 30% over 2018-30 but there is no Scope 3 target which accounts for >99% of emissions. There is no commitment to net zero in any scope. Furthermore, Caterpillar's absolute emissions and intensity have both risen over the last two years. The position was acquired towards the end of the reporting period and as such, the Investment Manager may actively consider engagement with the company in the next reporting period given the lack of Scope 3 target, lack of net zero ambition and deteriorating trajectory of emissions over the last two years.

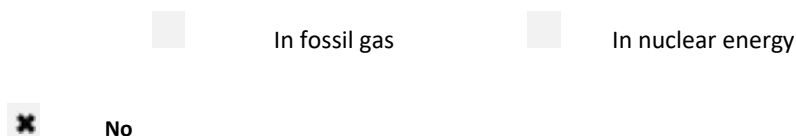

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

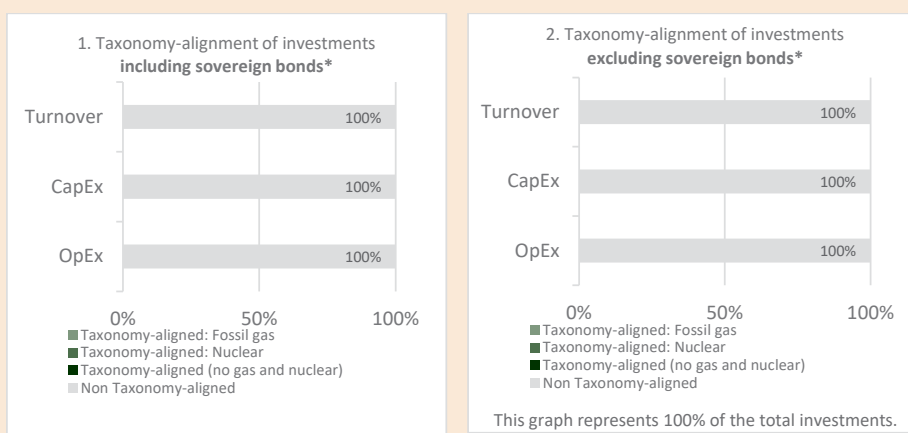

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹⁵?

Yes:

¹⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Artificial Intelligence Fund continued

What was the share of socially sustainable investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

An average of 7.7% of the Fund’s investments were classified as #2 Other over the reference period¹⁶. These investments include the portion of equity investments whose current or estimated future revenue, in part or on the whole, did not align with the promoted characteristics and cash and derivative instruments.

All equity investments are subject to the Fund’s exclusion criteria. There are no minimum environmental or social safeguards applicable to cash or derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In accordance with the investment strategy for the Fund, the Investment Manager assessed every investee company for the company’s current or estimated future revenue alignment with the three promoted characteristics described above. Every prospective investment was also assessed against the Fund’s exclusion criteria.

Every existing holding is assessed on the same basis and its alignment is monitored on an ongoing basis.

This internal review ensured that a minimum threshold of at least 50% of the Fund’s assets were always invested in companies aligned with the promoted characteristics and ensured compliance with the Fund’s exclusion parameters.

The following are examples of stocks held over the review period that demonstrate strong alignment with the Fund’s promoted characteristics:

Intuitive Surgical

Intuitive Surgical is the global leader in robotic-assisted surgery platforms that have been proven to deliver better clinical outcomes for patients. Some such benefits include lower rates of complications, reduced recovery times and shorter duration of hospital admission for patients undergoing procedures. Intuitive Surgical continues to broaden the accessibility of these benefits through the introduction of new robots and expanding the range of surgical procedures in which robotic-assisted surgery is used. R&D efforts have

¹⁶ This figure shows the average percentage of the Fund’s assets, including cash, on a portfolio weighted basis, categorised as ‘Other’ investments. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted ‘Other’ investments as at each calendar quarter end.

also been focused on accelerating and improving the surgical training pathway for trainee and newly-qualified medical professionals.

Schneider Electric

Schneider Electric's revenue is aligned to both improving the efficiency, resilience and sustainability of infrastructure (77% - Energy Management Division) and increasing business productivity and efficiency (23% - Industrial Automation Division). The Energy Management division provides electrical and power infrastructure components or systems that drives efficiency, electrification and digitisation at their customers. The Industrial Automation division helps customers solve the labour supply and productivity issue through the sale of equipment, services and software.

London Stock Exchange Group (LSEG)

LSEG's purpose is to drive financial stability, empower corporate and governmental financial institutions, and enable customers to create sustainable growth. LSEG operates critical infrastructure that underpins significant parts of global capital markets infrastructure, as well as data and analytics covering a wide range of financial and environmental data. Its products contribute to efforts to grow the green economy and deliver sustainable economic growth.

Monitoring of any ESG issues and controversies was undertaken during the reference period and is ongoing.

At every AGM or shareholder meeting, the Investment Manager reviewed the resolutions being proposed and documented when it voted the Fund's shares against the company's management and the reason for the vote.

On several occasions, and again against management recommendations, the Investment Manager voted in favour of improved ESG disclosure or practices that might enhance the Fund's environmental and/or social characteristics. For example, at the Amazon AGM, votes were cast in favour of a Report on Median and Adjusted Gender/Racial Pay Gaps, a Report on the Impact of Climate Change Strategy Consistent with Just Transition Guidelines, and in favour of commissioning a Third-Party Audit on Working Conditions. At the Tesla AGM, votes were cast in favour of a Report on Harassment and Discrimination Prevention Efforts and in favour of Tesla adopting a Non-Interference Policy Respecting Freedom of Association.

Not specifically connected to environmental and/or social characteristics of the Fund, but in the interests of enhancing good governance, voting powers were often exercised against the recommendation of management. As an example, the Investment Manager voted against management recommendations on advisory executive compensation resolutions at the AGMs of Amazon, Cloudflare, Cognex, London Stock Exchange, Munters, Richemont and Suess MicroTec. In addition, and not an exhaustive list, votes were cast against the re-election of several directors in an effort to improve board independence, to reduce average board tenure, to help eradicate share structures with differential voting rights, or to improve other governance issues such as classified boards when deemed inappropriate. Examples of AGMs where votes were cast against certain directors include

Alphabet, Harmonic Drive Systems, KLA, Meta, Nova Ltd, Nvidia, Richemont, Shima-Seiki and Tesla.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Asian Stars Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Asian Stars Fund (the “Fund”)

Legal entity identifier: 549300KAEBRJQSPZT179

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: ____%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies primarily situated in emerging markets that have the ability to remain competitive and deliver attractive profitability over the long term due to robust fundamental characteristics, but only where these robust fundamental characteristics were combined with good or improving environmental, social and governance (“ESG”) profiles based on the Investment Manager’s proprietary analysis.

The Fund had a bias towards companies with improving sustainability profiles, based on the Investment Manager’s proprietary analysis.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

The Fund excluded companies that have an unacceptable or controversial ESG profile following the application of quantitative and qualitative analysis by the Investment Manager and through the use of the Fund's exclusions list.

The Investment Manager determined a security had met the characteristics of the Fund if it scored equal to or greater than 5 on its proprietary 'Sustainability Delta' scoring framework.

All investments attained the characteristics of the Fund on an individual basis over the review period.

● *How did the sustainability indicators perform?*

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Manager evaluated the Fund's performance on the characteristics through scores in five specific areas of sustainability, including how a company contributed to future sustainable economic development (its 'Impact on Progress'), how a company managed its key risks and opportunities from an ESG perspective (its 'Material ESG Issues' – broken down into three separate areas: 'Environmental', 'Social' and 'Governance') and how a company ensured it acted as a responsible corporate citizen (its 'Business Ethics').

Each company was assigned two quantitative scores from 1-10 based on these five areas, one on a 'Current Level' basis and another on a 'Future Direction' basis.

The company's scores in these five areas are then taken together to provide the Investment Manager with a company's 'Sustainability Delta', which shows both the 'Current Level' and 'Future Direction' of a company from a sustainability perspective.

There are two ways in which portfolio-level indicator scores change from period to period. These are via i) upgrades/downgrades to the Investment Manager's internal stock scores on existing holdings, and ii) portfolio changes from buying lower scoring, selling higher scoring stocks or vice versa.

In the case of i), stock score upgrades are typically incremental, only apply to one element of the Investment Manager's complex scorecard for a stock, do not carry a large weight, and will require many upgrades to have a large impact on the overall indicator score.

In the case of ii), as the Fund has relatively low turnover, and it is unlikely that the spread on all new stocks bought versus all stocks sold during a given period will be very wide (in either direction), this driver too is moderate. Over this reporting period the Fund bought 24 new stocks and exited 26 positions.

As in previous years, the Investment Manager expects to continue to see small changes in the sustainability indicators at the portfolio level, even whilst at the underlying stock level there may be a number of investments which experience multi-point upgrades due to operational and strategic improvement. There has been no significant change to the scoring process or other methodology changes over the reporting period that impact scores for this year.

The Investment Manager prefers to invest in securities which display an improving trend with the score for Future Direction improving from Current Level (“Positive Delta”), though this is not a requirement for an investment to meet the Fund’s characteristics and the Fund may invest in securities where scores are stable across the forecast period (“Stable Delta”).

In cases where scores display a deteriorating trend, with the Future Direction score declining from the Current Level score (“Negative Delta”), the Investment Manager makes a commitment to engage with the company to resolve a path forward. The current breakdown of the Fund is shown in table below¹:

	2024	
	Current Level	Future Direction
Impact on progress	7.58	7.84
Environmental	5.64	6.42
Social	6.76	6.87
Governance	7.40	7.44
Business ethics	7.01	7.17

● ...and compared to previous periods?

A summary of the headline scores for comparison is shown below²:

	2021		2022		2023	
	Current Level	Future Direction	Current Level	Future Direction	Current Level	Future Direction
Impact on progress	7.39	7.70	7.54	7.81	7.72	7.98
Environmental	6.28	6.72	5.92	6.63	5.78	6.56
Social	6.82	7.17	6.62	6.90	6.57	6.80
Governance	7.16	7.43	7.25	7.30	7.27	7.33
Business ethics	6.75	6.99	6.90	7.03	6.84	7.09

The tables below display a summary of all changes that have been made in the way described over the reporting period.³

¹ The table shows the average score of the Fund, excluding cash, across the five sustainability indicators of the Fund over the reference period. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted scores as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December 2024).

² Please note the figures shown for 2021 in this table differ slightly to those shown in the Fund’s SFDR Disclosure Annex of the Company’s 2021 Annual Report. This difference is due to an update in the calculation methodology of the sustainability indicators. Sustainability indicator scores are now based on the portfolio weighted average of investee companies scores rather than a simple average. Please refer to page 398 of the 2021 Annual Report for full details of the portfolio scores against the five areas on a simple average basis.

³ Please note the figures presented may not sum precisely due to rounding.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

Current Level:

	Current Level 2023	Score Changes	Portfolio Changes	Current Level 2024
Impact on progress	7.72	0.00	-0.14	7.58
Environmental	5.78	-0.01	-0.13	5.64
Social	6.57	-0.02	0.21	6.76
Governance	7.27	0.06	0.07	7.40
Business ethics	6.84	0.07	0.10	7.01

Future Direction:

	Future Direction 2023	Score Changes	Portfolio Changes	Future Direction 2024
Impact on progress	7.98	- 0.00	- 0.14	7.84
Environmental	6.56	- 0.01	- 0.13	6.42
Social	6.80	- 0.06	0.13	6.87
Governance	7.33	0.06	0.06	7.44
Business ethics	7.09	0.06	0.02	7.17

As is consistent with the Fund's process and the expectations of the Investment Manager, the sustainability indicator scores shown at a headline, aggregated level remain very stable from the previous period to the reference period. The key drivers of these constituent parts are analysed below.

Impact on Progress

The Fund's Impact on Progress score decreased by 0.14 for Current Level and 0.14 for Future Direction as compared with 2023, to 7.58 and 7.84 respectively, as shown in the summary table above.

In both cases, this decrease came exclusively from portfolio changes as upgrades within existing holdings had an almost zero effect within Current Level and Future Direction.

The major reason for the negative impact from portfolio changes was that the Investment Manager exited some names with very high impact on progress scores such as lithium names, Gangfeng and Allkem, as well as other names related to the theme of resource management, like Sungrow (solar inverters) and Starpower (power semiconductors for solar, EV and wind power), and instead bought companies with a lower but still good impact to progress score like MediaTek, Zomato, Trip.com and 360 ONE WAM.

Environmental

The Fund's Environmental score decreased the most significantly, over the reference period, down by 0.14 for the Current Level and 0.14 for the Future Direction.

In composition, this was driven in both cases by net negative portfolio changes made to the Fund, and the effect from intra-fund upgrades/downgrades to existing holdings, which was a small negative.

MediaTek was a more material contributor to the small drag on the downgrades, particularly given the weight of the company within the Fund. The score moved from 9.0 to 8.67 for Current Level and Future Direction. The reason for this was that the Investment Manager adjusted the score for water management from 9 to 8 as the company's performance vs. peers deteriorated slightly.

The reason for the negative impact from portfolio changes is due to a combination of the trades the Investment Manager did in and out of the portfolio, but also the increase in weighting in some of the stocks that were kept throughout the year. The Manager sold some of the higher scoring names including Sungrow, HDFC Bank and Catapult, and bought lower scoring companies like Landmark Cars, Oceana Gold and Paladin Energy.

Another contributor was SK Hynix, which, due to the nature of its business, is a relatively low scoring company and, due to the strong rally in the stock, reached a 4.33% portfolio weight.

Social

The Social indicator increased by 0.19 for the Current Level and 0.13 for the Future Direction, and for both scores, portfolio changes were the major positive contributor to the changes in the current level, while score upgrades was a small detractor.

SK Hynix was a more material contributor to the small drag on the downgrades with the Current Level and Future Direction score decreasing from 7.33 to 7.0, due to a slight deterioration in its performance on health and safety.

The positive impact from portfolio changes are largely due to the Investment Manager exiting some positions due to lack of disclosure from the companies concerned, meaning the Investment Manager had deliberately scored them very conservatively, including Vinhomes, Vincom Retail and HPSP, and bought companies which perform well on the social factors relevant to them such as Zomato, Max Financial and 360 ONE WAM.

Governance

This indicator improved by 0.13 for Current Level and 0.12 for Future Direction and for this factor portfolio changes as well as score upgrades are important contributors.

TSMC was a more material contributor to the positive contribution from score changes, particularly given the weight of the company within the Fund. The score moved from 7.67 to 9.0 for Current Level and Future Direction. The reason was the introduction of ESG-related KPIs in management remuneration, the establishment of an independent nomination committee and the election of an additional female to the board of directors.

The reason for the positive impact from portfolio changes is largely due to the Investment Manager exiting some positions with lower quality governance such as Vinhomes and Vincom Retail, who, due to them belonging to the Vingroup, had some issues which meant that the Investment Manager marked down their scores to

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

reflect this, and bought better governed companies like Zomato, Paladin Energy and 360 ONE WAM.

Business Ethics

This indicator improved by 0.17 for Current Level and 0.08 for Future Direction, and for this factor, both portfolio changes as well as score upgrades are important contributors.

The biggest contributor to the score changes is Chroma, where the score changed from 7.33 to 9.0 as the company established an anticompetitive practices policy and the company's tax gap improved.

The reason for the positive impact from portfolio changes is due to the Investment Manager exiting some positions with lower scores such as HPSP, Ray Co and Andes Technology and buying some higher scoring companies like Alchip, Mobile World and Action Construction Equipment.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Investment Manager used an 'Impact on Progress' assessment within the Fund's proprietary Economic Value Added (EVA) Framework to identify and assess investment opportunities that, in the Investment Manager's view, contribute to sustainable environmental and social objectives.

The 'Impact on Progress' assessment is centred around three key pillars (Resource Management, Social Development and Economic Progress) informed by the United Nations Sustainable Development Goals ("UN SDGs"). Each pillar links to corresponding sustainable objectives. Companies were eligible to be considered as a sustainable investment if the company's products or services were deemed to contribute to one or more of the sustainable investment objectives. For the reference period, the sustainable objectives that the Fund contributed towards are highlighted in the table below.

Sustainable Investment Objective	% of Sustainable Investments in the Fund, categorised by Sustainable Investment Objective ⁴
Circular Economy	0.0%
Climate Change	30.6%
Health & Wellbeing	3.1%
Financial Inclusion	1.0%
Sustainable Future Food	0.0%
Total Sustainable investments	34.7%

⁴ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as sustainable investments with an environmental or social objective over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

The following are examples of sustainable investments and how they are contributing to the sustainable objective:

Daejoo Electronic Materials

Daejoo Electronics Materials contributes to the sustainable investment objective 'Climate Change' by developing and commercialising, as one of the first in the world, silicon anodes for electric vehicle batteries. Silicon anodes will increase driving range and reduce charging time, helping to drive up electric vehicle penetration.

Transportation is responsible for around 30% of global final energy demand⁵ and the Investment Manager views the adoption of electric vehicles as a significant contributor to increasing energy efficiency in the sector.

A recent study from YALE Climate Connection under Yale School of the Environment, Yale University, shows that around 80% of the energy in gasoline powered vehicles is lost to various inefficiencies and the number is only 11% for electric vehicles⁶. Roughly speaking, an electric vehicle is therefore 4.5x as energy efficient as an ICE powered vehicle.

Faraday Technology

Faraday Technology contributes to the sustainable investment objective 'Climate change' by having exposure both to smart meters (energy efficiency) and solar inverters (renewable energy) which, when combined, makes up around 30% of the company revenue.

Smart meter technology creates transparency for the energy consumer and research shows it reduces household energy consumption through behavioural changes. At the same time, it provides better data for the energy supplier to balance the energy system.

Solar inverters are needed for solar panel installations and are therefore directly helping renewable energy adoption.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm ("DNSH"), assessed each company primarily using third party data, to assess whether it had an adverse impact on the environment and society.

⁵ UNFCCC Global Transport and Climate Change (2021) [202202251552---SLOCAT Transport and Climate Change Global Status Report Global Overview.pdf](#)

⁶ YALE Climate Connections (2022) [Electrifying transportation reduces emissions AND saves massive amounts of energy » Yale Climate Connections](#)

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

Companies with controversies that have very severe adverse impacts on the environment and society will be excluded from consideration as sustainable investments by the Investment Manager.

The Investment Manager used the research of third party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over the assessment of third-party conclusions on a case-by-case basis.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of the Annex 1 Level 2 Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable, Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Where, in the Investment Manager's view, a company did not cause significant harm with respect to a specific PAI but the Investment Manager felt there was room for material improvement, it took the required steps to reduce or mitigate the PAI, such as engaging with the company, using the right to vote, seeking to improve disclosure of data by the company, or reducing exposure to the issuer where deemed appropriate or necessary.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing the alignment of portfolio companies with these global norms, and where necessary, conducted further due diligence to determine compliance with these norms.

To ensure that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, the Fund excluded companies deemed to have severe violations of the UNGC principles and OECD Guidelines using third party controversy research related to these global norms.

As a result of these assessments, the Investment Manager was comfortable that the sustainable investments within the portfolio appeared to not violate the above guidelines and principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity, energy consumption and carbon reduction initiatives. Furthermore, revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. Where material revenues were flagged, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero.

Similarly, where water usage was deemed material to an investee company by the Investment Manager, the Investment Manager sought to encourage the adoption of appropriate water management and water reduction policies.

The Investment Manager considered the board gender diversity of investee companies, and, where it deemed appropriate, used its tools of active ownership to encourage better diversity practices.

The Investment Manager considered the standards of the United Nations Global Compact, the Organisation for Economic Co-Operation and Development’s Guidelines for Multinational Enterprises, whistleblower protection, and anti-corruption and anti-bribery policies. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ⁷		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁸
GHG Emissions (TCO2e)	Scope 1	2,869.9	89.7%	35,653.3	100.0%	-92.0%
	Scope 2	3,112.1	89.7%	7,843.6	100.0%	-60.3%
	Scope 1 & 2	5,982.1	89.7%	43,623.2	100.0%	-86.3%
Carbon Footprint (TCO2e/ €m Invested)	Scope 1 & 2	16.2	89.7%	117.7	100.0%	-86.3%
GHG Intensity (TCO2e / €m Revenue)	Scope 1 & 2	71.9	89.7%	281.1	100.0%	-74.4%
Weighted Average Carbon Intensity (TCO2e / €m Revenue)	Scope 1 & 2	87.3	89.7%	287.8	100.0%	-69.7%
Female Board Representation (%)		21.4	89.7%	21.0	100.0%	2.3%

⁷ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2024. Benchmark: MSCI AC Asia ex Japan Total Return Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €370.6m as of 31 December 2024. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁸ The figures shown demonstrate the difference in the performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

**What were the top investments of this financial product?**

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2024

Largest investments	Sector	% Assets	Country
TSMC	Information Technology	9.9	Taiwan
Tencent	Communication Services	8.2	China
AIA Group	Financials	4.7	Hong Kong
ICICI Bank	Financials	4.0	India
Phoenix Mills	Real Estate	4.0	India
Reliance Industries	Energy	3.5	India
MediaTek	Information Technology	3.2	Taiwan
Meituan Dianping	Consumer Discretionary	3.1	China
eMemory Technology	Information Technology	3.0	Taiwan
Samsung Electronics	Information Technology	3.0	South Korea
MakeMyTrip	Consumer Discretionary	2.6	India
Chroma ATE	Information Technology	2.6	Taiwan
FPT Corp	Information Technology	2.3	Vietnam
IIFL Wealth Management	Financials	2.3	India
Ping An Insurance	Financials	2.2	China

**What was the proportion of sustainability-related investments?**

● **What was the asset allocation?**

100% of the companies the Fund invested in were assessed under the Investment Manager's EVA Framework, which is used to assess and deliver the environmental or social characteristics promoted by the Fund.

All investments, excluding cash, attained the characteristics of the Fund on an individual basis over the reference period.

During the reference period, the Fund invested 98.9% of its assets in equity and equity warrants. Therefore, on average 98.9%⁹ of the investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund.

Asset allocation describes the share of investments in specific assets.

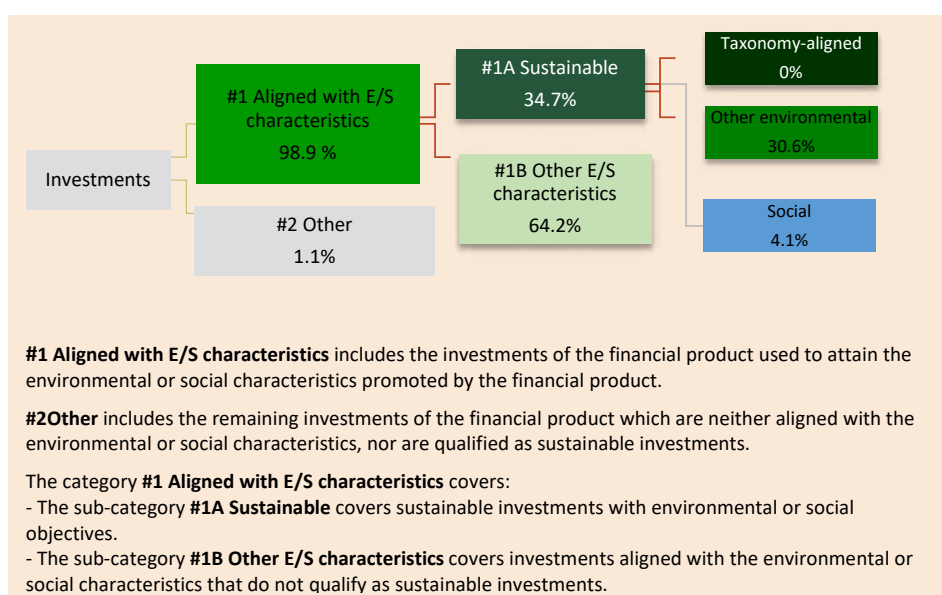

⁹ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, aligned with the Fund's characteristics. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December 2024).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

While the Fund does not have sustainable investing as its objective, the Fund invested 34.7%¹⁰ of its assets in sustainable investments with an environmental or social objective.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’, ‘#1A sustainable’ etc.)

In which economic sectors were the investments made?

Economic Sectors	% Assets ¹¹
Information Technology	34.2
Financials	18.6
Consumer Discretionary	17.4
Communication Services	9.8
Real Estate	6.5
Energy	4.6
Industrials	4.1
Health Care	3.7
Materials	1.1

¹⁰ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as sustainable investments with an environmental or social objective over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹¹ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

During the reference period the only material exposure to fossil fuels within the Fund was via Reliance Industries and Samsung E&A Co. (formerly Samsung Engineering Co).

Reliance Industries

Reliance Industries is engaged in the activities of hydrocarbon exploration and production, petroleum refining and marketing, petrochemicals, advanced materials and composites, renewables (solar and hydrogen), retail and digital services. The Company's segments include Oil to Chemicals (O2C), Oil and Gas, Retail and Digital Services. In relation to fossil fuels, the O2C segment includes refining, petrochemicals, fuel retailing, aviation fuel and bulk wholesale marketing. It includes a portfolio spanning transportation fuels, polymers, polyesters and elastomers. The Oil and Gas segment is engaged in the exploration, development and production of crude oil and natural gas.

Given the large, transformative transition this company is undertaking from a high emissions petrochemicals business to a leader in renewable energy such as solar, battery storage and hydrogen, the Investment Manager undertakes additional engagement by means of a long-term collective investor engagement programme under Climate Action 100+ to ensure the company is held to account and there is continued oversight. The Investment Manager co-leads this engagement with other investors and spent significant time during 2024 visiting management at their operations in India.

Samsung E&A Co Ltd

Samsung E&A Co Ltd, formerly Samsung Engineering Co Ltd, is a Korea-based company primarily engaged in non-chemical engineering business. It does however have a Chemical segment which is engaged in the provision of oil refining, petrochemicals and green solutions.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹²?

☐ Yes:

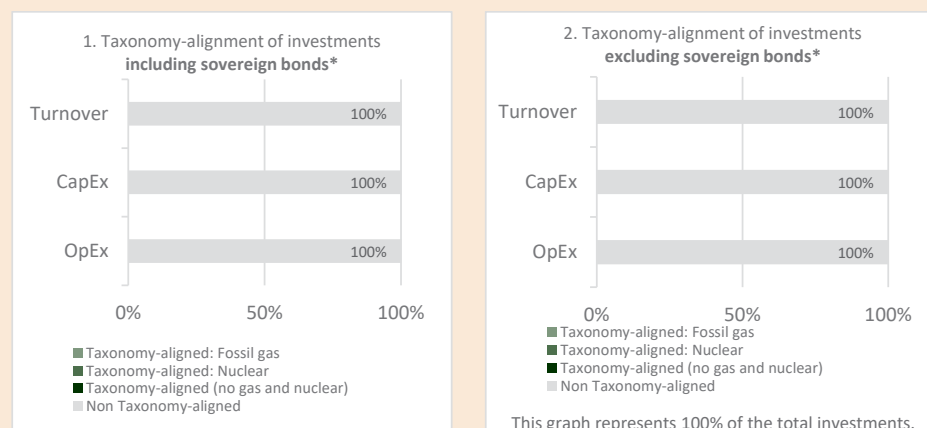

☐ In fossil gas ☐ In nuclear energy

☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation is 0% of the Fund’s net assets.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Over the reference period, the percentage of sustainable investments with an environmental objective not aligned with the EU taxonomy was 30.6.¹³

In order to satisfy itself that an investment is environmentally sustainable pursuant to the Taxonomy Regulation, the Investment Manager must (a) determine whether or not the investments underlying the Fund are in environmentally sustainable activities (b) identify the extent to which the investments of the Fund are in economic activities that qualify as environmentally sustainable and are aligned with the Taxonomy Regulation; (c) identify the proportion, as a percentage of the Fund's portfolio, of investments in environmentally sustainable activities which are aligned with the Taxonomy Regulation; and (d) identify the proportion, as a percentage of the Fund's portfolio, of enabling and transitional activities (as described in the Taxonomy Regulation).

At the present time, the Investment Manager cannot satisfy itself that the Fund's investments meet the criteria outlined above. Accordingly, the proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

What was the share of socially sustainable investments?

During the reference period the percentage of sustainable investments with a social objective within the Fund was 4.1%.¹⁴

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

¹³ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as sustainable investments with an environmental objective. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹⁴ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as sustainable investments with a social objective. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Asian Stars Fund continued

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 1.1% of the Fund’s investments were identified as #2 Other in the above diagram and were held in cash for liquidity purposes in line with the Fund’s Investment Policy. There are no minimum environmental or social safeguards applicable to these investments.¹⁵

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Using company specific knowledge and often engagement with company representatives, the Investment Manager assesses every prospective investee company, prior to purchase, using the Investment Manager’s proprietary quantitative Economic Value Added (EVA) Wheel Model. The Investment Manager used the EVA Wheel to evaluate how investee companies contributed to future sustainable economic development (its Impact on Progress), how a company managed its key risks and opportunities from an ESG perspective (its Material ESG Issues) and how a company ensures it acted as a responsible corporate citizen (its Business Ethics). Each company was assigned a quantitative score based on these three areas. The Investment Manager carried out this evaluation using a variety of sources, including information and data published by the companies themselves and third-party data and research providers. Every prospective investment was also assessed against the Fund’s exclusion criteria.

The following are engagement examples carried out during the reference period:

Action Construction

Action Construction Equipment (ACE) is the market leader pick and carry cranes manufacturer in India with over 63% market share in mobile cranes and more than 60% market share in the tower cranes segment. The business is family run (the founding family owns 65% of the company) and in the Investment Manager’s view is a well-run, capital-efficient business with strong growth prospects. As is typical in mid-sized, family-run businesses in India, ACE also has subpar sustainability disclosures. However, the Investment Manager sees this as an opportunity to engage with it and improve its rating in the proprietary EVA delta. Specifically, ACE has a Sustainability score of 6.1/10 which the Investment Manager thinks has room to move up over time.

The core area where the Investment Manager is engaging with ACE on is on the disclosure of GHG emissions. So far, the company does not report Scope 1,2 or 3 emissions. The Investment Manager engaged with the company to 1) report its GHG emissions and 2) subsequently, set targets and a plan of action to reduce the same. Given that the Investment Manager is one of its largest institutional shareholders, the founder did sound

¹⁵ This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, not aligned with the Fund’s characteristics. The average is calculated as a simple average of the percentage of the Fund’s assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

receptive to their feedback. However, the Investment Manager plans on waiting for tangible results before upgrading the company's score. To its credit, however, ACE's primary focus at this point is to prepare its equipment portfolio for the tighter emission and safety norms in India which will set in, in January 2025. From the Investment Manager's recent meeting, the company is confident in complying with the same and has also launched an electric construction vehicle.

Innovent Biologics

Innovent Biologics is an innovative Chinese biotech company with a strong pipeline of high potential molecules, especially in obesity and weight management with its newly approved GLP1. However, in October 2024, Innovent announced a related party transaction to spin off its international business with its senior management taking a direct 20% stake at a valuation that, in the Investment Manager's opinion, significantly undervalues its long-term potential.

While the Investment Manager appreciates management's effort to unlock and create value through its international growth strategy, which will create additional value for long-term shareholders, it took issue with the timing and valuation of the related party transaction. Even though the international business is a pre-revenue and loss-making business, the Investment Manager believes its strong pipeline of high potential molecules is worth significantly more than the valuation used for the transaction by benchmarking against similar transactions in the market.

The Investment Manager swiftly engaged with senior management teams and firmly voiced its frustration and objection to the transaction, and laid out a rationale for how this transaction would come at a high cost to shareholders and senior executives. In the meantime, the Investment Manager reached out and discussed its opinion with other shareholders too, garnering strong support from a wide range of other shareholders. With their active engagement and candid conversations with senior management during the week, the management team listened and cancelled this transaction.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Biotechnology Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Biotechnology Fund (the “Fund”)

Legal entity identifier: 5493006Y2HTKJGMQ4Y29

Sustainable

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 97.3% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies within the healthcare investment universe that contributed to:

- (i) Improvement of clinical outcomes for patients through innovation,
- (ii) Improvement of the affordability and accessibility of healthcare services; and
- (iii) Improvement of the efficiency of the delivery of healthcare services.

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

The Fund commits to a minimum proportion of 50% of its investments as sustainable investments, defined as aligning to one of the three characteristics listed above.

By investing in these companies, the Investment Manager believes that the Fund contributed to Goal 3 of the United Nations Sustainable Development Goals (UN SDGs) which is to “ensure healthy lives and promote well-being for all at all ages”. The UN SDGs are part of the United Nation’s 2030 Agenda for Sustainable Development, adopted by all UN member states in 2015, and comprise 17 goals which aim to tackle the world’s approach to the environmental and social matters. The full list of the 17 UN SDGs can be found at <https://sdgs.un.org/goals>.

For the avoidance of doubt, the Fund invested in companies within the healthcare investment universe whose products and services did not, in part or in whole, contribute to the promoted characteristics outlined above where the Investment Manager was of the opinion that such an investment nevertheless offered an attractive investment opportunity for the Fund.

● **How did the sustainability indicators perform?**

The Investment Manager monitors the Fund’s attainment of its characteristics by evaluating the portfolio’s weighted exposure to each of the three promoted characteristics listed above.

The Investment Manager’s calculation of the Fund’s portfolio weighted exposure takes account of both revenue and operational expenditure exposure to the characteristics for commercial stage companies (i.e. companies which have taken their product or service to market, commercialised their product or service or which receive revenues from already commercialised products or services) and of actual or proposed operational expenditure exposure to the characteristics for precommercial stage companies (i.e. companies which are still in the development stage conducting pre-clinical testing and clinical trials of their product). The Investment Manager also accounts for instances in which an investee company’s revenue and/or operational expenditure is exposed to more than one of the social characteristics described above.

Over the reference period, a weighted average of 88.0% of the revenue or operational expenditure of the Fund’s assets was exposed to products, services or activities aligned with the three promoted characteristics.¹

¹ This shows the percentage revenue or operational expenditure exposure of the Fund’s assets, including cash, on a portfolio weighted basis, to the characteristics promoted by the Fund. The average is calculated as a simple average of the Fund’s percentage exposure as at 31 March, 30 June, 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company’s alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company’s alignment with the characteristics.

	31-Mar-24	30-Jun-24	30-Sep-24	31-Dec-24	Average ²
Characteristic 1 Improve clinical outcomes for patients through innovation	85.3%	86.1%	86.6%	85.4%	85.8%
Characteristic 2 Improve the affordability and accessibility of healthcare services	0.9%	1.5%	1.6%	1.2%	1.3%
Characteristic 3 Improve the efficiency of the delivery of healthcare services	1.0%	0.8%	1.1%	0.6%	0.9%
Overall Alignment	87.3%	88.4%	89.3%	87.3%	88.0% ³

For the Fund, the overwhelming focus is expected to be on Characteristic 1 (Improving clinical outcomes for patients through innovation) as this is the key purpose of the industry. Where companies make significant effort to innovate and push strategies for affordability and accessibility of their medicines, the Investment Manager aims to reflect this with partial alignment with Characteristic 2. Investment in vaccine companies is expected to be the way in which Characteristic 3 can best be represented, and the alignment here will move with underlying investment in companies developing vaccines to prevent disease, rather than therapies used to treat disease.

As of the date of this report, 0% of the Fund's investments failed the exclusion criteria.

● ...and compared to previous periods?

	2022 Average	2023 Average
Characteristic 1 Improve clinical outcomes for patients through innovation	88.8%	86.6%
Characteristic 2 Improve the affordability and accessibility of healthcare services	0.5%	0.7%
Characteristic 3 Improve the efficiency of the delivery of healthcare services	2.8%	2.5%
Overall Alignment	92.1%	89.9%

Apart from minor fluctuations quarter to quarter, the alignment to each of the distinct characteristic of sustainable healthcare delivery has remained relatively constant over the period and has not deviated significantly from the 2023 averages.

² The Fund's average exposure to each characteristic is calculated by taking a simple average of the quarterly exposures. The average exposure to each characteristic on a quarterly basis is calculated by taking a portfolio weighted average of the exposure.

³ Figures do not sum exactly due to rounding.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

The Fund's sustainability indicators are not subject to assurance by an auditor or review by a third party.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Fund commits to a minimum proportion of 50% of its investments as sustainable investments. The Investment Manager considered a company eligible as a sustainable investment if the company contributed to the objectives:

- (i) Improvement of clinical outcomes for patients through innovation;
- (ii) Improvement of the affordability and accessibility of healthcare services; and
- (iii) Improvement of the efficiency of the delivery of healthcare services.

Companies held by the Fund were aligned to the three sustainability objectives in a variety of ways. Examples of how the Investment Manager established an investee company's contribution to a sustainable investment objective are provided below.

Investee companies were deemed to contribute to improving clinical outcomes, where they derived a sufficient portion of their revenues from or committed a sufficient proportion of their operational expenditure to, activities such as drug discovery, the research and sale of new drugs, the sale of over the counter products and the sale of diagnostic tools and services.

Investee companies were deemed to contribute to improving the affordability and accessibility of healthcare where they derived a sufficient portion of their revenues from, or committed a sufficient proportion of their operational expenditure to, activities such as the manufacture of generic medicines and the provision of health insurance services.

Investee companies that derived a sufficient portion of revenues from development of vaccines to prevent disease or molecular diagnostics to guide treatments, rather than therapies used to treat disease, are aligned with the improving the efficiency of delivery of healthcare services objective.

Once an investee company's alignment with a sustainable investment objective has been established, the Investment Manager will then also confirm that it passes the Do No Significant Harm test referred to in the section below and that it followed good governance practices.

Over the reference period, an average of 97.3% of the Fund's investments were classified as sustainable investments.⁴ Although on average the revenue alignment of biotechnology companies held during the reference period to the sustainability objectives was high, some sources of revenue were not considered to be aligned,

⁴ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were are classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

such as medical aesthetics and non-healthcare business segments, such as electronics manufacturing. While these revenue sources were not considered sustainable, a company that generated some revenues from activities not aligned to the three sustainability objectives outlined above was still eligible to be considered as a sustainable investment overall if the company also had business segments that were positively aligned to the sustainability objectives.

Examples of investments in the Fund and their alignment to the three sustainability objectives outlined above are detailed below.

Some companies held by the Fund showed strong alignment to a single objective. An example of this is a biopharmaceutical company, Nuvalent, which specialises in small molecule therapeutics for patients with cancer. Its aim is to create next-generation precision medicines, designed to selectively target cancer mutations, with a key focus on kinase-driven cancers. By developing highly selective inhibitors, Nuvalent aims to improve the efficacy and safety of cancer treatments, potentially leading to better clinical outcomes for patients, thus aligning with characteristic 1.

An example of a company with 100% alignment to improving the efficiency of healthcare delivery is Renalytix, a medical device company focused on optimising the clinical management of kidney disease. Its AI-driven diagnostic technology enables better prediction of kidney disease progression, aiding physicians in making better-informed decisions on treatment plans. By identifying patients at risk of developing kidney disease, or of the disease worsening, proactive intervention can be taken, aiming to prevent complications and hospitalisation.

Vaxcyte is currently fully aligned with characteristic 1, improving clinical outcomes through innovation. However, as the company hopefully progresses from clinical development stage to product launch and distribution, alignment is likely to evolve. The biotechnology company specialises in the development of innovative vaccines, with its lead vaccine currently in phase III clinical trials. If the vaccine is successfully developed and launched, it is expected to improve the efficiency of healthcare delivery by reducing the incidence of bacterial disease, potentially leading to fewer hospitalisations. Reducing the burden on healthcare systems would enable resources to be reallocated to other areas of medical need, enhancing the efficiency of healthcare delivery. Therefore, it is anticipated that alignment of the company will shift, with greater alignment to characteristic 3.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm (“DNSH”), assessed each company primarily using third party data, to assess whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as sustainable investments by the Investment Manager. In addition, the Fund employs an

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

exclusion policy that excludes investment altogether in companies that operate in sectors that are deemed to have a negative impact on the environment or society.

The Investment Manager used the research of third party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over whether an investee company had significantly harmed an environmental or social objective.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of Annex 1 Level 2 of the Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with these global norms, and where necessary, conducted further due diligence to determine compliance with these norms.

To ensure that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, the Fund excluded companies deemed to have severe violations of the UNGC principles and OECD Guidelines using third party controversy research related to these global norms.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives. Where material, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero.

The Investment Manager considered investee companies’ exposure to the fossil fuel sector by evaluating their revenue breakdown using third party data. In line with the Fund’s stated exclusions, 0% of the Fund’s investee companies had revenues attributed to the fossil fuel sector over the reporting period.

Furthermore, companies in the Healthcare sector have substantially lower energy and carbon intensities than market averages, so carbon emissions are on average much lower than most other industries. To illustrate this, the Scope 1 and 2 carbon emissions footprint of the MSCI ACWI Health Care Index in TCO2e/EVIC AUM measured less than 10% of the MSCI ACWI Index as a whole as at 31 December 2024⁵.

Despite low industry emissions, GHG emissions of investee companies were evaluated using either company reported data, or where this was not disclosed, through third party estimates based on business segment.

This emissions data was referenced against the Fund’s benchmark and the Healthcare sub-sector in which the investee company operates to identify those in sectors having a high impact on the climate. When these emissions were flagged as being above a certain threshold, the Investment Manager assessed whether the company had a carbon strategy in place, and the sophistication of that strategy, for example, whether the company measures and reports its carbon emissions, whether the company has a mitigation or

⁵ Source: MSCI Climate Change Metric: GHG emissions footprint. Where 100% coverage of a metric is not available, the index figures are estimated as if 100% coverage had been achieved and calculated on the basis of existing data coverage figures.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

reduction strategy in place, whether that strategy or target is independently verified by a reputable third party such as the Science Based Targets Initiative (SBTi), and whether the company's historic emission trend is on track with the reduction target.

Regarding remuneration practices, in particular as it relates to corporate executive remuneration, the Investment Manager continued to engage with companies primarily as part of the annual proxy voting process.

In 2024, an engagement was initiated with a small-cap European pharmaceuticals company, based on some key governance and compensation issues that emerged from the company's AGM. The Investment Manager arranged a call with the company's Head of Corporate and Financial Communications, and ESG. Concerns were raised about the lack of transparency regarding variable compensation and related party transactions, as well as worries about the independence of non-executive directors. The company acknowledged the issues raised and was already in discussions to make improvements. After the initial call, the Investment Manager provided a comprehensive document outlining best practices for the areas of concern. While aiming for best practices, the Investment Manager remains realistic, with the initial focus being progression rather than perfection. The Investment Manager also participated in the company's ESG questionnaire, sent with the aim of better understanding investors key ESG priorities. Looking forward, the Investment Manager plans to continue an open dialogue with the company and will organise another call before the next AGM to assess any changes, discuss progress and clarify expectations.

The Investment Manager considered the standards of the United Nations Global Compact (UNGC), and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises (OECD). If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company.

Every investee company was assessed for severe controversies and allegations of UNGC norms violations using data and information provided by third party data providers or independently sourced by the Investment Manager. When deemed material, the issue was investigated further with an in-depth review of the specific circumstances. During the reference period, no companies were assessed to have failed the UNGC standards.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ⁶		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁷
GHG Emissions (TCO2e)	Scope 1	1,173.1	87.7%	2,260.7	86.8%	-48.1%
	Scope 2	2,330.3	87.7%	4,052.5	86.8%	-42.5%
	Scope 1 & 2	3,503.4	87.7%	6,313.2	86.8%	-44.5%

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

The Fund primarily sought to invest in companies within the healthcare investment universe. The Investment Manager assessed 100% of the companies in the Fund for revenue alignment towards the Fund's promoted social characteristics.

During the reference period, a weighted average of 88.0% of the revenue or operational expenditure of the companies invested in were exposed to products, services or activities aligned with one or more of the three promoted characteristics⁹.

While the Fund does not have sustainable investment as its objective, the Fund invested 97.3% of its investments in sustainable investments with a social objective. Investments were considered sustainable if they were deemed by the Investment Manager to contribute to the sustainable investment objectives identified above and passed the Do No Significant Harm test and followed good governance practices.¹⁰

Asset allocation
describes the
share of
investments in
specific assets.

⁹ This shows the percentage revenue or operational expenditure exposure of the Fund's assets, including cash, on a portfolio weighted basis, to the Fund's characteristics. The average is calculated as a simple average of the Fund's percentage exposure as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December). In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company's alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company's alignment with the characteristics.

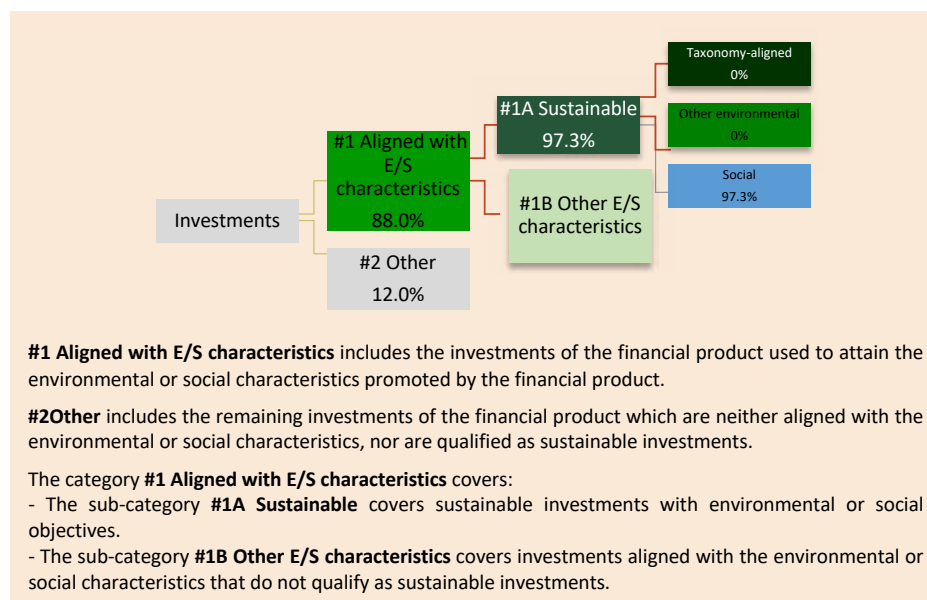

¹⁰ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)¹¹

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

In which economic sectors were the investments made?

Economic Sectors	% Assets ¹²
Health Care	99.1
Cash and Cash equivalents	0.9

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

¹¹ Please note that the sustainable investments figure may be greater than the E/S characteristics alignment figure. This is due to the E/S characteristics alignment figure being the percentage revenue or operational expenditure exposure of the Fund's assets, including cash, on a portfolio weighted basis, to the Fund's characteristics, whereas the full weight of a portfolio holding is considered a sustainable investment if it meets the criteria to be considered a sustainable investment.

¹² This figure shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Biotechnology Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

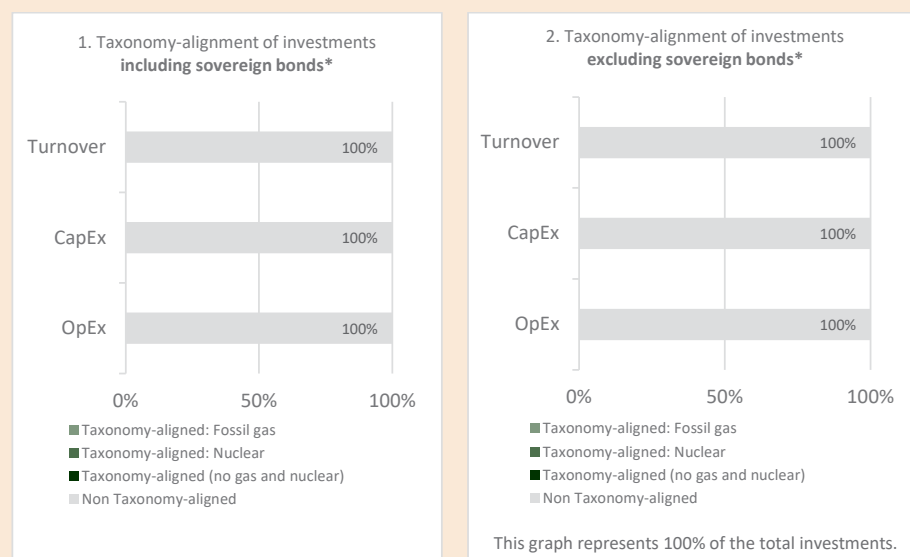

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹³?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- What was the share of investments made in transitional and enabling activities?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

¹³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in sustainable investments with an environmental objective, including environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund's sustainable investments are aligned to the sustainability objectives outlined above and are considered by the Investment Manager to be socially sustainable Investments.

The Fund invested 97.3% of its investments in sustainable investments with a social objective. Investments were considered sustainable if they met the revenue threshold contributing to the sustainability objectives and passed the Do No Significant Harm test and followed good governance practices.¹⁴

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund's investments identified as #2 Other in the above diagram were made up of portions of revenues or expenditure of companies the Fund had invested in that were not aligned with the promoted characteristics of the Fund and cash held for liquidity purposes.

During the reference period, an average of 12.0% of investments were not aligned with the promoted characteristics of the Fund.¹⁵

All equity investments are subject to minimum environmental or social safeguards through the Fund's exclusion criteria.

The Fund held cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these holdings.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

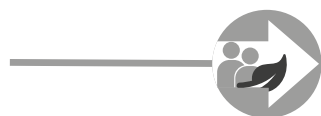

¹⁴ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were are classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹⁵ This figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, not aligned with the characteristics promoted by the Fund. The average is calculated as a simple average of the percentage of the Fund's assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

Biotechnology Fund continued

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Manager's methodology for assessing whether an investment contributes to a sustainable investment objective is harmonised with the assessment of its social characteristics.

Detailed examples of how companies held during the reference period were assessed and aligned with the Fund's characteristics and the sustainable investment objectives contributed to by the Fund are given above in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Using their sector expertise, company specific knowledge and often, engagement with company representatives, the Investment Manager assesses investee companies for revenue alignment or, where the company is at pre-revenue stage, operational expenditure alignment, with the characteristics and sustainable investment objectives described above. Every prospective investment was also assessed against the Fund's exclusion criteria.

As well as pre-trade exclusion checks, a quarterly oversight review ensured compliance with the Fund's exclusion parameters.

At AGMs or shareholder meetings, the Investment Manager reviewed the resolutions and documented voting intentions and any resultant engagements with investee companies.

Stewardship activities, including voting, interactions with companies, and follow up engagements emanating from this assessment were documented. Monitoring of any ESG issues and controversies was undertaken during the reference period and is ongoing.

In early 2024, an investee company announced its intention to delist from the UK Alternative Investment Market (AIM) given the lack of benefits to the business or shareholders from maintaining a listing. Prior to delisting the management team sought our advice on whether to proceed, and also as a major shareholder, offered us a non-executive board seat. We chose to take an observer seat, which ended up becoming a more active role than anticipated when in November 2024, another major shareholder initiated an aggressive move to replace senior management and the board. As a major shareholder we worked to calm the situation by engaging with management, the Board and the disruptive shareholder, hopefully facilitating a more constructive situation to emerge whereby the company can continue to progress operations with some degree of continuity in the near-term.

As part of the due diligence for evaluating a biopharmaceutical company as a potential candidate for portfolio inclusion, the Investment Manager interacted with the company

on patient access and affordability. In a meeting with the management team in December 2024, discussions focussed on their drug for COPD treatment, addressing key access issues such as coverage on various insurance programmes and the availability of patient assistance programmes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmarks has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Legal entity identifier: 549300CJYC75WWHYIR44

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> Yes	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The Fund excluded companies that had an unacceptable or controversial ESG profile following the application of quantitative and qualitative analysis by the Investment Manager and through the use of the Fund's exclusions list.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How did the sustainability indicators perform?*

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund achieved its sustainability characteristics across all indicators during the reporting period.

As at the date of this report, 0% of the Fund's investments failed the Fund's exclusion criteria.

The Investment Manager evaluated the Fund's performance on the characteristics through scores in five specific areas of sustainability, including how a company contributed to future sustainable economic development (its 'Impact on Progress'), how a company managed its key risks and opportunities from an ESG perspective (its 'Material ESG Issues' – broken down into three separate areas: 'Environmental', 'Social' and 'Governance') and how a company ensured it acted as a responsible corporate citizen (its 'Business Ethics'). Each company was assigned two quantitative scores from 1-10 based on these five areas, one on a 'Current Level' basis and another on a 'Future Direction' basis.

The company's scores in these five areas are then taken together to provide the Investment Manager with a company's 'Sustainability Delta', which shows the holistic profile of a company from a sustainability perspective.

A summary of the headline scores for 2024 is shown below¹:

	Current Level	Future Direction
Impact on Progress	6.79	6.70
Environmental	5.94	6.08
Social	6.53	6.28
Governance	6.98	6.44
Business ethics	7.17	6.68

● *...and compared to previous periods?*

A comparison of the headline scores for 2023, 2022 and 2021 is shown below². Please note that the Fund's sustainability indicators were updated during 2022 to incorporate both 'Current Level' and 'Future Direction' scores for each

¹ The table shows the average score of the Fund, excluding cash, across the five sustainability indicators of the Fund over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted scores as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

² The figures show the average scores of the Fund, excluding cash, across the five sustainability indicators of the Fund over the relevant reference periods. The average is calculated as a simple average of the Fund's quarterly portfolio weighted scores as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

China Stars Fund continued

sustainability indicator. The Fund did not consider 'Future Direction' as a sustainability indicator in 2021 and, as a result, there are no 'Future Direction' scores for 2021:

	2021 Current Level	2022 Current Level	2022 Future Direction	2023 Current Level	2023 Future Direction
Impact on Progress	6.6	6.80	6.63	6.89	6.80
Environmental	6.4	5.82	5.88	5.86	6.09
Social	6.4	6.62	6.29	6.58	6.38
Governance	6.4	6.86	6.27	6.98	6.47
Business ethics	6.9	7.24	6.54	7.24	6.79

Impact on Progress

The Fund's positive bias in Impact on Progress dropped modestly in 2024, as the Investment Manager increased the size of investments in traditional industries while reducing investments in companies with high exposure to industrial automation and robotics, electric vehicle production, and digital technology industries, as the market environment shifted towards strong cash flows and high dividend yield companies. The Fund remains highly aligned with the long-term transition towards a more sustainable and fairer economy and society.

Environmental

The Fund's Environmental score improved slightly over the reference period. These changes were primarily driven by reduced total investments in sectors including construction and retailing with higher environmental footprints.

By some distance, the largest negative effects here came from Alibaba and Tencent, due to a combination of poor disclosure, very poor greenhouse gas ("GHG") emissions intensity versus peers, and behind trend initiatives on energy mix and data centre management. The positive is that both companies have made significant commitments to improvement in this area, with stated net carbon zero targets.

Social

The portfolio's social score dropped marginally but maintained a strong overall positive bias. Selling out of the Fund's investment in Dadi Early Childhood Education contributed to this small decline. As a leader in providing affordable childcare and facilitating healthy child development, Dadi scored highly on its positive social impact. However, given the declining childbirth in China, the Investment Manager was concerned about the long-term business growth prospect of Dadi and decided to divest.

Governance

The Fund's Governance score remained essentially flat. The Fund is made up of well-aligned owner-operated investee companies with high integrity and strong track records. These companies not only score highly on alignment and long-term

incentives but also have a good history and established structures to ensure minority shareholders are treated fairly. A notable example is Hongfa Technology, a global leader in electric relays that enables the electrification of the world. It is still about 30% owned by the founder and senior management team, pays consistent dividends, and has organically grown the business consistently with successful expansion into new end markets without acquisitions.

Business Ethics

The Fund's Business Ethics score dropped slightly but maintained a strong overall positive bias. Good businesses understand that behaving as a good corporate citizen is not only a moral obligation but also serves the long-term orientated profit motive. For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

China Stars Fund continued

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund did not consider principal adverse impacts on sustainability factors during the reference period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31 December 2024

Largest investments	Sector	% Assets	Country
Tencent	Communication Services	9.9	China
China Construction Bank	Financials	4.9	China

China Merchants Bank	Financials	2.8	China
Prosus NV	Consumer Discretionary	2.6	Netherlands
Pinduoduo	Consumer Discretionary	2.5	China
H World Group	Consumer Discretionary	2.5	China

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

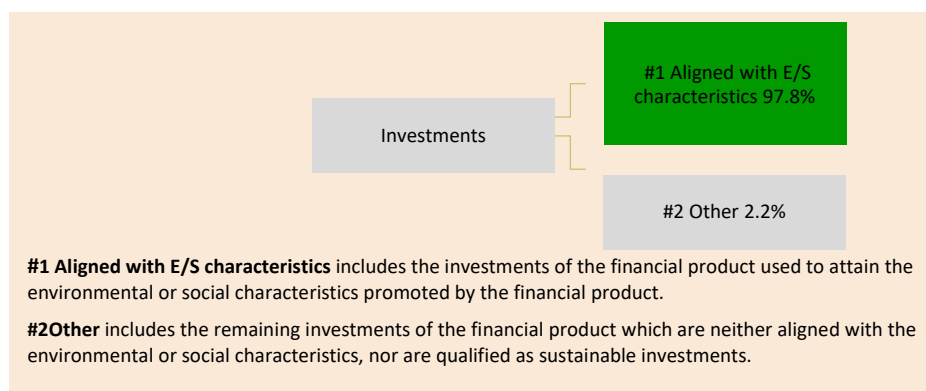

100% of the companies the Fund invested in were assessed under the Investment Manager's EVA Framework, which is used to assess and deliver the environmental or social characteristics promoted by the Fund.

All investments, excluding cash, attained the characteristics of the Fund on an individual basis over the reference period.

During the reference period the Fund averaged 97.8% in equity and equity warrants. Therefore, on average 97.8%³ of the investments of the Fund attained the environmental or social characteristics promoted by the Fund.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. '#1 Aligned with E/S characteristics' etc.)

Asset allocation describes the share of investments in specific assets.

³ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, aligned with the Fund's characteristics. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Information Technology	8.3
Health Care	6.4
Consumer Staples	3.6
Real Estate	2.5
Materials	2.3
Cash and Cash equivalents	1.3

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

0% of the Fund's investee companies had exposure to fossil fuel related activities.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁵?

Yes:

In fossil gas

In nuclear energy

No

⁴ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

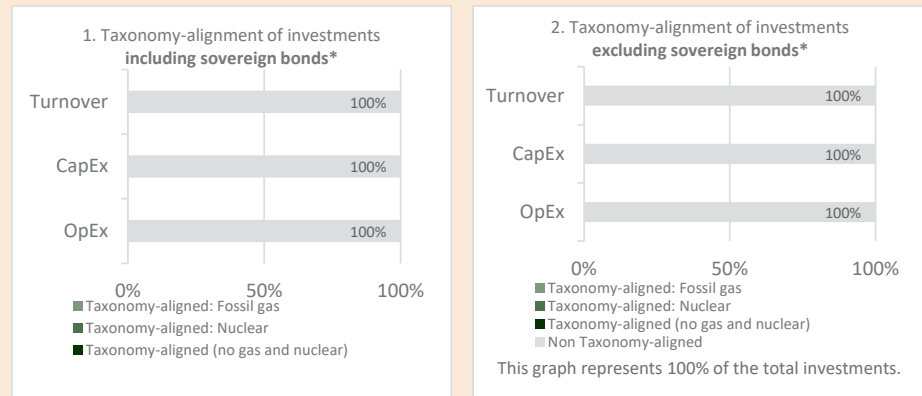

⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

**For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures*

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in sustainable investments with a social objective.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

China Stars Fund continued

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Over the reference period, an average of 2.2%⁶ was held in cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The assessment of sustainability factors is not a one-time event and does not stop at the point of purchase. Ongoing engagement and monitoring are a constant and valuable part of the Investment Manager’s work, as it is very focused on how companies see the future and how they allocate capital accordingly to mitigate risk and benefit from revenue opportunities as part of a sustainable future. These are the types of companies that will score highly on the Investment Manager’s proprietary framework.

In this way, the Investment Manager views engagement as entirely integrated with its ongoing, fundamental dialogue with the Fund’s investments. The Investment Manager holds hundreds of meetings each year alongside site visits, meetings with competitors, suppliers, customers, industry experts and lower-tier employees as part of its ongoing engagement and due diligence. Engagement can take the form of meetings, calls, emails or voting as a shareholder.

The Investment Manager aims to be regular and proactive in its efforts rather than only engaging post an ESG ‘event’. However, there are a few situations each year where the Investment Manager feels it can add value as minority shareholders through more active forms of engagements.

In circumstances where a company is involved in a negative and material ESG incident which compromises the integrity of the whole business, or, less dramatically, where the Investment Manager loses confidence in its investment thesis owing to an issue related to ESG practices and therefore its belief in a company’s ability to generate long-term sustainable EVA, or its comfort with it as a corporate citizen, its policy is to immediately divest.

An example of a highly active engagement during the reporting period is given below.

Innovent Biologics

Innovent Biologics is an innovative Chinese biotech company with a strong pipeline of high potential molecules, especially in obesity and weight management with its newly approved GLP1. However, in October 2024, Innovent announced a related party transaction to spin off its international business with its senior management taking a

⁶ This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, not aligned with the Fund’s characteristics. The average is calculated as a simple average of the percentage of the Fund’s assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

direct 20% stake at a valuation that, in the Investment Manager's opinion, significantly undervalues its long-term potential.

While the Investment Manager appreciates management's effort to unlock and create value through its international growth strategy, which will create additional value for long-term shareholders, it took issue with the timing and valuation of the related party transaction. Even though the international business is a pre-revenue and loss-making business, the Investment Manager believes its strong pipeline of high potential molecules is worth significantly more than the valuation used in the transaction by benchmarking against similar transactions in the market.

The Investment Manager swiftly engaged with senior management teams and firmly voiced its frustration and objection to the transaction, and laid out a rationale for how this transaction would come at a high cost to shareholders and senior executives. In the meantime, the Investment Manager reached out and discussed its opinion with other shareholders too, garnering strong support from a wide range of other shareholders. With their active engagement and candid conversations with senior management during the week, the management team listened and cancelled this transaction.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies primarily situated in emerging markets that have the ability to remain competitive and deliver attractive profitability over the long term due to robust fundamental characteristics, but only where these robust fundamental characteristics were combined with good or improving environmental, social and governance (“ESG”) profiles based on the Investment Manager’s proprietary analysis.

The Fund had a bias towards companies with improving sustainability profiles, based on the Investment Manager’s proprietary analysis.

The Fund excluded companies that have an unacceptable or controversial ESG profile following the application of quantitative and qualitative analysis by the Investment Manager and through the use of the Fund's exclusions list.

The Investment Manager determined a security had met the characteristics of the Fund if it scored equal to or greater than 5 on its proprietary 'Sustainability Delta' scoring framework.

All investments attained the characteristics of the Fund on an individual basis over the review period.

● *How did the sustainability indicators perform?*

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Manager evaluated the Fund's performance on the characteristics through scores in five specific areas of sustainability including how a company contributed to future sustainable economic development (its 'Impact on Progress'), how a company managed its key risks and opportunities from an ESG perspective (its 'Material ESG Issues' – broken down into three separate areas: 'Environmental', 'Social' and 'Governance') and how a company ensured it acted as a responsible corporate citizen (its 'Business Ethics').

Each company was assigned two quantitative scores from 1-10 based on these five areas, one on a 'Current Level' basis and another on a 'Future Direction' basis.

The company's scores in these five areas are then taken together to provide the Investment Manager with a company's 'Sustainability Delta', which shows both the 'Current Level' and 'Future Direction' of a company from a sustainability perspective.

There are two ways in which portfolio-level indicator scores change from period to period. These are via i) upgrades/downgrades to the Investment Manager's internal stock scores on existing holdings, and ii) portfolio changes from buying lower scoring, selling higher scoring stocks or vice versa.

In the case of i), stock score upgrades are typically incremental, only apply to one element of the Investment Manager's complex scorecard for a stock, do not carry a large weight, and will require many upgrades to have a large impact on the overall indicator score.

In the case of ii), as the Fund has relatively low turnover, and it is unlikely that the spread on all new stocks bought versus all stocks sold during a given period will be very wide (in either direction), this driver too is moderate. Over this reporting period the Fund bought 18 new stocks and exited 20 positions.

Governance	7.32	0.04	- 0.04	7.32
Business ethics	6.86	0.08	0.00	6.94

Future Direction:

	Future Direction 2023	Score Changes	Portfolio Changes	Future Direction 2024
Impact on progress	8.04	- 0.00	- 0.09	7.94
Environmental	6.92 ⁴	0.00	- 0.14	6.78
Social	6.94	- 0.06	- 0.06	6.83
Governance	7.48	0.07	- 0.07	7.48
Business ethics	7.11 ⁵	0.05	0.00	7.16

¹ The table shows the average score of the Fund, excluding cash, across the five sustainability indicators of the Fund over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted scores as at each calendar quarter end.

² Please note the figures presented may not sum precisely due to rounding.

³ Please note that due to an error, the Fund's Current Level Environmental 2023 score was reported as 6.29 in last year's annual report. The correct figure for Current Level Environmental 2023 has been reported here but will not align with reports issued in relation to the Fund prior to this date. Please use the Current Level Environmental 2023 figure provided in this report for all analysis and comparisons in relation to this period.

⁴ Please note that due to an error, the Fund's Future Direction Environmental 2023 score was reported as 6.89 in last year's annual report. The correct figure for Future Direction Environmental 2023 has been reported here but will not align with reports issued in relation to the Fund prior to this date. Please use the Future Direction Environmental 2023 figure provided in this report for all analysis and comparisons in relation to this period.

⁵ Please note that due to an error, the Fund's Future Direction Business Ethics 2023 score was reported as 7.07 in last year's annual report. The correct figure for Future Direction Business Ethics 2023 has been reported here but will not align with reports issued in relation to the Fund prior to this date. Please use the Future Direction Business Ethics 2023 figure provided in this report for all analysis and comparisons in relation to this period.

As is consistent with the Fund's process and the expectations of the Investment Manager, the sustainability indicator scores shown at a headline, aggregated level remain very stable from the previous period to the reference period. The key drivers of these constituent parts are analysed below.

Impact on Progress

The Fund's Impact on Progress score decreased by 0.11 for Current Level and 0.09 for Future Direction as compared with 2023, to 7.64 and 7.94, as shown in the summary table above.

In both cases, this decrease came exclusively from portfolio changes as upgrades within existing holdings had an almost zero effect within Current Level and Future Direction.

The major reason for the negative impact from portfolio changes was the Investment Manager exited some names with very high impact on progress scores such as Allkem, Merdekka Copper and HPSP, and instead bought companies with lower but still good impact to progress scores like MediaTek, Zomato, Action Construction and 360 ONE WAM.

Environmental

The Fund's Environmental score decreased the most of any over the reference period, down by 0.13 for the Current Level and 0.14 for the Future Direction.

In composition, this was driven in both cases by net negative portfolio changes made to the Fund, offsetting the effect from intra-fund upgrade/downgrades to existing holdings, which was a small positive. Daejoo Electronic Materials was a more material contributor to the small positive effect from score upgrades as the company for the first time started publishing data on its environmental footprint and its actual performance surprised positively leading to a score upgrade.

The reason for the negative impact from portfolio changes is due to the Investment Manager exiting some high scoring names like B3, Oncoclinicas and HDFC Bank, and buying lower scoring companies like SK Square, Paladin Energy and Eugene Technology.

Social

The Social indicator decreased by 0.09 for the Current Level and 0.11 for the Future Direction and for both scores, portfolio changes were the major negative contributor to the changes, while score upgrades were a small detractor.

SK Hynix was a more material contributor to the small drag on the downgrades with the Current Level and Future Direction score decreasing from 7.33 to 7.0 due to a slight deterioration in its performance on health and safety.

The reason for the negative impact from portfolio changes is largely due to the Investment Manager exiting some positions with relatively high social scores such as Grupo Aeroportuario del Centro Norte, B3 and Bioceres, and buying relatively lower scoring companies like Paladin Energy, Bank Rakyat and Eugene Technology.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market ex-China Stars Fund continued

Governance

This indicator remained flat both for Current Level and Future Direction with positive net score upgrades being completely offset by net negative portfolio changes.

TSMC was a more material contributor to the positive contribution from score changes, particularly given the weight of the company within the Fund. The scores moved from 7.67 to 9.0 for Current Level and Future Direction. The reason was the introduction of ESG-related KPIs in management remuneration, the establishment of an independent nomination committee, and the election of an additional female to the board of directors.

The reason for the negative impact from portfolio changes is largely due to the Investment Manager exiting some positions with higher quality governance like Oncoclinicas, B3 and Bioceres and buying relatively lower quality governance companies like Bank Rakyat, BBB foods and Alchip.

Business Ethics

This indicator improved by 0.08 for Current Level and 0.05 for Future Direction and for this factor the changes was entirely due to upgrades.

The biggest contributor to the score changes is Chroma, where the score changed from 7.33 to 9.0, as the company established an anticompetitive practices policy and the company's tax gap improved.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Investment Manager used an 'Impact on Progress' assessment within the Fund's proprietary Economic Value Added (EVA) Framework to identify and assess investment opportunities that, in the Investment Manager's view, contribute to sustainable environmental and social objectives.

The 'Impact on Progress' assessment is centred around three key pillars (Resource Management, Social Development and Economic Progress) informed by the United Nations Sustainable Development Goals ("UN SDGs"). Each pillar links to corresponding sustainable investment objectives. Companies were eligible to be considered as a sustainable investment if the company's products or services were deemed to contribute to one or more of the sustainable investment objectives. For the reference period, the sustainable investment objectives that the Fund contributed towards are highlighted in the table below.

Sustainable Investment Objective	% of Sustainable Investments in the Fund, categorised by Sustainable Investment Objective ⁶
Circular Economy	0.0%
Climate Change	32.9%
Health & Wellbeing	3.1%
Financial Inclusion	2.7%
Sustainable Future Food	0.6%
Total Sustainable investments	39.4%

Daejoo Electronic Materials

Daejoo Electronics Materials contributes to the sustainable investment objective 'Climate Change' by developing and commercialising, as one of the first in the world, silicon anodes for electric vehicle batteries. Silicon anodes will increase driving range and reduce charging time, helping to drive up electric vehicle penetration.

Transportation is responsible for around 30% of global final energy demand⁷, and the Investment Manager views the adoption of electric vehicles as a significant contributor to increasing energy efficiency in the sector.

A recent study from YALE Climate Connection under Yale School of the Environment, Yale University shows that around 80% of the energy in gasoline powered vehicles is lost to various inefficiencies and the number is only 11% for electric vehicles⁸. Roughly speaking an electric vehicle is therefore 4.5x as energy efficient as an ICE powered vehicle.

Alinma Bank

In 2017, the percentage of total adults with a bank account in Saudi Arabia was 72%, far below the developed market average of >90%⁹. Financial inclusion for adult women in the Kingdom is far lower at 60%. Financial literacy in Saudi Arabia is astonishingly low at 31%, and below even many lower income emerging market peers. In 2022, an IMF consultation paper on Saudi Arabia called for improvement to financial inclusion – particularly for SMEs and women, and an earlier 2020 project by the G20 Partnership for Financial Inclusion (GPFI) identified the digital financial inclusion of women, youths and SMEs as the key priorities.

⁶ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments with an environmental or social objective over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market ex-China Stars Fund continued

Alinma Bank's retail strategy very explicitly targets exactly these areas, prioritising growth in serving the under-banked digital youth and women's segments.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm ("DNSH"), assessed each company primarily using third party data, to assess whether it had an adverse impact on the environment and society.

Companies with controversies that have very severe adverse impacts on the environment and society will be excluded from consideration as Sustainable Investments by the Investment Manager.

The Investment Manager used the research of third party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over the assessment of third party conclusions on a case-by-case basis.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of the Annex 1 Level 2 Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable, Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Where, in the Investment Manager's view, a company did not cause significant harm with respect to a specific PAI but the Investment Manager felt there was room for material improvement, it took the required steps to reduce or mitigate the PAI, such as engaging with the company, using the right to vote, seeking to improve disclosure of data by the company, or reducing exposure to the issuer where deemed appropriate or necessary.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing the alignment of portfolio companies with these global norms, and where necessary, conducting further due diligence to determine compliance with these norms.

To ensure that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, the Fund excluded companies deemed to have severe violations of the UNGC principles and OECD Guidelines using third party controversy research related to these global norms.

As a result of these assessments, the Investment Manager was comfortable that the sustainable investments within the portfolio appeared to not violate the above guidelines and principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

When assessing a company's impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity, energy consumption and carbon reduction initiatives. Furthermore, revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. Where material revenues were flagged, the Investment Manager assessed the company's carbon reduction policies or targets related to achieving net zero.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market ex-China Stars Fund continued

Similarly, where water usage was deemed material to an investee company by the Investment Manager, the Investment Manager sought to encourage the adoption of appropriate water management and water reduction policies.

The Investment Manager considered the board gender diversity of investee companies, and, where it deemed appropriate, used its tools of active ownership to encourage better diversity practices.

The Investment Manager considered the standards of the United Nations Global Compact, the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises, whistleblower protection, and anti-corruption and anti-bribery policies. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ¹⁰		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ¹¹
GHG Emissions (TCO2e)	Scope 1	14.9	89.0%	123.7	100.0%	-87.9%
	Scope 2	10.2	89.0%	27.0	100.0%	-62.2%
	Scope 1 & 2	25.2	89.0%	151.3	100.0%	-83.4%
Carbon Footprint (TCO2e/ €m Invested)	Scope 1 & 2	20.5	89.0%	121.9	100.0%	-83.2%
GHG Intensity (TCO2e / €m Revenue)	Scope 1 & 2	96.8	89.0%	301.9	100.0%	-68.0%
Weighted Average Carbon Intensity (TCO2e / €m Revenue)	Scope 1 & 2	112.8	89.0%	371.3	100.0%	-69.6%
Female Board Representation (%)		20.4	88.0%	20.0	100.0%	1.6%

¹⁰ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2024. Benchmark: MSCI AC Asia ex Japan Total Return Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €1.2m as of 31 December 2024. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

¹¹ The figures shown demonstrate the difference in the performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

**What were the top investments of this financial product?**

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2024

Largest investments	Sector	% Assets	Country
TSMC	Information Technology	9.9	Taiwan
Reliance Industries	Energy	4.8	India
ICICI Bank	Financials	4.4	India
Phoenix Mills	Real Estate	4.4	India
MakeMyTrip	Consumer Discretionary	4.3	India
Ivanhoe Mines	Materials	3.8	Canada
Samsung Electronics	Information Technology	3.5	South Korea
eMemory Technology	Information Technology	3.5	Taiwan
MediaTek	Information Technology	3.5	Taiwan
IIFL Wealth Management	Financials	3.2	India
MercadoLibre	Consumer Discretionary	3.2	Uruguay
Chroma ATE	Information Technology	2.9	Taiwan
Aldar Properties PJSC	Real Estate	2.5	United Arab Emirates
Alinma Bank	Financials	2.4	Saudi Arabia
Globant SA	Information Technology	2.3	Argentina

**What was the proportion of sustainability-related investments?**

● **What was the asset allocation?**

100% of the companies the Fund invested in were assessed under the Investment Manager's EVA Framework, which is used to assess and deliver the environmental or social characteristics promoted by the Fund.

All investments, excluding cash, attained the characteristics of the Fund on an individual basis over the reference period.

During the reference period, the Fund invested 97.5% of its assets in equity and equity warrants. Therefore, on average 97.5%¹² of the investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund.

Asset allocation describes the share of investments in specific assets.

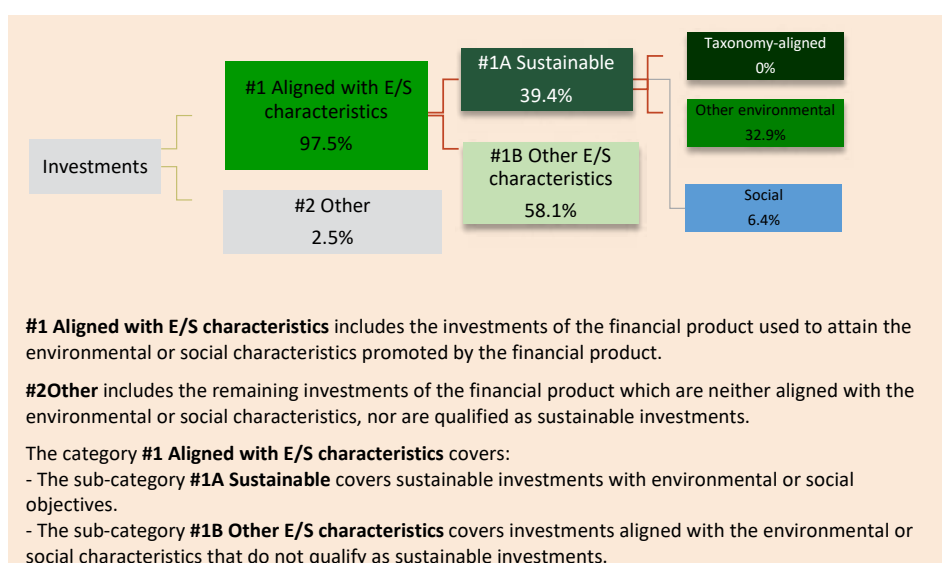

¹² This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, aligned with the Fund's characteristics. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end since launch (i.e. 30 June, 30 September and 31 December 2024).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market ex-China Stars Fund continued

While the Fund does not have sustainable investing as its objective, the Fund invested 39.4%¹³ of its assets in sustainable investments with an environmental or social objective.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’, ‘#1A sustainable’ etc.)

In which economic sectors were the investments made?

Economic Sectors	% Assets ¹⁴
Information Technology	37.1
Financials	19.8
Consumer Discretionary	12.0
Real Estate	8.8
Energy	6.0
Industrials	5.5
Materials	3.8
Consumer Staples	2.5
Communication Services	2.4
Cash and Cash equivalents	1.0

¹³ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as sustainable investments with an environmental or social objective over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹⁴ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

Reliance Industries

Reliance Industries is engaged in the activities of hydrocarbon exploration and production, petroleum refining and marketing, petrochemicals, advanced materials and composites, renewables (solar and hydrogen), retail and digital services. The Company's segments include Oil to Chemicals (O2C), Oil and Gas, Retail and Digital Services. In relation to fossil fuels, the O2C segment includes refining, petrochemicals, fuel retailing, aviation fuel and bulk wholesale marketing. It includes a portfolio spanning transportation fuels, polymers, polyesters and elastomers. The Oil and Gas segment is engaged in the exploration, development, and production of crude oil and natural gas.

Given the large, transformative transition this company is undertaking from a high emissions petrochemicals business to a leader in renewable energy such as solar, battery storage and hydrogen, the Investment Manager has undertaken additional engagement by means of a long-term collective investor engagement programme under Climate Action 100+ to ensure the company is held to account and there is continued oversight. The Investment Manager co-leads this engagement with other investors and spent significant time during 2024 visiting management at their operations in India.

Samsung E&A Co Ltd

Samsung E&A Co Ltd, formerly Samsung Engineering Co Ltd, is a Korea-based company primarily engaged in non-chemical engineering business. It does however have a Chemical segment which is engaged in the provision of oil refining, petrochemicals, and green solutions.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹⁵?

Yes:

In fossil gas

In nuclear energy

No

¹⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

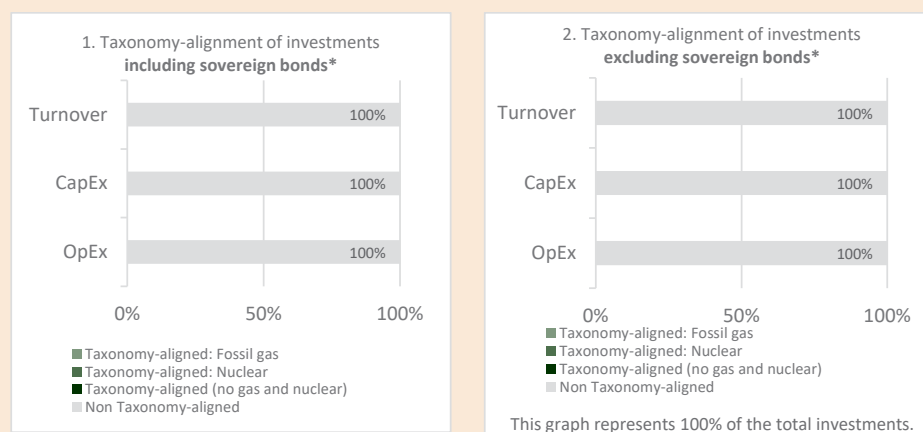

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market ex-China Stars Fund continued

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

The proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation is 0% of the Fund's net assets.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Over the reference period, the percentage of sustainable investments with an environmental objective not aligned with the EU taxonomy was 32.9%.¹⁶

In order to satisfy itself that an investment is environmentally sustainable pursuant to the Taxonomy Regulation, the Investment Manager must (a) determine whether or not the investments underlying the Fund are in environmentally sustainable activities (b) identify the extent to which the investments of the Fund are in economic activities that qualify as environmentally sustainable and are aligned with the Taxonomy Regulation; (c) identify the proportion, as a percentage of the Fund's portfolio, of investments in environmentally sustainable activities which are aligned with the Taxonomy Regulation; and (d) identify the proportion, as a percentage of the Fund's portfolio, of enabling and transitional activities (as described in the Taxonomy Regulation).

At the present time, the Investment Manager cannot satisfy itself that the Fund's investments meet the criteria outlined above. Accordingly, the proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

What was the share of socially sustainable investments?

During the reference period the percentage of sustainable investments with a social objective within the Fund was 6.4%.¹⁷

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 2.5% of the Fund's investments were identified as #2 Other in the above diagram and were held in cash for liquidity purposes in line with the Fund's Investment Policy. There are no minimum environmental or social safeguards applicable to these investments.¹⁸

¹⁶ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as sustainable investments with an environmental objective. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 30 June, 30 September and 31 December).

¹⁷ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as sustainable investments with a social objective. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end since launch (i.e. 30 June, 30 September and 31 December).

¹⁸ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, not aligned with the Fund's characteristics. The average is calculated as a simple average of the percentage of the Fund's assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 30 June, 30 September and 31 December.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market ex-China Stars Fund continued

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Using company specific knowledge and often engagement with company representatives, the Investment Manager assesses every prospective investee company, prior to purchase, using the Investment Manager's proprietary quantitative Economic Value Added (EVA) Wheel Model. The Investment Manager used the EVA Wheel to evaluate how investee companies contributed to future sustainable economic development (its Impact on Progress), how a company managed its key risks and opportunities from an ESG perspective (its Material ESG Issues) and how a company ensures it acted as a responsible corporate citizen (its Business Ethics). Each company was assigned a quantitative score based on these three areas. The Investment Manager carried out this evaluation using a variety of sources, including information and data published by the companies themselves, and third-party data and research providers. Every prospective investment was also assessed against the Fund's exclusion criteria.

The following are engagement examples carried out during the reference period:

Traxion

The Investment Manager engaged with Grupo Traxion to better understand the company's sustainability strategy, with a particular focus on its emission reduction plans. As Mexico's largest logistics company, the company by its very nature has a larger carbon footprint relative to companies from other sectors (it owns its own trucks/buses etc). However, the Investment Manager came away encouraged by the company's attitude towards sustainability and it certainly feels as if it is taking a proactive approach. For example, Traxion is one of the few listed Mexican corporates to have a separate sustainability team (with very high calibre hires) and to have actively thought about (and disclose detail on) how climate change will impact the business (and how climate change presents both risks and opportunities for the company in the long-term). It is also noteworthy that management's incentives are aligned with finding and implementing solutions to the company's carbon footprint, as sustainability KPIs are embedded in management compensation.

Traxion measures and discloses its scope 1, 2 and 3 emissions and is in the process of establishing credible science-based emission reduction targets, with a view to establishing a net zero commitment in the future. On the ground, it takes several practical steps to reduce its emissions via the optimised use of fuel; this is principally achieved by using AI and telematics to improve route optimisation (reducing the 'empty kilometres' their truck/bus fleet travel on their journey). Potentially even more significant to reducing its emissions longer-term, Traxion is one of the first companies in Mexico to use EV trucks/buses/vans; this is still a relatively small percentage of their total fleet, but it does appear to be doing the best that it can at this stage, given the limited EV charging infrastructure in Mexico. Management are optimistic this should improve under Claudia Sheinbaum as she has a PhD in renewable energy and has spoken at length about this being a particular focus of her administration. Traxion is also testing natural

gas/biomethane-powered trucks and buses as potential other solutions to reduce the carbon footprint of its fleet. Traxion has also installed solar panels on their warehouses.

Action Construction

Action Construction Equipment (ACE) is the market leader pick and carry cranes manufacturer in India with over 63% market share in mobile cranes and more than 60% market share in the tower cranes segment. The business is family run (the founding family owns 65% of the company) and in the Investment Manager's view is a well-run, capital-efficient business with strong growth prospects. As is typical in mid-sized, family-run businesses in India, ACE also has subpar sustainability disclosures. However, the Investment Manager sees this as an opportunity to engage with it and improve its rating in the proprietary EVA delta. Specifically, ACE has a Sustainability score of 6.1/10 which the Investment Manager thinks has room to move up over time.

The core area where the Investment Manager is engaging with ACE on is on the disclosure of GHG emissions. So far, the company does not report Scope 1,2 or 3 emissions. The Investment Manager engaged with the company to 1) report its GHG emissions and 2) subsequently, set targets and a plan of action to reduce the same. Given that the Investment Manager is one of its largest institutional shareholders, the founder did sound receptive to their feedback. However, the Investment Manager plans on waiting for tangible results before upgrading the company's score. To its credit, however, ACE's primary focus at this point is to prepare its equipment portfolio for the tighter emission and safety norms in India which will set in, in January 2025. From the Investment Manager's recent meeting, the company is confident in complying with the same and has also launched an electric construction vehicle.

Innovent Biologics

Innovent Biologics is an innovative Chinese biotech company with a strong pipeline of high potential molecules, especially in obesity and weight management with its newly approved GLP1. However, in October 2024, Innovent announced a related party transaction to spin off its international business with its senior management taking a direct 20% stake at a valuation that, in the Investment Manager's opinion, significantly undervalues its long-term potential.

While the Investment Manager appreciates management's effort to unlock and create value through its international growth strategy, which will create additional value for long-term shareholders, it took issue with the timing and valuation of the related party transaction. Even though the international business is a pre-revenue and loss-making business, the Investment Manager believes its strong pipeline of high potential molecules is worth significantly more than the valuation used for the transaction by benchmarking against similar transactions in the market.

The Investment Manager swiftly engaged with senior management teams and firmly voiced its frustration and objection to the transaction, and laid out a rationale for how

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market ex-China Stars Fund continued

this transaction would come at a high cost to shareholders and senior executives. In the meantime, the Investment Manager reached out and discussed its opinion with other shareholders too, garnering strong support from a wide range of other shareholders. With their active engagement and candid conversations with senior management during the week, the management team listened and cancelled this transaction.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How does the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the reference benchmark?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform compared with the broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Emerging Market Stars Fund

Sustainable

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Emerging Market Stars Fund (the “Fund”)

Legal entity identifier: 5493001FUNLE56KXSU19

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ **Yes**

☐ It made **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ ☒ **No**

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 35% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies primarily situated in emerging markets that have the ability to remain competitive and deliver attractive profitability over the long term due to robust fundamental characteristics, but only where these robust fundamental characteristics were combined with good or improving environmental, social and governance (“ESG”) profiles based on the Investment Manager’s proprietary analysis.

The Fund had a bias towards companies with improving sustainability profiles, based on the Investment Manager’s proprietary analysis.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

The Fund excluded companies that have an unacceptable or controversial ESG profile following the application of quantitative and qualitative analysis by the Investment Manager and through the use of the Fund's exclusions list.

The Investment Manager determined a security had met the characteristics of the Fund if it scored equal to or greater than 5 on its proprietary 'Sustainability Delta' scoring framework.

All investments attained the characteristics of the Fund on an individual basis over the review period.

● *How did the sustainability indicators perform?*

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Manager evaluated the Fund's performance on the characteristics through scores in five specific areas of sustainability including how a company contributed to future sustainable economic development (its 'Impact on Progress'), how a company managed its key risks and opportunities from an ESG perspective (its 'Material ESG Issues' – broken down into three separate areas: 'Environmental', 'Social' and 'Governance') and how a company ensured it acted as a responsible corporate citizen (its 'Business Ethics').

Each company was assigned two quantitative scores from 1-10 based on these five areas, one on a 'Current Level' basis and another on a 'Future Direction' basis.

The company's scores in these five areas are then taken together to provide the Investment Manager with a company's 'Sustainability Delta', which shows both its 'Current Level' and 'Future Direction' from a sustainability perspective.

There are two ways in which portfolio-level indicator scores change from period to period. These are via i) upgrades/downgrades to the Investment Manager's internal company scores on existing holdings, and ii) portfolio changes from buying lower scoring, selling higher scoring companies or vice versa.

In the case of i), company score upgrades are typically incremental, only apply to one element of the Investment Manager's complex scorecard for a company, do not carry a large weight, and will require many upgrades to have a large impact on the overall indicator score.

In the case of ii), as the Fund has relatively low turnover, and it is unlikely that the spread on all new companies invested in versus all companies sold during a given period will be very wide (in either direction), this driver too is moderate. Over this reporting period, the Fund invested in 22 new companies and exited 22 positions.

As in previous years, the Investment Manager expects to continue to see small changes in the sustainability indicators at the portfolio level, even whilst at the underlying company level there may be a number of investments which experience multi-point upgrades due to operational and strategic improvement. There has

been no significant change to the scoring process or other methodology changes over the reporting period that impact scores for this year.

The current breakdown of the Fund is shown in the table below¹:

	2024	
	Current Level	Future Direction
Impact on progress	7.59	7.93
Environmental	6.04	6.80
Social	6.69	6.88
Governance	7.36	7.48
Business ethics	6.97	7.21

Further information on the performance of the sustainability indicators compared to the previous period is provided below.

● ...and compared to previous periods?

A summary of the headline scores for comparison is shown below²:

	2021		2022		2023	
	Current Level	Future Direction	Current Level	Future Direction	Current Level	Future Direction
Impact on progress	7.42	7.80	7.58	7.93	7.74	8.09
Environmental	6.34	6.85	5.94	6.72	5.99	6.77
Social	6.73	7.15	6.61	6.97	6.53	6.84
Governance	7.08	7.40	7.16	7.26	7.24	7.35
Business ethics	6.68	6.98	6.78	7.03	6.79	7.10

¹ The table shows the average score of the Fund, excluding cash, across the five sustainability indicators of the Fund over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted scores as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

² Please note the figures shown for 2021 in this table differ slightly to those shown in Fund's SFDR Disclosure Annex of the Company's 2021 Annual Report. This difference is due to an update in the calculation methodology of the sustainability indicators. Sustainability indicator scores are now based on the portfolio weighted average of investee companies scores rather than a simple average. Please refer to page 408 of the 2021 Annual Report for full details of the portfolio scores against the five areas on a simple average basis.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

The tables below display a summary of all changes that have been made in the way described over the reporting period.³

Current Level:

	Current Level 2023	Score Changes	Portfolio Changes	Current Level 2024
Impact on progress	7.74	0.00	- 0.15	7.59
Environmental	5.99	- 0.01	0.06	6.04
Social	6.53	- 0.03	0.18	6.69
Governance	7.24	0.03	0.09	7.36
Business ethics	6.79	0.07	0.10	6.97

Future Direction:

	Future Direction 2023	Score Changes	Portfolio Changes	Future Direction 2024
Impact on progress	8.09	- 0.00	- 0.16	7.93
Environmental	6.77	- 0.00	0.04	6.80
Social	6.84	- 0.05	0.10	6.88
Governance	7.35	0.05	0.08	7.48
Business ethics	7.10	0.06	0.05	7.21

As is consistent with the Fund's process and the expectations of the Investment Manager, the sustainability indicator scores shown at a headline, aggregated level remain very stable from the previous period to the reference period. The key drivers of these constituent parts are analysed below.

Impact on Progress

The Fund's Impact on Progress score decreased the most of any factor over the reference period, down by 0.15 for Current Level and down 0.16 for Future Direction as compared with 2023, to 7.59 and 7.93 respectively, as shown in the summary table above.

In both cases, this decrease came almost exclusively from portfolio changes as upgrades within existing holdings had an almost zero effect within Current Level and Future Direction.

The major reason for the negative impact from portfolio changes was that the Investment Manager exited some names with very high impact on progress scores such as lithium names, Gangfeng and Allkem, as well as other names related to our theme resource management such as Sungrow (solar inverters) and Starpower (power semiconductors for solar, EV and wind power), and instead bought companies with a lower but still good impact to progress score such as MediaTek, Zomato, Trip.com and 360 ONE WAM.

³ Please note the figures presented may not sum precisely due to rounding.

Environmental

The Environmental score for the Fund improved marginally on both Current Level and Future Direction, registering a 0.06 upward move for the Current Level score and 0.03 for the Future Direction score.

In composition, this was driven in both cases by net positive portfolio changes made to the Fund, offsetting the effect from intra-fund upgrade/downgrades to existing holdings, which was a small negative.

MediaTek was a more material contributor to the small drag on the downgrades, particularly given the weight of the company within the Fund. The score moved from 9.0 to 8.67 for Current Level and Future Direction. The reason for this was that the Investment Manager adjusted the score for water management from 9 to 8 as the company's performance vs. peers deteriorated slightly.

The reason for the positive impact from portfolio changes is largely due to the Fund exiting some lower scoring holdings, particular mining names Gangfeng, Allkem and Merdeka copper, and buying very low environmental impacting tech, financial and consumer companies such as Alchip, Max Financial and Zomato.

Social

The Social indicator increased by 0.16 for the Current Level and 0.04 for the Future Direction and for both scores, portfolio changes were the major positive contributor to the changes in the Current Level, while score upgrades was a small detractor.

SK Hynix was a more material contributor to the small drag on the downgrades with the Current Level and Future Direction scores decreasing from 7.33 to 7.0 due to a slight deterioration in its performance on health and safety.

The reason for the positive impact from portfolio changes is largely due to the Investment Manager exiting some positions where, due to lack of disclosure from the companies, the Investment Manager had scored them deliberately very conservatively. Examples were Vinhomes, Vincom Retail and HPSP. The Investment Manager bought companies which perform well on the social factors relevant to them such as Zomato, Max Financial and 360 ONE WAM.

Governance

This indicator improved by 0.12 for Current Level and 0.13 for Future Direction again with portfolio changes being the major driver but also with a small positive contribution from score changes.

TSMC was a more material contributor to the positive contribution from score changes, particularly given the weight of the company within the Fund. The score moved from 7.67 to 9.0 for Current Level and Future Direction. The reason was introduction of ESG- related KPIs in management remuneration, the establishment of an independent nomination committee and the election of an additional female to the board of directors.

The reason for the positive impact from portfolio changes is largely due to the Investment Manager exiting some positions with lower quality governance such as Vinhomes and Vincom Retail, which, as part of the Vingroup, had some issues which meant that the

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

Investment Manager marked down their scores to reflect this, and bought better governed companies such as Zomato, Nubank and 360 ONE WAM.

Business Ethics

This indicator improved by 0.17 for Current Level and 0.11 for Future Direction, and for this factor, both portfolio changes as well as score upgrades were important contributors.

The biggest contributor to the score changes was Chroma where the score changed from 7.33 to 9.0 as the company established an anticompetitive practices policy and the company's tax gap improved.

The reason for the positive impact from portfolio changes is due to the Investment Manager exiting some positions with lower scores such as HPSP, Ray Co and Andes Technology and buying some higher scoring companies such as Alchip, Mobile World and Action Construction Equipment.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Investment Manager used an 'Impact on Progress' assessment within the Fund's proprietary Economic Value Added (EVA) Framework to identify and assess investment opportunities that, in the Investment Manager's view, contribute to sustainable environmental and social objectives.

The 'Impact on Progress' assessment is centred around three key pillars (Resource Management, Social Development and Economic Progress) informed by the United Nations Sustainable Development Goals ("UN SDGs"). Each pillar links to corresponding sustainable investment objectives. Companies were eligible to be considered as a sustainable investment if the company's products or services were deemed to contribute to one or more of the sustainable investment objectives. For the reference period, the sustainable investment objectives that the Fund contributed towards are highlighted in the table below.

Sustainable Investment Objective	% of Sustainable Investments in the Fund, categorised by Sustainable Investment Objective ⁴
Circular Economy	0.0%
Climate Change	30.6%
Health & Wellbeing	2.4%
Financial Inclusion	1.5%
Sustainable Future Food	0.4%
Total Sustainable Investments	34.9%

⁴ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments with an environmental or social objective over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

The following are examples of sustainable investments and how they are contributing to the sustainable investment objective:

Daejoo Electronic Materials

Daejoo Electronics Materials contributes to the sustainable investment objective 'Climate Change' by developing and commercialising, as one of the first in the world, silicon anodes for electric vehicle batteries. Silicon anodes will increase driving range and reduce charging time, helping to drive up electric vehicle penetration.

Transportation is responsible for around 30% of global final energy demand⁵, and the Investment Manager views the adoption of electric vehicles as a significant contributor to increasing energy efficiency in the sector.

A recent study from YALE Climate Connection under Yale School of the Environment, Yale University shows that around 80% of the energy in gasoline powered vehicles is lost to various inefficiencies and the number is only 11% for electric vehicles⁶. Roughly speaking an electric vehicle is therefore 4.5x as energy efficient as an ICE powered vehicle.

Alinma Bank

In 2017, the percentage of total adults with a bank account in Saudi Arabia was 72%, far below the developed market average of >90%⁷. Financial inclusion for adult women in the Kingdom is far lower at 60%⁸. Financial literacy in Saudi Arabia is astonishingly low at 31%⁹, and below even many lower income emerging market peers. In 2022, an IMF consultation paper on Saudi Arabia called for improvement to financial inclusion – particularly for SMEs and women, and an earlier 2020 project by the G20 Partnership for Financial Inclusion (GPFI) identified the digital financial inclusion of women, youths and SMEs as the key priorities.

Alinma Bank's retail strategy very explicitly targets exactly these areas, prioritising growth in serving the under-banked digital youth and women's segments.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm ("DNSH"), assessed each company primarily using third party data, to assess whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as sustainable investments by the Investment Manager.

The Investment Manager used the research of third party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over the assessment of third-party conclusions on a case-by-case basis.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of the Annex 1 Level 2 Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable, Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing the alignment of investee companies with these global norms, and where necessary, conducting further due diligence to determine compliance with these norms.

To ensure that Sustainable Investments were aligned with the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, the Fund excluded companies deemed to have severe violations of the UNGC principles and OECD Guidelines using third-party controversy research related to these global norms.

As a result of these assessments, the Investment Manager was comfortable that the Sustainable Investments within the portfolio appeared to not violate the above guidelines and principles.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity, energy consumption and carbon reduction initiatives. Furthermore, revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. Where material revenues were flagged, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero.

Similarly, where water usage was deemed material to an investee company by the Investment Manager, the Investment Manager sought to encourage the adoption of appropriate water management and water reduction policies.

The Investment Manager considered the board gender diversity of investee companies, and, where it deemed appropriate, used its tools of active ownership to encourage better diversity practices.

The Investment Manager considered the standards of the United Nations Global Compact, the Organisation for Economic Co-Operation and Development’s Guidelines for Multinational Enterprises, whistleblower protection, and anti-corruption and anti-bribery policies. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

¹⁰ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2024. Benchmark: MSCI Emerging Market Net Total Return Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €2,891m as of 31 December 2024. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability. Figures may differ due to rounding and currency conversion effects.

¹¹ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What was the proportion of sustainability-related investments?

Asset allocation
describes the
share of
investments in
specific assets.

● What was the asset allocation?

100% of the companies the Fund invested in were assessed under the Investment Manager's EVA Framework, which is used to assess and deliver the environmental or social characteristics promoted by the Fund.

All investments, excluding cash, attained the characteristics of the Fund on an individual basis over the reference period.

During the reference period, the Fund averaged 98.2% investment in equity and equity warrants. Therefore, on average 98.2%¹² of the investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund.

While the Fund does not have sustainable investing as its objective, the Fund invested 34.9%¹³ of its investments in sustainable investments with an environmental or social objective.

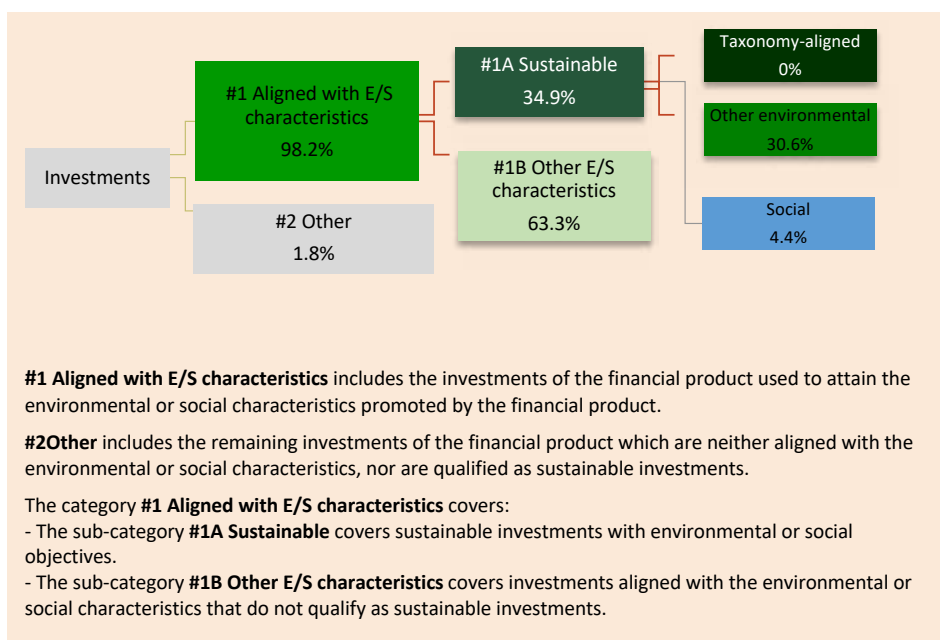

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. '#1 Aligned with E/S characteristics', '#1A sustainable' etc.)

¹² This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, aligned with the Fund's characteristics over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹³ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments with an environmental or social objective over the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

● In which economic sectors were the investments made?

Economic Sectors	% Assets ¹⁴
Information Technology	31.8
Financials	18.0
Consumer Discretionary	17.4
Communication Services	9.3
Real Estate	7.1
Energy	4.6
Materials	4.2
Industrials	3.3
Health Care	2.0
Consumer Staples	1.5
Cash and Cash equivalents	0.9

During the reference period the only material exposure to fossil fuels within the Fund was via Reliance Industries and Samsung E&A Co. (formerly Samsung Engineering Co).

Reliance Industries

Reliance Industries is engaged in the activities of hydrocarbon exploration and production, petroleum refining and marketing, petrochemicals, advanced materials and composites, renewables (solar and hydrogen), retail and digital services. The

¹⁴ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

Company's segments include Oil to Chemicals (O2C), Oil and Gas, Retail and Digital Services. In relation to fossil fuels, the O2C segment includes refining, petrochemicals, fuel retailing, aviation fuel and bulk wholesale marketing. It includes a portfolio spanning transportation fuels, polymers, polyesters and elastomers. The Oil and Gas segment is engaged in the exploration, development, production of crude oil and natural gas.

Given the large, transformative transition this company is undertaking from a high emissions petrochemicals business to a leader in renewable energy such as solar, battery storage and hydrogen, the Investment Manager has undertaken additional engagement by means of a long-term collective investor engagement programme under Climate Action 100+ to ensure the company is held to account and there is continued oversight. The Investment Manager co-leads this engagement with other investors and spent significant time during 2024 visiting management at their operations in India.

Samsung E&A Co Ltd

Samsung E&A Co Ltd, formerly Samsung Engineering Co Ltd, is a Korea-based company primarily engaged in non-chemical engineering business. It does however have a Chemical segment which is engaged in the provision of oil refining, petrochemicals, and green solutions. The Fund sold out of the position during the reference period.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹⁵?

Yes:

In fossil gas

In nuclear energy

No

¹⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

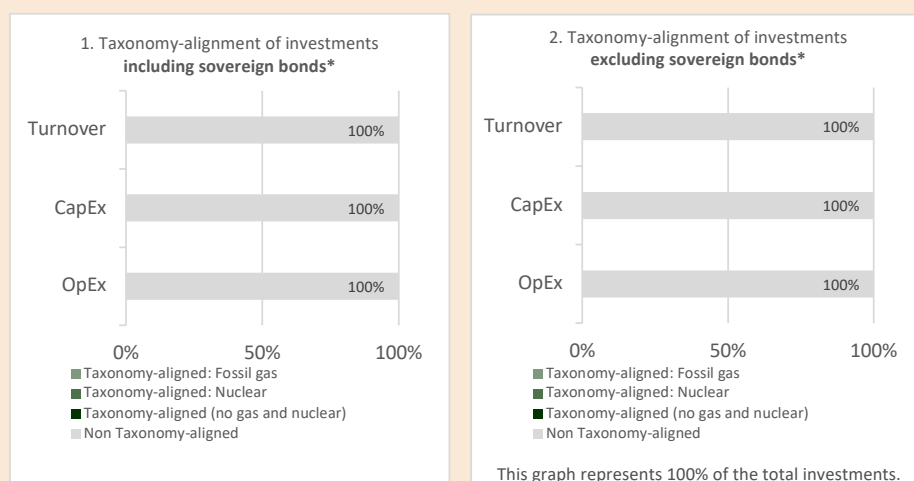

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

The proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund’s net assets.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund’s net assets.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Over the reference period, the percentage of Sustainable Investments with an environmental objective not aligned with the EU Taxonomy was 30.6%.¹⁶

In order to satisfy itself that an investment is environmentally sustainable pursuant to the Taxonomy Regulation, the Investment Manager must (a) be satisfied that the investments underlying the Fund are in environmentally sustainable activities (b) identify the extent to which the investments of the Fund are in economic activities that qualify as environmentally sustainable and are aligned with the Taxonomy Regulation; (c) identify the proportion, as a percentage of the Fund's portfolio, of investments in environmentally sustainable activities which are aligned with the Taxonomy Regulation; and (d) identify the proportion, as a percentage of the Fund's portfolio, of enabling and transitional activities (as described in the Taxonomy Regulation).

At the present time, the Investment Manager cannot satisfy itself that the Fund's investments meet the criteria outlined above. Accordingly, the proportion of investments of the Fund invested in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, is 0% of the Fund's net assets.

What was the share of socially sustainable investments?

During the reference period the percentage of Sustainable Investments with a social objective within the Fund was 4.4%.¹⁷

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 1.8% of the Fund's investments were identified as #2 Other in the above diagram and were held in cash for liquidity purposes

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

¹⁶ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments with an environmental objective. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹⁷ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are classified as Sustainable Investments with a social objective. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

in line with the Fund's Investment Policy. There are no minimum environmental or social safeguards applicable to these investments.¹⁸

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Using company specific knowledge and often engagement with company representatives, the Investment Manager assessed every prospective investee company, prior to purchase, using the Investment Manager's Proprietary Quantitative Economic Value Added (EVA) Wheel Model. The Investment Manager used the EVA Wheel to evaluate how investee companies contributed to future sustainable economic development (its Impact on Progress), how a company managed its key risks and opportunities from an ESG perspective (its Material ESG Issues) and how a company ensures it acted as a responsible corporate citizen (its Business Ethics).

Each company was assigned a quantitative score based on these three areas. The Investment Manager carried out this evaluation using a variety of sources, including information and data published by the companies themselves, and third-party data and research providers. Every prospective investment was also assessed against the Fund's exclusion criteria.

The following are engagement examples carried out during the reference period:

Traxion

The Investment Manager engaged with Grupo Traxion to better understand the company's sustainability strategy, with a particular focus on its emission reduction plans. As Mexico's largest logistics company, the company by its very nature has a larger carbon footprint relative to companies from other sectors (it owns its own trucks/buses etc). However, the Investment Manager came away encouraged by the company's attitude towards sustainability and it certainly feels as if it is taking a proactive approach. For example, Traxion is one of the few listed Mexican corporates to have a separate sustainability team (with very high calibre hires) and to have actively thought about (and disclose detail on) how climate change will impact the business (and how climate change presents both risks and opportunities for the company in the long-term). It is also noteworthy that management's incentives are aligned with finding and implementing solutions to the company's carbon footprint, as sustainability KPIs are embedded in management compensation.

Traxion measures and discloses its scope 1, 2 and 3 emissions and is in the process of establishing credible science-based emission reduction targets, with a view to establishing a net zero commitment in the future. On the ground, it takes several practical steps to reduce its emissions via the optimised use of fuel; this is principally achieved by using AI and telematics to improve route optimisation (reducing the 'empty kilometres' their truck/bus fleet travel on their journey). Potentially even more significant to reducing its

¹⁸ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, not aligned with the Fund's characteristics. The average is calculated as a simple average of the percentage of the Fund's assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December 2024.

emissions longer-term, Traxion is one of the first companies in Mexico to use EV trucks/buses/vans; this is still a relatively small percentage of their total fleet, but it does appear to be doing the best that it can at this stage, given the limited EV charging infrastructure in Mexico. Management are optimistic this should improve under Claudia Sheinbaum as she has a PhD in renewable energy and has spoken at length about this being a particular focus of her administration. Traxion is also testing natural gas/biomethane-powered trucks and buses as potential other solutions to reduce the carbon footprint of its fleet. Traxion has also installed solar panels on their warehouses.

Action Construction

Action Construction Equipment (ACE) is the market leader pick and carry cranes manufacturer in India with over 63% market share in mobile cranes and more than 60% market share in the tower cranes segment. The business is family run (the founding family owns 65% of the company) and in the Investment Manager's view is a well-run, capital-efficient business with strong growth prospects. As is typical in mid-sized, family-run businesses in India, ACE also has subpar sustainability disclosures. However, the Investment Manager sees this as an opportunity to engage with it and improve its rating in the proprietary EVA delta. Specifically, ACE has a Sustainability score of 6.1/10 which the Investment Manager thinks has room to move up over time.

The core area where the Investment Manager is engaging with ACE on is on the disclosure of GHG emissions. So far, the company does not report Scope 1,2 or 3 emissions. The Investment Manager engaged with the company to 1) report its GHG emissions and 2) subsequently, set targets and a plan of action to reduce the same. Given that the Investment Manager is one of its largest institutional shareholders, the founder did sound receptive to their feedback. However, the Investment Manager plans on waiting for tangible results before upgrading the company's score. To its credit, however, ACE's primary focus at this point is to prepare its equipment portfolio for the tighter emission and safety norms in India which will set in, in January 2025. From the Investment Manager's recent meeting, the company is confident in complying with the same and has also launched an electric construction vehicle.

Innovent Biologics

Innovent Biologics is an innovative Chinese biotech company with a strong pipeline of high potential molecules, especially in obesity and weight management with its newly approved GLP1. However, in October 2024, Innovent announced a related party transaction to spin off its international business with its senior management taking a direct 20% stake at a valuation that, in the Investment Manager's opinion, significantly undervalues its long-term potential.

While the Investment Manager appreciates management's effort to unlock and create value through its international growth strategy, which will create additional value for long-

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Emerging Market Stars Fund continued

term shareholders, it took issue with the timing and valuation of the related party transaction. Even though the international business is a pre-revenue and loss-making business, the Investment Manager believes its strong pipeline of high potential molecules is worth significantly more than the valuation used for the transaction by benchmarking against similar transactions in the market.

The Investment Manager swiftly engaged with senior management teams and firmly voiced their frustration and objection to the transaction, and laid out a rationale for how this transaction would come at a high cost to shareholders and senior executives. In the meantime, the Investment Manager reached out and discussed its opinion with other shareholders too, garnering strong support from a wide range of other shareholders. With their active engagement and candid conversations with senior management during the week, the management team listened and cancelled this transaction.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

European ex UK Income Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Polar Capital Funds plc – European ex UK Income Fund (the “Fund”)

Legal entity identifier: 549300Q96O5P02TCDU17

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ **Yes**

☐ It made **sustainable investments with an environmental objective**: ____%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ ☒ **No**

☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy. Using the Investment Manager’s proprietary ESG analysis tool (the “European ex UK Income Fund framework”), the Fund took positions in companies with positive aggregate scores against four categories:

- i. **Governance and Culture** - This category concerns a company’s policies relating to its corporate culture and behaviour, including policies in relation to employee welfare.
- ii. **ESG Strategy and Technology** - This category concerns the positive environmental and social impacts of a company’s products and services.
- iii. **Stakeholder Due Diligence** - This category concerns a company’s practices and policies in relation to all its stakeholders.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

European ex UK Income Fund continued

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- iv. **Environmental Risk Analysis** - This category concerns a company's interaction with, and material impacts on, the environment.

● *How did the sustainability indicators perform?*

Over the reference period, 0% of the Fund's investments failed the Fund's exclusion criteria.

The Fund used the European ex UK Income Fund Framework and compliance with the Fund's exclusion criteria to measure the attainment of the Fund's ESG characteristics against the four categories described above.

The European ex UK Income Fund Framework consists of a sustainability score measured across three categories: Governance and Culture, Strategy & Technology and Stakeholder Due Diligence (which are scored on a combined basis), and Environmental Risk Management.

Each of these three categories is scored out of 5, resulting in an aggregate score out of 15. In 2024, 100% of the investee companies in the Fund remained aligned with the promoted characteristics, each passing the exclusion criteria and meeting the minimum combined score of 5 out of 15. At year end, in December, across all investee companies, the lowest score was 11 out of 15¹.

The table below shows the Fund's performance against the sustainability indicators for the reference period².

	31-Mar-24	30-Jun-24	30-Sep-24	31-Dec-24	2024 Average
Pillar 1 Score Governance and Culture	4.6	4.6	4.6	4.5	4.6
Pillar 2 Score Strategy & Technology and Stakeholder Due Diligence	4.4	4.4	4.5	4.5	4.4
Pillar 3 Score Environmental Risk Management	4.7	4.7	4.6	4.5	4.6
Overall Score	13.7	13.7	13.7	13.5	13.6

During the reference period, no investee companies' scores increased or decreased. The fluctuation in average scores across the reference period is because certain positions were rotated out of, and new positions entered in to, which impacted the Fund's overall score.

¹ The portfolio alignment is calculated through investee companies' alignment with the Fund's exclusion criteria and the percentage of companies that have positive or credible improving scores against the European ex UK Income Fund Framework during the period for which the Fund was classified as an Article 8 Fund under the SFDR.

² This shows the equal weighted average score of the Fund, excluding cash, across each of the three categories of the European ex UK Income Fund Framework at the end of each quarter. The Overall Score is calculated as a sum of the Fund's score against each category of the European ex UK Income Fund Framework.

● **...and compared to previous periods?**

Relative to previous periods, in which the scores were appropriately high, scores during the reference period remained stable. Changes in average scores were reflective not in changes of the scores of the underlying companies, but were a result of changed holdings in the portfolio.

	2022 Average ³	2023 Average
Pillar 1 Score Governance and Culture	4.6	4.5
Pillar 2 Score Strategy & Technology and Stakeholder Due Diligence	4.5	4.5
Pillar 3 Score Environmental Risk Management	4.6	4.7
Overall Score	13.7	13.6

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

³The Fund's average exposure to each of the characteristics promoted by the Fund is calculated by taking a simple average of the quarterly exposures.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

European ex UK Income Fund continued

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager integrated the principal adverse impact indicators (PAIs) set out in Annex I, Table 1 of the SFDR into its European ex UK Income Fund framework for the Fund as a component of its sustainability score (which is out of 15).

As outlined above, the sustainability score is comprised of three sections which are each scored out of 5: Governance and Culture (scored out of 5), Strategy & Technology and Stakeholder Due Diligence (scored out of 5) and Environmental Risk Management (scored out of 5).

The chosen PAI indicators are mapped onto these sections in the following manner. The percentage of female directors and a company's gender pay gap are used to assess the Governance and Culture of a company. To assess a company's Strategy & Technology, the Investment Manager looks at factors such as supply chain management, and the design, quality and safety of products. UNGC violations and the confirmation that a company is a UNGC signatory are factors considered under Stakeholder Due Diligence.

In regard to Environmental Risk Management, the Investment Manager incorporates assessment of the following principal adverse impacts: the company's greenhouse gas (“GHG”) emissions, the company's carbon footprint and greenhouse gas intensity, the company's fossil fuel exposure, the company's production and consumption of non-renewable energy, the company's energy consumption intensity, the company's level of emissions to water, the company's hazardous waste ratio and the company's impact on biodiversity.

Having measured all available data for investee companies, the Investment Manager first engages to encourage investee companies to consider and disclose all 14 of the principal adverse impact indicators.

The Investment Manager has therefore engaged with all the holdings in its portfolio across the reference period, including the likes of Siemens, Orange and Inwit (amongst other companies) to ensure that all information necessary to measure the PAIs is provided (as currently complete coverage, whilst improved from prior years, is still lacking).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ⁴		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁵
GHG Emissions (TCO2e)	Scope 1	5,454.4	100.0%	10,976.3	99.0%	-50.3%
	Scope 2	1,964.4	100.0%	2,288.0	99.0%	-14.1%
	Scope 1 & 2	7,418.8	100.0%	13,264.3	99.0%	-44.1%
Carbon Footprint (TCO2e/ €m Invested)	Scope 1 & 2	28.7	100.0%	51.0	99.0%	-43.8%
GHG Intensity (TCO2e / €m Revenue)	Scope 1 & 2	43.5	100.0%	123.1	99.0%	-64.7%
Weighted Average Carbon Intensity (TCO2e / €m Revenue)	Scope 1 & 2	50.7	100.0%	80.7	99.0%	-37.2%
Female Board Representation (%)		41.6	100.0%	41.1	100.0%	1.3%

⁴ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2024. Benchmark: MSCI Daily Net Total Return Europe ex UK Index. The allocated emissions of investee companies is calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €260.0 m as of 31 December 2024. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁵ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

European ex UK Income Fund continued

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2024

Largest investments	Sector	% Assets	Country
TotalEnergies SE	Energy	4.7	France
Siemens AG	Industrials	4.1	Germany
Iberdrola SA	Utilities	3.6	Spain
Swiss Re AG	Financials	3.6	Switzerland
Sanofi	Health Care	3.5	France
DHL Group	Industrials	3.4	Germany
E.ON SE	Utilities	3.3	Germany
Vinci	Industrials	3.2	France
Orange SA	Communication Services	3.2	France
UPM-Kymmene OYJ	Materials	3.2	Finland
Edenred	Financials	3.1	France
Getlink SE	Industrials	3.1	France
Sampo	Financials	3.1	Finland
L'Oreal SA	Consumer Staples	3.1	France
Pernod Ricard SA	Consumer Staples	3.1	France

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

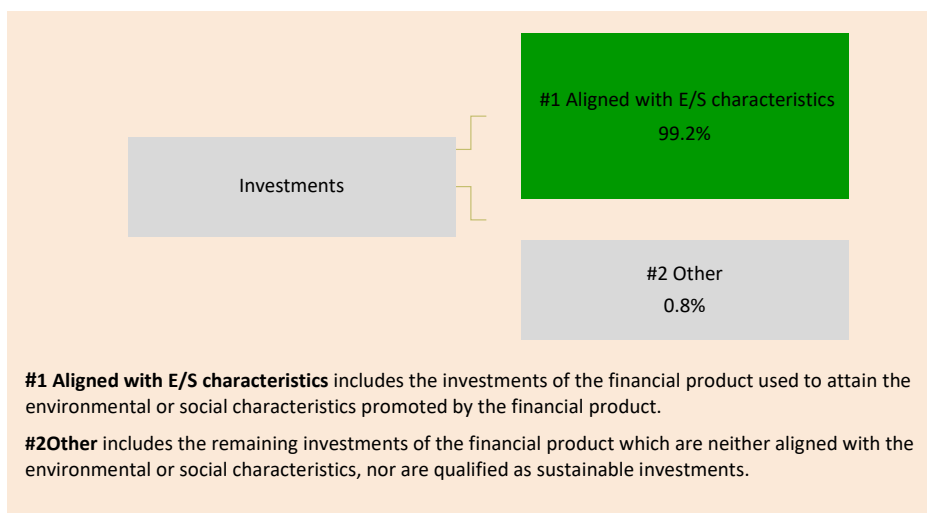

The Fund invested primarily in securities of issuers that are incorporated, have their headquarters, or exercise a significant part (greater than 20%) of their economic activities in European markets/ countries (excluding the United Kingdom).

The Investment Manager used the European ex UK Income Fund Framework to assess the environmental and social characteristics ("E/S") of each investee company. 100% of the companies the Fund invests in were assessed under the European ex UK Income Fund Framework.

During the reference period, an average of 99.2⁶ of the investments of the Fund were used to meet the environmental and social characteristics promoted by the Fund by passing the exclusion criteria and meeting the minimum company score of 5 out of 15.

⁶ This shows the portfolio weighted average of the assets of the Fund, including cash, which were aligned with the characteristics during the reference period. The average alignment is calculated as a simple average of the portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)

● In which economic sectors were the investments made?

Economic Sectors	% Assets ⁷
Industrials	29.3
Financials	21.1
Communication Services	14.7
Consumer Staples	13.3
Utilities	6.9
Materials	6.1
Energy	4.7
Health Care	3.5
Cash and Cash equivalents	0.4

The Fund has held four companies with exposure to fossil fuels during the reference period.

TotalEnergies SE (Total)

The Investment Manager continues to hold TotalEnergies in the portfolio. TotalEnergies is a French multinational energy company, providing fuels, natural gas and electricity and operating across four segments: Exploration and Production, Gas, Renewables & Power, Upstream Oil and Gas Activities, Refining & Chemicals and Marketing & Services. The Investment Manager is of the opinion this company is instrumental in leading the energy transition.

⁷ This figure shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

European ex UK Income Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

TotalEnergies is committed to achieving net zero by 2050 and was one of the founding companies of the Oil and Gas Climate Initiative. By 2050, TotalEnergies has clearly outlined that 50% of its energy would be generated by low-carbon electricity, whilst another 25% of energy generated would emerge from decarbonised fuels such as biogas, hydrogen or synthetic liquid fuels.

To achieve net zero therefore, the company has been investing in carbon storage and sequestration projects to mitigate any residual emissions. Moreover, TotalEnergies has been integrating carbon pricing, and charges an internal carbon price to its operations to manage energy and allocate capital more effectively. In 2023, 35% of TotalEnergies' investment was directed towards low-carbon energy. This will help TotalEnergies to achieve a sales mix that is 20% electricity by 2030.

UPM-Kymmene Corporation (UPM)

The Investment Manager continues to hold UPM in the portfolio. UPM is a global forest company. UPM's business segments include UPM Biorefining, UPM Energy, UPM Raflatac, UPM Specialty Papers, UPM Communication Papers and UPM Plywood and Other operations. UPM is focussed on providing customers with responsibly sourced products and mitigating its environmental impact.

Significantly, the UPM Energy business segment is an electricity producer and is the second largest provider of electricity in Finland. It generates zero-carbon electricity in both independently owned and co-owned power plants through hydropower, nuclear and thermal power. Currently, 95% of electricity production is emission-free. UPM has been investing in biofuels since 2015, providing customers (such as oil refiners, distributors and retailers) with a low emissions alternative to traditional fossil fuels. UPM's BioVerno fuel, which is made from crude tall oil (a by-product of wood pulp manufacture), produces 80% less greenhouse gas emissions than fossil diesel.

UPM has carbon reduction targets that are aligned with the Paris Agreement, and are validated by the Science Based Targets initiative. The company aims to eliminate coal and peat usage in on-site energy generation, and reduce its carbon dioxide emissions from on-site combustion by 65% in 2030.

E.ON SE

The Investment Manager holds E.ON in the portfolio. E.ON is an international energy company, operating in energy sales, energy infrastructure solutions and energy distribution grids. By providing customers with access to renewables, through distribution across its grids, and by providing digital solutions such as smart meters, E.ON plays a key role in the energy ecosystem and the energy transition in Europe.

E.ON has clearly outlined that fossil-fuelled power generation is no longer a core E.ON business, with fossil-based emissions emerging primarily from E.ON's small-scale gas-fired combined-heat-and-power plants and district heat networks. E.ON also procures power from wholesale markets, where the source is largely untraceable. E.ON's climate strategy incorporates clear emission-reduction targets for 2030, 2040 and 2050, furthermore the company aims to be climate-neutral by

2040 (across Scopes 1 and 2). For example, E.ON is aiming to reduce its scope 3 emissions by 50% by 2030, and its scope 1 and 2 emissions by 50-75%.

As earlier outlined, E.ON plays a critical role in decarbonisation. 15% of all of Europe's renewable assets are connected to E.ON's grids. Additionally, in 2023, 98% of E.ON's total capital expenditure was aligned with the EU taxonomy.

Iberdrola

The Investment Manager holds Iberdrola in the portfolio. As a multinational Spanish energy company, Iberdrola plays a key role in facilitating the global energy transition. Across its deregulated business Iberdrola provides gas trading facilities, as well as electricity generation and sales, offering customers power and natural gas across both wholesale and retail markets.

More significantly, however, Iberdrola's business model is focused on scaling its smart grids, large-scale energy storage facilities, and its renewable energy provision. Management is aiming to promote green energy, drive technological innovation and continue to electrify the global economy. Furthermore, Iberdrola has been investing in renewable energy for over 20 years and is the leading wind-power producer globally. By 2026, management has clearly outlined it will invest €41 billion to drive the energy transition, allocating investment to building out networks, and scaling its renewable energy capacity.

Iberdrola is aiming to achieve carbon neutrality across Scopes 1 and 2 by 2030, ten years earlier than the emissions reduction required of the electricity sector. Additionally, Iberdrola is committed to achieving Net Zero emissions by 2040, across all scopes (including scope 3) from a 2020 base year. The company's net zero commitment has been validated by the Science- Based Targets initiative.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy⁸?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

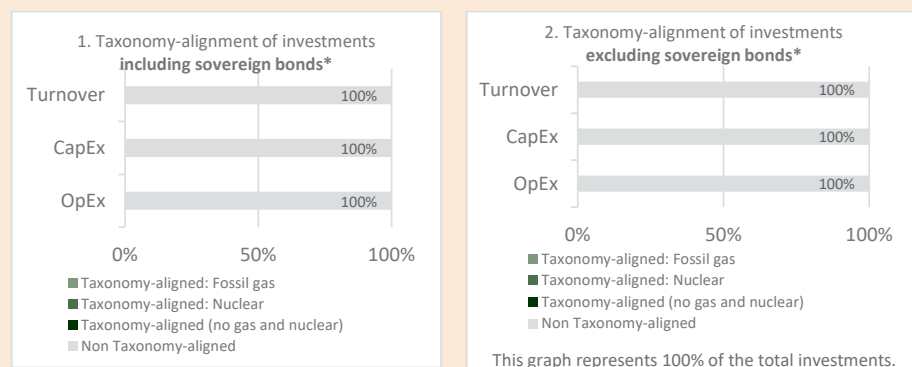

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

European ex UK Income Fund continued

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 0.8% of the Fund's investments were identified as #2 Other in the above diagram and were held in cash in line with the Fund's

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Investment Policy. There are no minimum environmental or social safeguards applicable to these investments.⁹

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Using company specific knowledge, and often engagement with company representatives, the Investment Manager assessed every prospective investee company, prior to purchase, using the European ex UK Income Fund Framework.

The Investment Manager used the European ex UK Income Fund Framework to evaluate the ESG performance of companies against the three categories highlighted above and carried out this evaluation using a variety of sources, including information and data published by the companies themselves and third party data and research providers. Every prospective investment is also assessed against the Fund's exclusion criteria.

The Investment Manager had interactions with investee companies across its entire portfolio to ensure that the promoted characteristics of the Fund are met. In particular, the Investment Manager has focused on improving disclosure of the PAI metrics considered by the Fund across all of the investee companies. Although there was year-on-year improvement in disclosure, full disclosure of PAIs across all holdings was not in place. This disclosure enables the Investment Manager to assess companies regardless of their sector, and therefore provides a basis for engagement. The Investment Manager does, in addition, engage with investee companies on any issues that the Investment Manager feels may pose a future material risk to the investment thesis.

As outlined earlier, none of our holdings' underlying scores changed during the reference period. In the first quarter of the year, reinsurance holdings, such as Munich Re and Swiss Re, were engaged with to ascertain the impact and consideration amongst these companies for PFAS (perfluoroalkyl and polyfluoroalkyl substances), known as "forever chemicals" due to their persistence in the environment and potential health concerns. Whilst various regions, such as the US or the EU, are undertaking regulatory activities regarding these 'forever chemicals', we were reassured by our companies' actions. Both Munich Re and Swiss Re did not view their business operations as very disrupted by potential litigation concerns, and both companies were closely monitoring regulatory movements regarding PFAS globally.

Across the year, the Investment Manager engaged with certain holdings to further understand their net zero strategies, and to evaluate the shortcomings in these strategies. During the reference period, BIC was engaged with. Although BIC was divested of, due to valuation reasons, with a new head of ESG, the company was still not undertaking SBTi validation for its emission reduction targets, which remained a point of contention between the investee company and the Investment Manager. Aena's sustainability team clarified the progression and achievement of scope 3 targets, after the company was engaged with. Furthermore, in the last quarter of the year, the Investment Manager

⁹ This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, not aligned with the Fund's characteristics. The average is calculated as a simple average of the percentage of the Fund's assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

Financial Credit Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Financial Credit Fund (the “Fund”)

Legal entity identifier: 549300YP7PDRHQ4IAT53

Sustainable

investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <ul style="list-style-type: none"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy<input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy. Using the Investment Manager’s proprietary ESG analysis tool ‘Financials Team ESG Framework’, the Fund excluded companies which were deemed to demonstrate poor environmental or social characteristics as assessed through the Financials Team ESG Framework and its exclusion policy¹.

¹ The Fund’s investment focus changed in December 2023, so some change in scoring profile is expected.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Financial Credit Fund continued

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

The Investment Manager used the Financials Team ESG Framework to measure the attainment of the Fund's ESG characteristics. The Investment Manager also used adherence to the Fund's exclusion policy as an indicator to measure attainment of the Fund's environmental and social characteristics.

All companies in the Fund were assessed under the Financials Team ESG Framework. Further to this, all companies rated 'CCC' in accordance with the overall framework and all companies rated 'CCC' for governance under the Financial Team ESG framework were excluded from the Fund.

As a result, over the reference period, on average 90.8% of the investments of the Fund, on a portfolio weighted basis as a percentage of total assets including cash, were used to meet the environmental or social characteristics promoted by the Fund². Also, at the time of the Fund's investment, 0% of investee companies failed the exclusion criteria.

During the reference period, the Fund opened 39 and closed 42 long positions. This resulted in a marginal change in the internal ESG rating distribution of the Fund, with the % of 'A' rated companies increasing by 8% to 50%.³

Rating ⁴	Mar-24	Jun-24	Sep-24	Dec-24	Average

⁵ This table shows the simple average of the Financials Team ESG Framework ratings distribution of the Fund's assets, excluding cash, at the end of each quarter.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Financial Credit Fund continued

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives.

Revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. Where material revenues were flagged, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero.

The Investment Manager considered the board gender diversity of investee companies, and, where it deemed appropriate, used its tools of active ownership to encourage better diversity practices.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

The Investment Manager also took into account as part of its process the standards of the United Nations Global Compact, and the Organisation for Economic Co-Operation and Development’s Guidelines for Multinational Enterprises. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident to decide the appropriate action to take: whether to monitor, enter enhanced engagement, or divest from the company. No companies were involved in severe norms violations over the reference period, so no action was taken.

The Investment Manager is aware that one of its holdings, a position in National Australia Bank, has been flagged by a third party ESG data provider for Norms Based Standards in relation to labour and human relations management, specifically related to alleged underpayment of employees. As outlined last year, this position was opened prior to the

Fund's designation as an Article 8 Fund, and upon hearing of the action, the Investment Manager engaged with the company's management to determine the veracity and severity of these allegations. This engagement indicated that issues related to historic behaviour (dating back to 2012), and as noted previously, the Investment Manager remains comfortable that remediation actions have been completed.

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

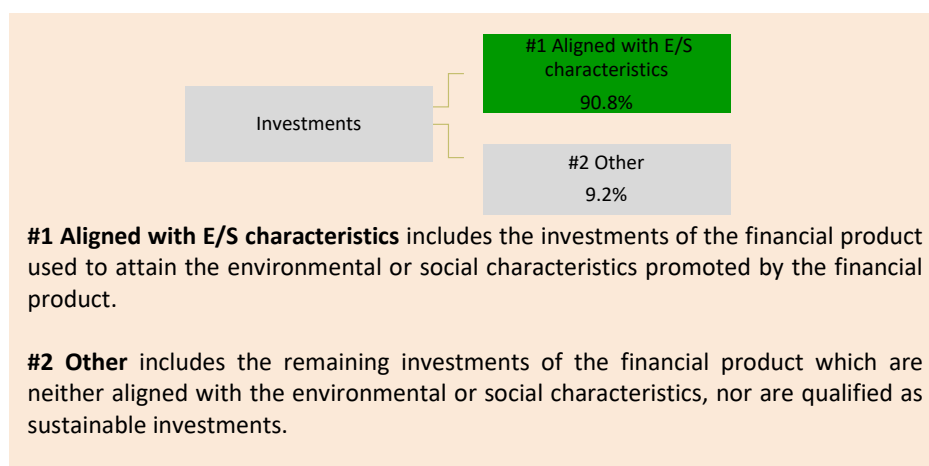

Prior to the change in the Fund's investment focus in December 2023, the Fund invested primarily in the equity, debt and other securities of financial companies worldwide. The Investment Manager used the Financials Team ESG Framework to assess the environmental and/or social characteristics ("E/S") of each investee company.

100% of the companies, corporate bond issuers and sovereign debt the Fund invested in were assessed under the Investment Manager's Financials Team ESG Framework, which was used to assess and deliver the environmental or social characteristics promoted by the Fund.

⁸ Excluding cash within the top 15 largest investments.

During the reference period, an average of 90.8% of investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund⁹.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)

● In which economic sectors were the investments made?

Economic Sectors	% Assets ¹⁰
Financials	78.2
Cash and Cash Equivalents	14.0
Government Bonds	7.8

The Fund has held one company with exposure to fossil fuels during the reference period: **Riverstone Credit Opportunities Income**. Riverstone is a closed-ended investment company which invests exclusively in the global energy industry through a portfolio of senior secured loans. Whilst traditionally focusing on energy infrastructure, Riverstone has increasingly lent to energy transition businesses in recent years, with these companies accounting for Riverstone’s entire loan portfolio at the end of December 2024. Furthermore, in order to ensure that investments have a positive impact on the climate, each deal is structured as either a ‘Green’ or ‘Sustainability-linked’ loan.

Jefferies Financial Group Inc. is a global, full-service investment banking and capital markets company. Jefferies have an investment in the company JETX Energy, LLC

⁹ The figure shows the average percentage of the Fund’s assets, including cash, on a portfolio weighted basis, aligned with the Fund’s characteristics as a result of passing the minimum criteria for investment set out in the Financials Team ESG Framework. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted alignment as each calendar quarter end.

¹⁰ This shows the percentage of the Fund’s long-only assets within each economic sector as at 31 December 2024, excluding cash and other derivatives.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Financial Credit Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

which engages in the exploration, development and production of oil and gas from onshore, unconventional resource areas.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹¹?

Yes:

In fossil gas

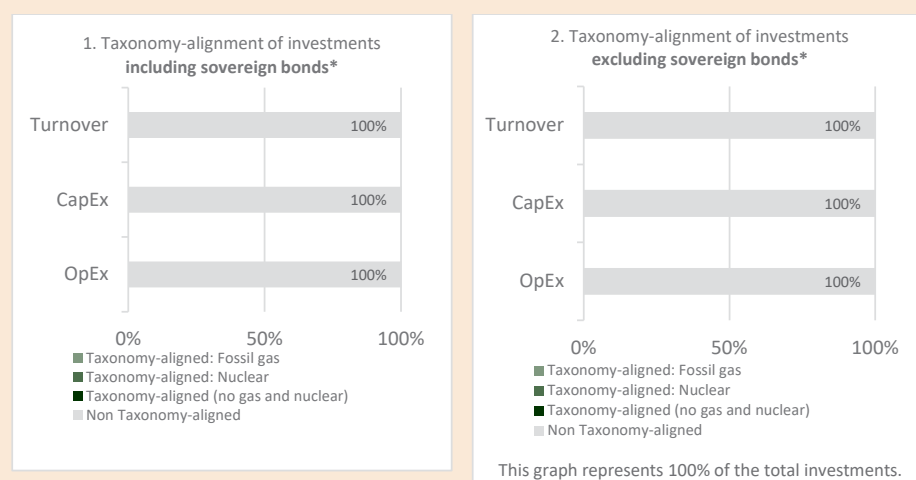

In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

¹¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy Regulation are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 9.2% of the Fund’s investments identified as #2 Other in the above diagram were held in cash in line with the Fund’s Investment Policy, or in other instruments such as government bonds. There were no minimum environmental or social safeguards applicable to these investments.¹²

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In accordance with the investment strategy for the Fund, the Investment Manager assessed every prospective investee company using the Financials Team ESG Framework. This involves an analysis of the company’s environmental, social and governance profile, against a variety of indicators, including but not limited to, total GHG emissions, emissions intensity per revenue, the quality of data security and the level of director remuneration, and the assignment of a specific ESG rating from ‘AAA’ to ‘CCC’.

The governance analysis also includes a qualitative factor, based on an assessment of the company’s risk management practices, strategic consistency, litigation/reputational risk and stakeholder engagement, informed through interactions with the company and the responsiveness of its management. When considering risk management practices, both management structures and tax compliance are assessed.

Every existing holding is assessed on the same basis and its alignment is monitored on an on-going basis. The Investment Manager used a variety of information sources to assess

¹² This figure shows the portfolio weighted average of the assets of the Fund, including cash, which were classified as other investments and therefore not aligned with the characteristics during the reference period. The average alignment is calculated as a simple average of the portfolio weighted alignment at each quarter end

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Financial Credit Fund continued

each company including, but not limited to, company financial accounts and statements, third party research, and engagement and dialogue with management.

During the reference period, for example, engagement with Newcastle Building Society reassured the Investment Manager that the company's social rating was still appropriate. This followed poor Glassdoor reviews, and confirmation by Society's management that they were aware of these reviews, but placed more attention on internal surveys, which have been undertaken frequently, and have to date had highly positive response rates.

Further reassuring interactions were conducted, during the period, with VEF Group, a Swedish-domiciled investment company, investing in private FinTech companies, predominantly across emerging markets (Brazil, India and Mexico). The discussion here covered the importance of sustainability targets despite the company's limited footprint. It was made clear that VEF's main impact environmental impact came through portfolio companies, and the Investment Manager was reassured that dialogue concerning this topic had been initiated with the various management teams.

Another example of the Investment Manager's interaction with company management during the period was with Banque Federative du Credit Mutuel, the holding company of Cr dit Mutuel Alliance F d rale Group, the third-largest retail and commercial banking franchise in France, which also has well-established market positions in both life and non-life insurance. The discussion focused on the company's environmental and social impact investing, along with its approach to dealing with various stakeholders. This engagement, along with an analysis of the company's disclosure, and third party research, resulted in the company receiving an ESG rating of 'A'.

One of the Fund's holdings was exited during the reference period, driven in part by a reassessment of the company's qualitative governance scores. This reassessment, which included a review of the company's engagement and transparency, resulted in a downgrade of the company's governance rating from 'BB' to 'B'. With this considered to be an automatic threshold for advanced due diligence, and the downgrade relating to the company's engagement and transparency, it was considered more prudent to exit the entire position.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● *How does the reference benchmark differ from a broad market index?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

Financial Opportunities Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Financial Opportunities Fund (the “Fund”)

Legal entity identifier: 5493002S3AKH0NJB3B27

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<div><input checked="" type="radio"/> <input type="radio"/> Yes</div>	<div><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="radio"/> No</div>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy. Using the Investment Manager’s proprietary ESG analysis tool (the ‘Financials Team ESG Framework’), the Fund excluded companies which were deemed to demonstrate poor environmental or social characteristics as assessed through the Financials Team ESG Framework and its exclusion policy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

The Investment Manager used the Financials Team ESG Framework to measure the attainment of the Fund's ESG characteristics. The Investment Manager also used adherence to the Fund's exclusion policy as an indicator to measure attainment of the Fund's environmental and social characteristics.

All companies in the Fund were assessed under the Financials Team ESG Framework. Further to this, all companies rated 'CCC' in accordance with the overall framework and all companies rated 'CCC' for governance under the Financial Team ESG framework were excluded from the Fund.

As a result, over the reference period, on average 96.6% of the investments of the Fund, on a portfolio weighted basis as a percentage of total assets including cash, were used to meet the environmental or social characteristics promoted by the Fund¹. Also, at the time of the Fund's investment, 0% of investee companies failed the exclusion criteria.

During the reference period, the Fund opened 68 and closed 67 long positions. This resulted in a marginal change in the internal ESG rating distribution of the Fund, with the percentage of 'A' rated companies increasing marginally to 33%, while the percentage of 'BBB' rated companies increased by 6% to 21%.

Rating ²	Mar-24	Jun-24	Sep-24	Dec-24	Average

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

³ This table shows the simple average of the Financials Team ESG Framework ratings distribution of the Fund's assets, excluding cash, at the end of each quarter.

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives.

Revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. Where material revenues were flagged, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero.

The Investment Manager considered the board gender diversity of investee companies, and, where it deemed appropriate, used its tools of active ownership to encourage better diversity practices.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

The Investment Manager also took into account as part of its process the standards of the United Nations Global Compact, and the Organisation for Economic Co-Operation and Development’s Guidelines for Multinational Enterprises. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident to decide the appropriate action to take: whether to monitor, enter enhanced engagement, or divest from the company. No companies were involved in severe norms violations over the reference period so no action was taken.

The Fund opened a position in KKR & Co (KKR) during the year. The company has been highlighted by a third party ESG provider for having potential deficiencies regarding Norms Based Standards, specifically in relation to their Impact on Local Communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Financial Opportunities Fund continued

Prior to opening the position, the Investment Manager engaged with the company's management to determine the veracity and severity of these allegations. This engagement indicated that the company was actively addressing these concerns, and that recent capital markets activity had seen complete support from local communities.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ⁴		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁵
GHG Emissions (TCO ₂ e)	Scope 1	31.4	98.3%	36.2	99.6%	-13.2%

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The Fund invested primarily in the securities of financial sector companies globally. The Investment Manager used the Financials Team ESG Framework to assess the environmental and/or social characteristics (“E/S”) of each investee company.

100% of the companies the Fund invested in were assessed under the Financials Team ESG Framework, which was used to assess and deliver the environmental or social characteristics promoted by the Fund.

During the reference period, an average of 96.6% of investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund⁷.

⁶ Excluding cash within the top 15 largest investments.

⁷ The figure shows the average percentage of the Fund’s assets, including cash, on a portfolio weighted basis, aligned with the Fund’s characteristics as a result of passing the minimum criteria for investment set out in the Financials Team ESG Framework. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted alignment as at each calendar quarter end.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

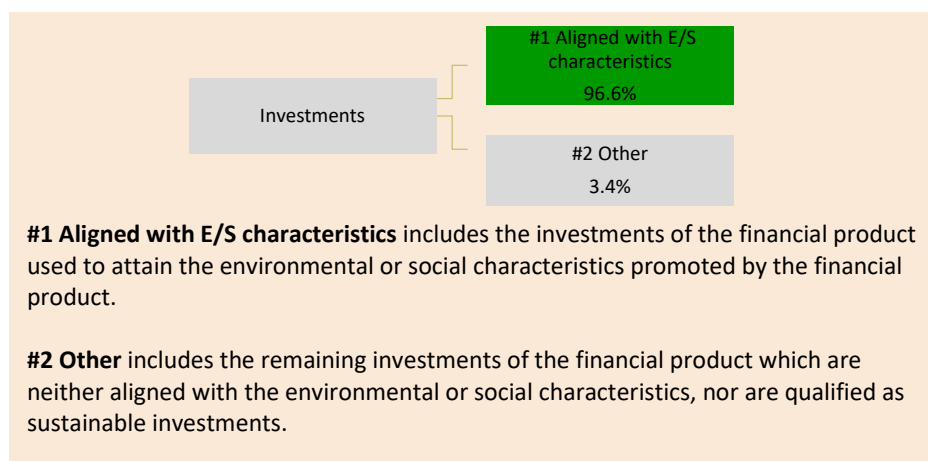

Financial Opportunities Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)

● In which economic sectors were the investments made?

Economic Sectors	% Assets ⁸
Financials	92.4
Cash and Cash equivalents	5.6
Consumer Discretionary	1.3
Real Estate	0.7

The Fund's only exposure to fossil fuels is through **Berkshire Hathaway Inc.** Berkshire Hathaway and its subsidiaries are engaged in diverse business activities, including insurance and reinsurance, utilities and energy, freight rail transportation, manufacturing, services and retailing. The Berkshire Hathaway Energy (BHE) subsidiary is a global leader in energy production, transportation, and delivery, utilizing a variety of fuel sources, including coal, natural gas, wind, hydro, solar, nuclear, geothermal, and biomass.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

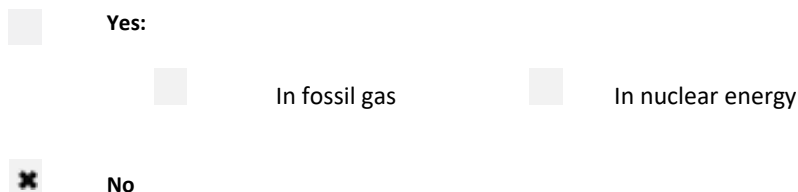

⁸ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

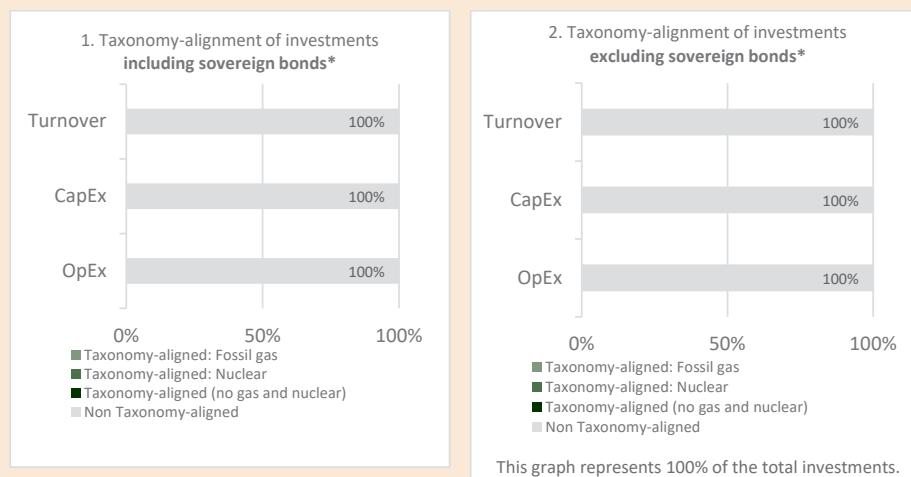

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

● Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁹?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

● What was the share of investments made in transitional and enabling activities?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy Regulation are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Financial Opportunities Fund continued

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

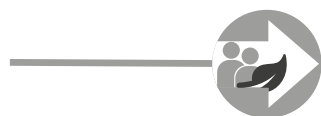

What was the share of socially sustainable investments?

The Fund does not invest in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 3.4% of the Fund’s investments identified as #2 Other in the above diagram were held in cash in line with the Fund’s Investment Policy. There were no minimum environmental or social safeguards applicable to these investments.¹⁰

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In accordance with the investment strategy for the Fund, the Investment Manager assessed every prospective investee company using the Financials Team ESG Framework. This involves an analysis of the company’s environmental, social and governance profile against a variety of indicators, including but not limited to total GHG emissions, GHG emissions intensity per revenue, the quality of data security and the level of director remuneration, and the assignment of a specific ESG rating from ‘AAA’ to ‘CCC’.

The governance analysis also includes a qualitative factor, based on an assessment of the company’s risk management practices, strategic consistency, litigation/reputational risk and stakeholder engagement, informed through interactions with the company and the responsiveness of its management. When considering risk management practices, both management structures and tax compliance are assessed.

Every existing holding is assessed on the same basis and its alignment is monitored on an ongoing basis. The Investment Manager used a variety of information sources to assess each company including, but not limited to, company financial accounts and statements, third party research, and engagement and dialogue with management.

During the reference period, for example, engagement with BFF Bank management reassured the Investment Manager that the company’s governance rating, including the qualitative factor, was still appropriate. Through email correspondence as well as virtual meetings, the Investment Manager was able to challenge company management about

¹⁰ This figure shows the portfolio weighted average of the assets of the Fund, including cash, which were classified as other investments and therefore not aligned with the characteristics during the reference period. The average alignment is calculated as a simple average of the portfolio weighted alignment at each quarter end.

board behaviour, following several members stepping down. The Investment Manager also discussed the company's risk culture, and interaction with its domestic regulator.

Further reassuring engagement was also conducted, during the period, with a global investment company. The Investment Manager was able to challenge company management, via email, and were reassured that the company was taking account of various stakeholders' concerns and was also engaging with third party ESG providers regarding the issue.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

Global Absolute Return Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Global Absolute Return Fund (the “Fund”)
Legal entity identifier: 549300FZYEQXKDUP14

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

--	--

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy.

The Fund sought to make its long investments in convertible bonds issued by companies which are positively aligned with the Investment Manager’s proprietary ESG analysis framework (the “Global Absolute Return Fund Framework”).

The Investment Manager considered the alignment of issuing companies with the United Nations Sustainable Development Goal (“UN SDG”) 8, which concerns the promotion of sustained, inclusive and sustainable economic growth, full and productive employment for all.

For the avoidance of doubt, the Fund invested in convertible bonds issued by companies which were not aligned with the Global Absolute Return Fund Framework where, in the Investment Manager’s view, such an investment would nevertheless represent an attractive opportunity for the Fund. Short positions taken by the Fund may have been made without the intention of promoting environmental and social characteristics.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did the sustainability indicators perform?***

At the time of the Fund’s investment, 0% of investee companies over the reference period failed the exclusion criteria.

During the reference period, the Fund averaged 84.6%¹ of investments in convertible bonds issued by companies that were positively aligned with the Global Absolute Return Fund Framework. This equated to an average of 84.1%² of the long market value of the Fund that was positively aligned with the Global Absolute Return Fund Framework.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

¹ This shows the percentage of issuers of the convertible bonds held by the Fund, on an equal weighted basis, that scored positively against the Global Absolute Return Fund Framework. The average is calculated as a simple average of the Fund’s percentages as at 31 March 2024, 30 June 2024, 30 September 2024 and 31 December 2024.

² This shows the percentage of the long market value of the Fund’s assets on a portfolio weighted basis, that scored positively against the Global Absolute Return Fund Framework. The average is calculated as a simple average of the Fund’s percentages as at 31 March 2024, 30 June 2024, 30 September 2024 and 31 December 2024. The Fund does take short positions in the equity of issuers of the convertible bonds held by the Fund to hedge the financial risk involved in holding the convertible bond.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Absolute Return Fund continued

● ...and compared to previous periods?

Alignment ³	2022	2023
Investments positively aligned to the Global Absolute Return Fund Framework ⁴	80.9%	78.0%
Long market value positively aligned to the Global Absolute Return Fund Framework ⁵	82.6%	79.8%

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

³ Please note that the 2022 and 2023 Fund alignment figures provided in prior annual reports were incorrect due to a calculation error. These figures were calculated on the basis that an investment is aligned with the characteristics of the Fund where the underlying company scored positively on over 50% of the Fund's indicators. The Fund's SFDR prospectus disclosure reflects that an investment is aligned with the characteristics of the Fund where the underlying company scores positively on 50% or more of the Fund's indicators, after accounting for any negative performance on the Fund's indicators. The correct figures for 2022 and 2023 have been reported here but do not align with reports issued in relation to the Fund prior to this date. Please use the 2022 and 2023 figures provided in this report for all analysis and comparisons in relation to these periods.

⁴ This shows the percentage of issuers of the convertible bonds held by the Fund, on an equal weighted basis, that scored positively against the Global Absolute Return Fund Framework. The average is calculated as a simple average of the Fund's percentages as at each quarter end.

⁵ This shows the percentage of the long market value of the Fund's assets on a portfolio weighted basis that scored positively against the Global Absolute Return Fund Framework. The average is calculated as a simple average of the Fund's percentages as at each quarter end. The Fund does take short positions in the equity of issuers of the convertible bonds held by the Fund to hedge the financial risk involved in holding the convertible bond.

— — — Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

This Fund did not consider the principle adverse impacts of its investment decisions on sustainability factors pursuant to Article 7 of the SFDR during the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The Fund sought to make its long investments in convertible bonds issued by companies which are positively aligned with the Global Absolute Return Fund Framework.

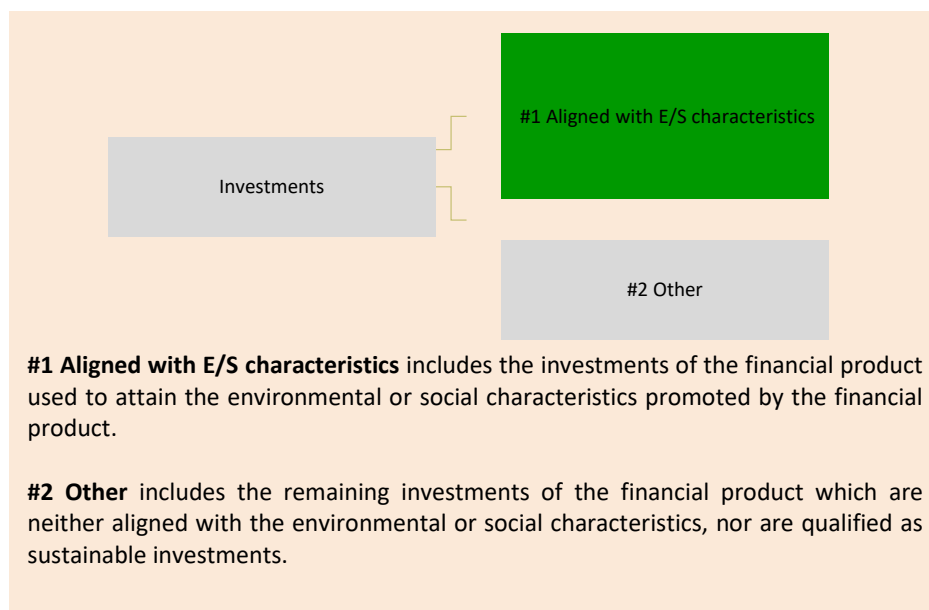

100% of the issuing companies the Fund invested in were assessed under the Investment Manager's Global Absolute Return Fund Framework.

During the reference period, an average of 84.1%⁷ of the Fund's long market value was aligned with the environmental or social characteristics promoted by the Fund.

⁶ Excluding cash within top 15 largest investments.

⁷ This shows the percentage of the long market value of the Fund's assets, on a portfolio weighted basis, that scored positively against the Global Absolute Return Fund Framework. The average is calculated as a simple average of the Fund's percentages as at 31 March 2024, 30 June 2024, 30 September 2024 and 31 December 2024. The Fund does take short positions in the equity of issuers of the convertible bonds held by the Fund to hedge the financial risk involved in holding the convertible bond.

All long positions adhered to the exclusions criteria set out in the investment strategy. Short positions taken by the Fund have been made without the intention of promoting environmental and social characteristics.

● In which economic sectors were the investments made?

Economic Sectors	% Assets ⁸
Information Technology	21.6
Industrials	18.0
Financials	16.5
Materials	13.1
Health Care	12.9
Communication Services	11.5
Consumer Discretionary	6.9
Energy	5.1
Consumer Staples	3.6
Real Estate	2.9

Further to the information provided above, the SFDR requires Article 8 SFDR funds to identify their exposure to the value chain or supply chain of the fossil fuel sector.

While the Fund excluded from the long book companies that derive the majority of their revenues from thermal coal production and distribution, the Fund did have

⁸ This shows the percentage of the Fund's long assets within each economic sector as at 31 December 2024.

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

Global Absolute Return Fund continued

exposure to the value chain and the supply chain of the fossil fuel sector over the reference period.

The Fund, when investing in the natural resources sector, places primacy on companies whose operations either are, or are likely to migrate to be, in compliance with the need to transition to a sustainable, circular economy.

Saipem is a perfect example of this. Saipem is one of the largest service providers to the offshore energy sector. Historically it has focused exclusively on oil & gas drilling activities but has increasingly been shifting towards providing services to the offshore wind sector, an area that is currently the key focus of growth for Saipem.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁹?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

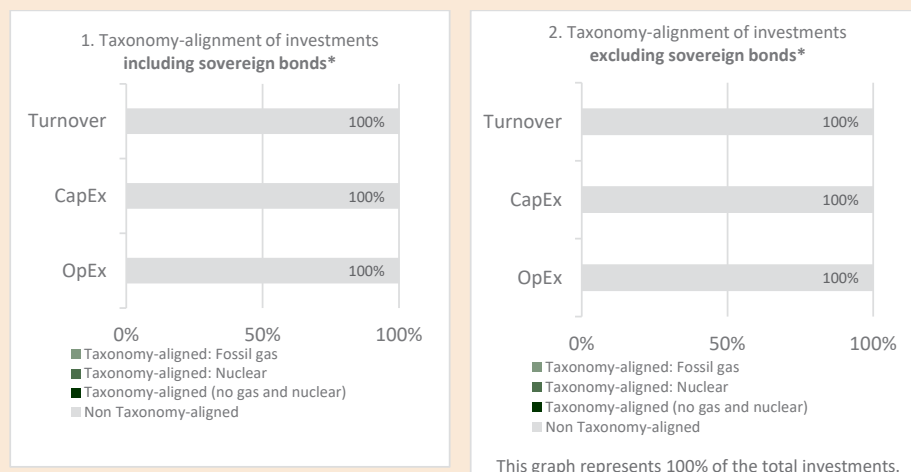

☒ No

⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Absolute Return Fund continued

The investments identified as #2 Other in the above diagram included, but were not limited to, convertible bonds and short equity derivatives and were held to attain the Fund's investment objective: to generate both income and long-term capital growth, or for efficient portfolio management. Furthermore, positions were held in cash and derivative instruments in line with the Fund's Investment Policy.

Long positions not aligned with the environmental and social characteristics are subject to minimum environmental and social safeguards through the exclusion criteria set out in the Fund's SFDR prospectus disclosure. Short positions taken by the Fund have been made without the intention of promoting environmental or social characteristics and no minimum environmental or social safeguards are applicable to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In the first instance, the Investment Manager carried out a negative exclusionary screening process on the Fund's investment universe and excluded from the long book investments that were in breach of the Fund's exclusions policy.

The Investment Manager used the Global Absolute Return Fund Framework to conduct detailed reviews of each investment and proposed investment, updating each on a periodic basis.

These reviews considered the alignment of each company with the indicators within SDG 8 and assigned a score with justification and documentation made for each. Further to this, the Investment Manager assessed good governance practices by reviewing the issuing company's compliance with relevant tax legislation, its employee relations and remuneration policies, and the soundness of its management practices.

The Investment Manager used a variety of information sources to evaluate a company's performance in these areas including, but not limited to, company financial accounts and statements, third party research, and engagement and dialogue with management.

In particular, the Investment Manager conducted ESG-specific interactions with 25 companies during the year to both complement the Fund's ESG research and to also attempt to facilitate improvements at the target companies. For example, the Investment Manager sold two positions within the year following engagements that yielded unsatisfactory responses to alignment related queries. Furthermore, the Fund Manager built upon engagements in the previous periods to conduct several follow up engagements during the period, which resulted in progress monitoring and increased influence through relationship building.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

(unaudited) continued

Global Convertible Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Global Convertible Fund (the “Fund”)
Legal entity identifier: 549300YDGCXD7OYRK411

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<div><input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes</div> <div><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%<div><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div> <div><input type="checkbox"/> It made sustainable investments with a social objective: ____%</div>	<div><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No</div> <div><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments<div><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> with a social objective</div></div> <div><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</div>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy.

The Fund sought to make its long investments in convertible bonds issued by companies which are positively aligned with the Investment Manager’s proprietary ESG analysis framework (the “Global Convertible Fund Framework”).

The Investment Manager considered the alignment of issuing companies with the United Nations Sustainable Development Goal (“UN SDG”) 8, which concerns the promotion of

sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.

For the avoidance of doubt, the Fund invested in convertible bonds issued by companies which were not aligned with the Global Convertible Fund Framework where, in the Investment Manager's view, such an investment would nevertheless represent an attractive opportunity for the Fund. Short positions taken by the Fund may have been made without the intention of promoting environmental and social characteristics.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did the sustainability indicators perform?***

At the time of the Fund's investment, 0% of investee companies over the reference period failed the exclusion criteria.

During the reference period, the Fund averaged 86.4%¹ of investments in convertible bonds issued by companies that were positively aligned with the Global Convertible Fund Framework. This equated to an average of 87.4%² of the long market value of the Fund that was positively aligned with the Global Convertible Fund Framework.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

¹ This shows the percentage of issuers of the convertible bonds held by the Fund, on an equal weighted basis, that scored positively against the Global Convertible Fund Framework. The average is calculated as a simple average of the Fund's percentages as at 31 March 2024, 30 June 2024, 30 September 2024 and 31 December 2024.

² This shows the percentage of the long market value of the Fund's assets on a portfolio weighted basis that scored positively against the Global Convertible Fund Framework. The average is calculated as a simple average of the Fund's percentages as at 31 March 2024, 30 June 2024, 30 September 2024 and 31 December 2024. The Fund does take short positions in the equity of issuers of the convertible bonds held by the Fund to hedge the financial risk involved in holding the convertible bond.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

³ Please note that the 2022 and 2023 Fund alignment figures provided in prior annual reports were incorrect due to a calculation error. These figures were calculated on the basis that an investment is aligned with the characteristics of the Fund where the underlying company scored positively on over 50% of the Fund's indicators. The Fund's SFDR prospectus disclosure reflects that an investment is aligned with the characteristics of the Fund where the underlying company scores positively on 50% or more of the Fund's indicators, after accounting for any negative performance on the Fund's indicators. The correct figures for 2022 and 2023 have been reported here but do not align with reports issued in relation to the Fund prior to this date. Please use the 2022 and 2023 figures provided in this report for all analysis and comparisons in relation to these periods.

⁴ This shows the percentage of issuers of the convertible bonds held by the Fund, on an equal weighted basis, that scored positively against the Global Convertible Fund Framework. The average is calculated as a simple average of the Fund's percentages as at each quarter end.

⁵ This shows the percentage of the long market value of the Fund's assets on a portfolio weighted basis that scored positively against the Global Convertible Fund Framework. The average is calculated as a simple average of the Fund's percentages as at each quarter end. The Fund does take short positions in the equity of issuers of the convertible bonds held by the Fund to hedge the financial risk involved in holding the convertible bond.

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

This Fund did not consider the principle adverse impacts of its investment decisions on sustainability factors pursuant to Article 7 of the SFDR during the reference period.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Convertible Fund continued

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2024

Largest investments	Sector	% Assets	Country
Cellnex 0.5% 07/2028	Communication Services	6.2	Spain
Jet2 1.625% 06/2026	Industrials	5.9	United Kingdom
Helios Towers 2.875%	Communication Services	4.5	Mauritius
Nutanix Inc 0.25% 10/2027	Information Technology	4.0	United States
Uber Technologies 0.875%	Industrials	3.8	United States
SBI Holdings 0% 07/2031	Financials	3.7	Japan
Alibaba Group Holding 0.5%	Consumer Discretionary	3.4	Cayman Islands
IAG 1.125% 05/2028	Industrials	3.3	Spain
Coinbase 0.25% 04/2030	Financials	3.3	United States
Just Eat Takeaway 0%	Consumer Discretionary	3.2	Netherlands
Saipem SpA 2.875% 09/2029	Energy	3.2	Italy
Galaxy Digital Holdings 2.5%	Financials	3.1	Cayman Islands
MP Materials Corp 3%	Materials	3.0	United States
Air Transport Services Group	Industrials	2.8	United States
Telix Pharmaceuticals	Health Care	2.8	Australia

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2(17) of the SFDR.

What was the asset allocation?

The Fund sought to make its long investments in convertible bonds issued by companies which are positively aligned with the Global Convertible Fund Framework.

100% of the issuing companies the Fund invested in were assessed under the Investment Manager's Global Convertible Fund Framework.

During the reference period, an average of 69.1%⁶ of the Fund's long market value was aligned with the environmental or social characteristics promoted by the Fund.

All long positions adhered to the exclusions criteria set out in the investment strategy. Short positions taken by the Fund have been made without the intention of promoting environmental and social characteristics.

Asset allocation describes the share of investments in specific assets.

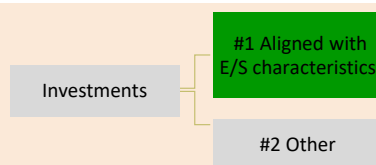

⁶ This shows the percentage of the long market value of the Fund's assets, on a portfolio weighted basis, that scored positively against the Global Convertible Fund Framework. The average is calculated as a simple average of the Fund's percentages as at 31 March 2023, 30 June 2023, 30 September 2023 and 31 December 2023. The Fund does take short positions in the equity of issuers of the convertible bonds held by the Fund to hedge the financial risk involved in holding the convertible bond.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

● In which economic sectors were the investments made?

Economic Sectors	% Assets ⁷
Information Technology	22.9
Industrials	16.4
Health Care	14.9
Consumer Discretionary	14.6
Financials	12.3
Communication Services	10.6
Materials	4.4
Energy	3.6

Further to the information provided above, the SFDR requires Article 8 SFDR funds to identify their exposure to the value chain or supply chain of the fossil fuel sector.

While the Fund excluded from the long book companies that derive the majority of their revenues from thermal coal production and distribution, the Fund did have exposure to the value chain and the supply chain of the fossil fuel sector over the reference period.

The Fund, when investing in the natural resources sector, places primacy on companies whose operations either are, or are likely to migrate to be, in compliance with the need to transition to a sustainable, circular economy.

Saipem is a perfect example of this. Saipem is one of the largest service providers to the offshore energy sector. Historically it has focused exclusively on oil & gas drilling activities but has increasingly been shifting towards providing services to the offshore wind sector, an area that is currently the key focus of growth for Saipem.

⁷ This shows the percentage of the Fund's long assets within each economic sector as at 31 December 2023.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Convertible Fund continued

Another example is World Kinect Corp, which was held over the investment period and is involved in logistics, not drilling or refining, of aviation and other fuel. The Investment Manager spoke with management and is thrilled with the strategic direction the company is taking towards supporting SAF and renewable diesels, as well as the investment the sustainability team has made in powering their operations with renewable sourced energy.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁸?

Yes:

In fossil gas

In nuclear energy

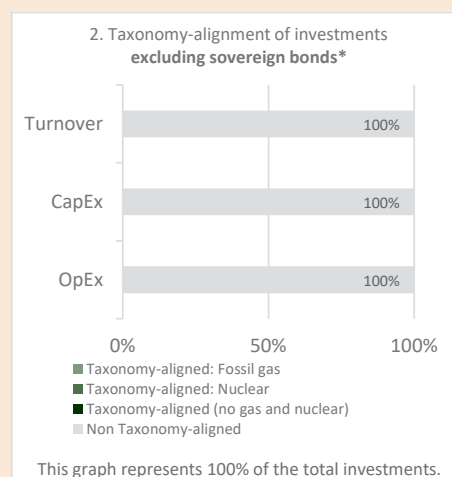

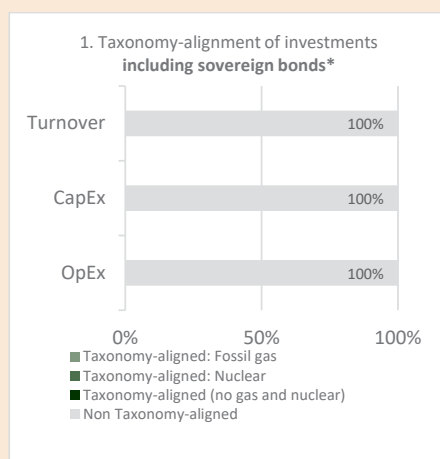

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The investments identified as #2 Other in the above diagram included, but were not limited to, convertible bonds and short equity derivatives and were held to attain the Fund’s investment objective: to generate both income and long-term capital growth, or for efficient portfolio management. Furthermore, positions were held in cash and derivative instruments in line with the Fund’s Investment Policy.

Long positions not aligned with the environmental and social characteristics are subject to minimum environmental and social safeguards through the exclusion criteria set out in the Fund’s SFDR prospectus disclosure. Short positions taken by the Fund have been made without the intention of promoting environmental or social characteristics and no minimum environmental or social safeguards are applicable to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In the first instance, the Investment Manager carried out a negative exclusionary screening process on the Fund’s investment universe and excluded from the long book investments that were in breach of the Fund’s exclusions policy.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Convertible Fund continued

The Investment Manager used the Global Convertible Fund Framework to conduct detailed reviews of each investment and proposed investment, updating each on a periodic basis.

These reviews considered the alignment of each company with the indicators within SDG 8 and assigned a score with justification and documentation made for each. Further to this, the Investment Manager assessed good governance practices by reviewing the issuing company's compliance with relevant tax legislation, its employee relations and remuneration policies, and the soundness of its management practices.

The Investment Manager used a variety of information sources to evaluate a company's performance in these areas including, but not limited to, company financial accounts and statements, third party research, and engagement and dialogue with management.

In particular, the Investment Manager conducted ESG-specific interactions with 25 companies during the year to both complement the Fund's ESG research and to also attempt to facilitate improvements at the target companies. For example, the Investment Manager sold two positions within the year following engagements that yielded unsatisfactory responses to alignment related queries. Furthermore, the Fund Manager built upon engagements in the previous periods to conduct several follow up engagements during the period, which resulted in progress monitoring and increased influence through relationship building.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How does the reference benchmark differ from a broad market index?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How did this financial product perform compared with the reference benchmark?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

Global Insurance Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Global Insurance Fund (the “Fund”)
Legal entity identifier: 549300NR2E7UPARF0U07

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<div><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> Yes</div> <div><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%<div><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div> <div><input type="checkbox"/> It made sustainable investments with a social objective: ____%</div>	<div><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No</div> <div><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments<div><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> with a social objective</div></div> <div><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</div>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invests broadly in the global insurance industry but predominantly focuses on the non-life insurance subsector (also known as property and casualty insurance), which the Investment Manager believes positively impacts most, if not all, the UN SDGs.

Portfolio holdings have been consistently evaluated through the reference period in line with the Fund’s ESG methodology (the ‘Global Insurance UN SDG Matrix’). The Investment Manager was active during the Financial Year 2023/2024 Proxy Voting season, which predominantly took place in April and May 2024, engaging with numerous management teams of companies in the Fund, which is discussed in more detail below, as part of the Fund’s ongoing assessment of Principal Adverse Impacts (“PAI”). The Fund also published

an annual Significant Vote and Engagement Report in June 2024 which provides further details. This included, where appropriate, taking action which is evidenced from the Fund's shareholder voting log.

● ***How did the sustainability indicators perform?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund used the Global Insurance UN SDG Matrix to measure the attainment of the Fund's ESG characteristics.

The Global Insurance UN SDG Matrix sets out the weighting of the Fund in each area of insurance underwriting risk, and then identifies whether, and to what extent, the Fund's holdings within that underwriting risk area are deemed to have contributed to each UN SDG over the reference period.

The Global Insurance UN SDG Matrix incorporates both the Investment Manager's environmental, social and governance ('ESG') scoring of investee companies and the information received by the Investment Manager as a result of interactions with those investee companies. Engagements may be driven by an evaluation of the annual change in ESG scores at both a company and Fund level.

As at 31 December 2024, 100% of the underwriting mix of the Fund's investments, excluding the Fund's cash and any derivative holdings, had at least a positive impact on one or more of the UN SDGs, as demonstrated by the Global Insurance UN SDG Matrix.¹

The Fund is primarily invested in listed equities. However, the Fund does have investments in several unlisted retrocession funds which are not listed entities and are running off. These retrocession funds are collective investment schemes in which the collective investment proceeds are used to underwrite a range of reinsurance protections, primarily for reinsurers and typically with a term of one year.

Recent studies by UN working groups have been conducting further analysis into the important role of climate on the UN SDGs which is relevant for the insurance sector. This was highlighted in a recent report entitled "Synergy Solutions for a World in Crisis; Tackling Climate and SDG Action Together" that noted climate and the SDGs are inextricably intertwined with the UN's ambitions to bridge these trillion-dollar investment gaps, where we believe insurance has a critical role to play.

As part of this analysis, their work highlighted that all 169 SDG targets were examined for potential connections to measures for climate mitigation and adaptation, with sixty-four of the targets found to have potential co-benefits to climate mitigation and adaptation. Of particular interest to the Fund's UN SDG alignment evaluation was a focus on synergies with respect to mitigation where we believe the insurance industry plays a key role. As a result of this insight we have

¹ The figure shown is calculated with reference to the underwriting mix of each investee company and at least one aspect of that investee company's underwriting mix having a positive, strong or high impact on one or more of the UN SDGs.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

increased the Fund's conviction in the degree of favourable impact on the UN SDGs across several categories in 2023 which correspondingly has led to an increase in the number of assessed high and strong impact factors.

SDG GOALS

GOAL 1: No Poverty

GOAL 2: Zero Hunger

GOAL 3: Good Health and Well-being

GOAL 4: Quality Education

GOAL 5: Gender Equality

GOAL 6: Clean water and Sanitation

GOAL 7: Affordable and Clean Energy

GOAL 8: Decent Work and Economic Growth

GOAL 9: Industry, Innovation and Infrastructure

GOAL 10: Reduced Inequality

GOAL 11: Sustainable Cities and Communities

GOAL 12: Responsible Consumption and Production

GOAL 13: Climate Action

GOAL 14: Life Below Water

GOAL 15: Life on Land

GOAL 16: Peace and Justice Strong Institutions

GOAL 17: Partnerships to achieve the Goal

The Investment Manager assesses a company's impact on the UN SDGs based on five categorisations, namely; (i) high impact (X dark green), (ii) strong impact (X light green), (iii) positive impact (X light blue), (iv) no impact (white) or (v) adverse impact (X orange).

High impact actions are quantifiable actions taken by portfolio companies directly in support of specific UN SDGs, strong impacts reflect that company actions during the reference period have had indirect benefits from a UN SDG perspective and positive impacts reflect harder to quantify or more holistic impacts on the UN SDGs.

Adverse impacts are actions taken by portfolio companies, or occurrences at portfolio companies, that run counter to the intention and spirit of the UN SDGs.

Year on Year Changes; Underwriting Portfolio

During the year, there has been a modest increase in the amount of strong impact effects on the UN SDGs across Fund companies. This reflects the improved alignment of the specific actions of Fund holdings as well as a decline in the percentage of poorer contributing companies as a result of a number of Fund sales.

From an underwriting portfolio perspective, the Investment Manager has seen an increased focus by companies on reducing claims cycle times as a result of an enhancement in technology and artificial intelligence, with data now demonstrating tangible progress across a number of companies. At this stage these initiatives are primarily benefiting personal lines-linked lines of business (auto, homeowners and medical/personal accident lines) given that these claims are typically less complex than in other parts of the market but over time other lines may benefit. An acceleration in the timeline of recovery post event directly contributes to the enhancement of economic growth and further enhances the objectives of other UN SDGs such as Life on Land and Partnerships compared to our previous assessment.

On commercial insurance lines, the Investment Manager has noted companies, over the last few years in particular, taking a more active role in education around climate impacts. This includes the provision of resources, alongside insights into their underwriting criteria, to enable customers to meet expectations in areas such as greenhouse gas ("GHG") emission reductions. These initiatives demonstrate the increased promotion of more sustainable development models, as part of the insurance buying process, as it pertains to the underwriting of risk. Separately education in respect of Diversity and Inclusion ("D&I") initiatives continues to impact the hiring, development and retention of the workforce.

The Fund has seen a gradual increase in the proportion of reinsurance written following the improvement in market conditions since 1 January 2023. The Investment Manager is seeing impactful partnerships across insurance, NGOs, government and the private sector in driving progress towards a sustainable future. The matrix subsequently reflects a strong impact in 'SDG 17 -Partnerships for the Goals' - reflecting Fund holdings' market leading approaches to sustainability in the reinsurance markets. Previously, the analysis gave credit to initiatives across property catastrophe insurance, but Fund holdings' efforts go much further than this and benefit many other insurance lines, including 'Other property risks'.

Year on Year Changes; Corporate ESG Assessment

As part of the review of the governance factors related to the companies invested in and their impact on the UN SDGs, the Investment Manager has seen an increase in

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

the quantum of impact from positive to strong in a number of areas, including around innovation, reflecting the enhanced use of technology. In addition, the Investment Manager continues to see a greater use of partnerships to achieve sustainability objectives.

Turning to environmental factors, the Fund companies in aggregate have improved, as reflected in the improvement in aggregate fund scores. This is because we are seeing many more categories beyond climate action showing to have a strong impact, rather than merely a positive impact. More tangible impacts have been observed across categories such as sustainable living, life on land, and clean energy, supported by initiatives from a range of material shareholders.

In terms of social factors, the Investment Manager has noted a moderate improvement across the portfolio. Categories such as social equality, innovation, and sustainable living are now categorised as a strong impact given the tangible progress many of the Fund's holdings have made on social factors including D&I initiatives.

Year on Year Changes; Engagement Impacts

The Investment Manager has reduced the impact from sustainable accounting, which details how ESG impacts are measured and reported, from a high impact to a strong impact. This reduction is due to the level of progress to date across the portfolio and initiatives that are already underway in this space which reduce the future potential favourable impacts we expect to see. In addition, we have reduced the impact on the UN SDGs from Nature Based Solutions given the quantum of initiatives remains modest at Fund investee companies and has not changed year on year. The Investment Manager is hopeful this will be an area of increasing focus in future years.

● ...and compared to previous periods?

As at 31 December 2024, 100% of the underwriting mix of the Fund's investments, excluding the Fund's cash and any derivative holdings, had at least a positive impact on one or more of the UN SDGs, as demonstrated by the Global Insurance UN SDG Matrix.² In all previous reporting periods, 100% of the underwriting mix of the Fund's investments, excluding the Fund's cash and any derivative holdings, had at least a positive impact on one or more of the UN SDGs.

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

² The figure shown is calculated with reference to the underwriting mix of each investee company and at least one aspect of that investee company's underwriting mix having a positive, strong or high impact on one or more of the UN SDGs.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

GHG Emissions - During the financial year 2023/2024 proxy season, which predominantly took place in April and May 2024, the Fund was involved in 7 significant votes directly linked to the Fund’s consideration of principal adverse impacts.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

Included within these votes, Chubb and Travelers, both investee companies of the Fund, were again subject to shareholder resolutions around increasing reporting on GHG emissions and related disclosures. For the third year in a row, the Investment Manager participated in extensive engagement with both companies around these resolutions, and noted the significant additional disclosures produced by both companies following response to shareholder engagement, with the Investment Manager being a key stakeholder in these discussions. The 2023 Sustainability reports for both companies, which were published in 2024, have gone further in quantifying principal adverse impacts around underwriting and investments and have provided a high degree of confidence in both companies' approach.

In addition, included within these reports is further insight into the companies' approaches to GHG emissions within their investment portfolios, which has been a particular topic of engagement for the Fund in recent years. Travelers' TCFD report (p16, 17, 18 and 19) discusses in detail how climate considerations are incorporated and managed within the investment process and have had an impact on investment decisions already. Travelers' management specifically notes that "explicitly incorporating ESG factors into our fundamental credit analysis process has resulted in a higher level of awareness and focus on these factors". In addition, management are now reporting GHG emissions associated with their investment portfolio as shown on p34 to 36 of their TCFD report.

In respect of Chubb, the company has further to go in this respect and the Fund continues to engage on this topic; this year, the Investment Manager voted against ISS and the shareholder resolutions.

The Investment Manager believes that the engagement around these shareholder resolutions has significantly enhanced the broader understanding of the Property & Casualty industry in a net zero future, particularly in the US. This has reduced the risk of principal adverse impacts from underwriting, investment and insurance activities along with compliance regulatory factors, given an increase in focus by the SEC and other such regulators where the Fund has exposure with respect to these factors.

The Investment Manager continued to engage with management teams over the review period with respect to how they could improve the implementation of the UNEP FI Principles (United Nations Environment Programme Finance Initiative) into the underwriting and investment process. It was promising to see Fund companies, in aggregate, increase the score arising from responsible investments and underwriting. The Investment Manager is cognisant of the important role it provides in encouraging holdings to meet UN PRI standards.

Fossil Fuels - During the 2023/2024 financial year proxy voting season, the Investment Manager, instead of voting against Berkshire Hathaway management as in prior years, voted with management on a resolution asking for disclosure of a report disclosing GHG emissions from underwriting, insuring, and investment activities (against the resolution and ISS). This was because of a significant change in tone by management at the previous two shareholder meetings and improvement in disclosures in key subsidiaries, particularly in Berkshire Hathaway Energy, which continues to make progress on its net zero transition. In addition, while the Fund wishes to see further disclosure and improvement in relation

to GHG emissions for the group, currently there is no agreed methodology for underwriting emissions of underwriting and insuring activities in a manner which is useful to investors.

It is notable that Berkshire Hathaway's subsidiary disclosures have improved over recent years as have management's engagement and commentary at the annual meeting with shareholders around the transition to net zero carbon emissions. It is also important to note that the majority of fossil fuel emissions at Berkshire Hathaway arise within Berkshire Hathaway Energy, which is a leading company operating in support of the net zero carbon emissions transition and the largest owner of regulated renewable energy assets in the United States. Berkshire Hathaway is a small holding with a holding weight of around 1% of the Fund. This is discussed in more detail below.

Social and employee matters - The Investment Manager monitored PAI compliance with respect to social and employee matters through the UN SDG Matrix which aggregated the impact of both revenue specific and corporate entity analysis. This monitoring included the Investment Manager's quarterly ESG Scoring for investee companies, where controversies related to social and employee matters are assessed in Governance "red flags", and also evaluated as a separate line item that feeds into the Fund's directional ESG assessment of a company (i.e. whether the company's ESG performance is improving or deteriorating). Fund companies have been showing reassuring progress across social factors over time, particularly around human capital and development, diversity, engagement and culture. The Investment Manager then assessed compliance with social and employee matters against UN SDG 16 "Peace and Justice".

Board Gender Diversity - The Investment Manager continued to engage with investee company management teams in support of the objectives of the 30% Club, a campaign group of global business chairpersons and CEOs aiming to increase gender diversity across the insurance industry. Finding qualified and appropriately experienced board members in the insurance industry can often be a challenge given the specific skills required, so the Investment Manager is pragmatic in its approach to meeting this objective in the near term, but expects to see positive directional momentum over time. The majority of companies have now achieved these 30% Club thresholds and that is reflected in an improvement in scoring year on year. There are number of companies that do not currently meet this threshold and engagement is ongoing; in some cases, this can depend on the timeline for director election and a pool of suitable candidates, but over time the Investment Manager expects to see investee companies' progress continue beyond 30%.

An investee company's performance on this PAI feeds into the UN SDG matrix through the Corporate ESG Assessment element of the Investment Manager's ESG scoring process, where it is then reflected within the UN SDG matrix as a strong impact, in terms of UN SDG 5 General Equality and positive UN SDG 10 Inequality, provided there is no PAI negative impact assessed. There was an improvement in Board Diversity scores across the Fund during the reference period (in contrast to no improvement in the prior year). Scores in this category remain lower in comparison to other categories of Governance scoring highlighting that we expect to see continual progress over time and that the 30% Club is only the first initial step on this journey.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

Governance – Red Flags - The Fund also monitors principal adverse impacts at Fund companies using an assessment of the number of red flags, which signal potential adverse impacts at portfolio holdings. Four companies totalling <10% of AUM experienced a deterioration (increase) in the number of red flags during the year, of which two of which were subsequently sold, Aon and James River. The remaining companies include Direct Line, which had been a focus given the departure of the previous CEO and internal issues with respect to underwriting, reserving and solvency that emerged at the company in 2023. The business went into 2024 on more solid ground, and a new CEO joined with a mission-driven focus on improving the performance. Direct Line was subsequently the target of a second takeover bid from Aviva, which was recommended in December, highlighting the short-term nature of the concerns and limited effect on the Fund's principal adverse impact assessment.

Markel, in addition, has seen a moderate increase in red flags in the year, and in response to this the Fund has engaged with the company on numerous occasions. The Fund is satisfied that there are no material long term principal adverse impacts in respect of its business and will continue to engage in 2025.

Indicator ³		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁴
GHG Emissions (TCO2e)	Scope 1	3,428.6	98.2%	1,540.2	100.0%	122.6%
	Scope 2	1,900.3	98.2%	2,098.6	100.0%	-9.5%
	Scope 1 & 2	5,328.8	98.2%	3,644.6	100.0%	46.2%
Carbon Footprint (TCO2e/ €m Invested)	Scope 1 & 2	1.8	98.2%	1.2	100.0%	48.1%
GHG Intensity (TCO2e / €m Revenue)	Scope 1 & 2	3.5	98.2%	2.0	100.0%	74.4%
Weighted Average Carbon Intensity (TCO2e / €m Revenue)	Scope 1 & 2	4.1	98.2%	2.5	100.0%	64.4%
Female Board Representation (%)		31.6	98.8%	36.0	100.0%	-12.4%

³ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity and board gender diversity data as of 31 December 2024. Benchmark: MSCI Daily TR World Net Insurance Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €3,066.2 m as of 31 December 2024. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁴ The figures shown demonstrate the difference in performance of the Fund and the Benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What were the top investments of this financial product?

Largest investments	Sector	% Assets	Country
Arch Capital	Financials	9.0	Bermuda
RenaissanceRe Holdings	Financials	9.0	Bermuda
Chubb	Financials	6.4	Bermuda
Marsh McLennan	Financials	5.8	United States
WR Berkley	Financials	5.4	United States
Essent Group	Financials	4.6	United States
Fairfax Financial Holdings	Financials	4.4	Canada
Beazley	Financials	4.3	United Kingdom
Everest Group	Financials	4.2	Bermuda
Markel	Financials	4.2	United States
Progressive Corp	Financials	4.2	United States
Lancashire Holdings	Financials	4.0	United Kingdom
The Travelers Cos	Financials	3.9	United States
Intact Financial Corp	Financials	3.7	Canada
Reinsurance Group of America	Financials	3.2	United States

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2024

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What was the asset allocation?

The Fund invests primarily in securities of insurance-related companies worldwide. The Investment Manager uses the Global Insurance ESG Framework and the Global Insurance UN SDG Matrix to assess the environmental and/or social characteristics ("E/S") of each investee company.

100% of the companies the Fund invests in were assessed in this way.

During the reference period, an average of 98.2% of the Fund's investments were positively aligned with one or more UN SDGs using the Global Insurance UN SDG Matrix⁵.

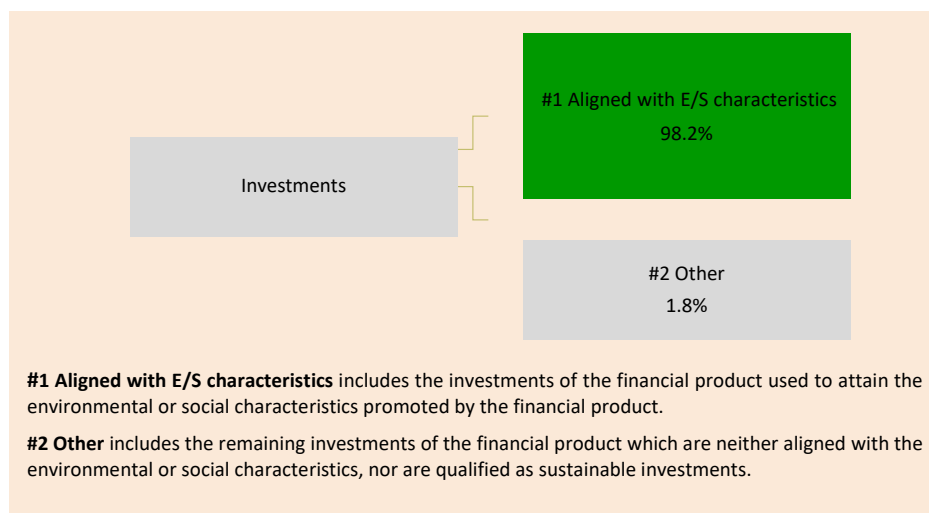

Asset allocation describes the share of investments in specific assets.

⁵ This figure shows the portfolio weighted average of the Fund's assets, including cash, that are aligned with the Fund's characteristics. Alignment is calculated with reference to the underwriting mix of each investee company and at least one aspect of that investee company's underwriting mix having a positive, strong or high impact on one or more of the UN SDGs. The average is calculated as a simple average of the portfolio weighted average of the alignment of the Fund's assets as at the end of each calendar quarter (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● In which economic sectors were the investments made?

Economic Sectors	% Assets ⁶
Financials	99.1
Cash and Cash equivalents	0.9

The Fund owns Berkshire Hathaway, a position weight of around 1% of the Fund. Berkshire Hathaway Energy comprises 7% of the 9 month 2024 revenues (2% of earnings) of Berkshire Hathaway, representing around 8 basis points of Fund exposure to this business. Of the 8 basis points around 50% comes from non-renewable sources representing around 4 basis points of Fund exposure to fossil fuels.

The Investment Manager believes that Berkshire Hathaway Energy (BHE) is transitioning its business model towards renewable energy at a satisfactory pace. The company is striving for a 50% reduction in CO₂ emissions by 2030 from 2005 levels and to reach net zero greenhouse gas emissions by 2050. Progress continues in 2024, and remains supported by 2023 data (posted annually on Berkshire Hathaway Energy's website) that showed the company had reduced its annual GHG emissions by 35% (including a 50% reduction in emissions intensity) since 2005, which compared to 27% in the prior year.

Warren Buffett noted at the 2024 Shareholder AGM that Berkshire Hathaway has retired the last two coal units in Nevada as part of its ambition to retire an additional 16 coal generation units between 2023 and 2030. In Iowa, its \$3.9bn wind and solar

⁶ This figure shows the percentage of the Fund's assets within each economic sector as at 31 December 2024, excluding cash.

project has resulted in more clean energy generation than demand from Berkshire Hathaway Energy's customers annual usage. Berkshire Hathaway Energy will continue to make investments to manage the intermittency from solar and wind power as these projects are rolled out across the US and in energy transmission capabilities. As previously noted, c. 45% of BHE 2023 power generation was from renewables (compared to c. 20% for the industry), up from 10% in 2005. In addition to this substantial progress already, Berkshire Hathaway Energy continues to make key investments in wind, solar and other low carbon generation units that will help to further facilitate the transition more broadly, particularly in its investments in US energy transmission capability.

Underwriting impacts to fossil fuel businesses are de minimis at a portfolio level at <1% of premiums.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy⁷?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

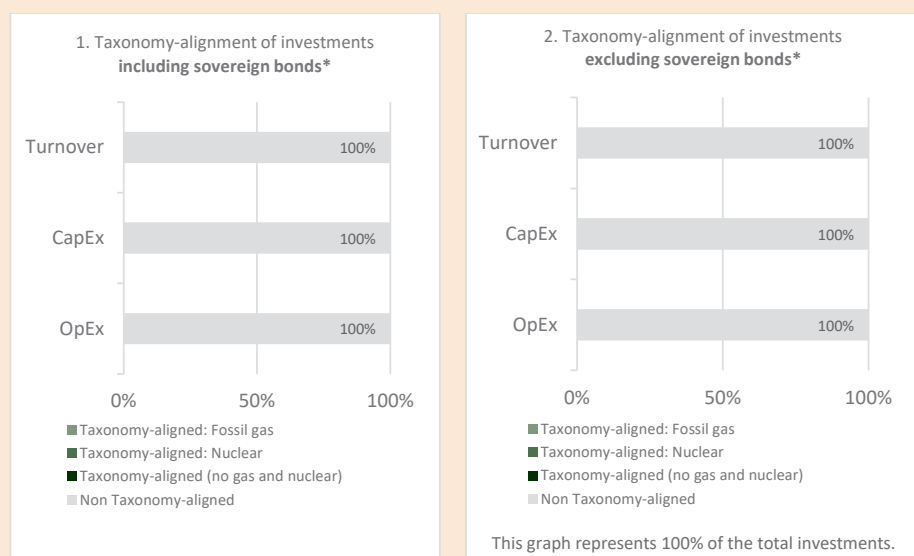

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 1.8% of the Fund’s investments were identified as #2 Other in the above diagram and were held in cash for liquidity purposes in line with the Fund’s investment policy. There are no minimum environmental or social safeguards applicable to these investments.⁸

Any equity holdings not positively aligned with the promoted E/S characteristics were held in order to meet the Fund’s investment objective of achieving long term capital appreciation. As highlighted within the investment strategy, the Investment Manager carries out a broader assessment of the ESG risks and opportunities relevant to all of the companies held by the Fund.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Manager has consistently applied the methodology of the Global Insurance UN SDG Matrix to the Fund holdings and portfolio composition during the reference period.

Although the Investment Manager assesses the ESG performance of investee companies against the Investment Manager’s view of best-in-class performance in the relevant categories, there is an expectation that these best-in-class standards will rise over time and the standards will become more stringent accordingly. Investee companies that show little or no improvement over the reference period will therefore be scored lower.

The Investment Manager continued to engage with holdings specifically around GHG emissions disclosures and incorporation of climate related factors into catastrophe risk modelling as appropriate based on business mix.

Where investee companies demonstrated deteriorating performance on ESG metrics that the Investment Manager believed were relevant, the Investment Manager engaged with those investee companies to encourage improved ESG performance, thereby promoting continued alignment with the UN SDGs.

Five investee companies demonstrated modestly deteriorating performance against the Fund’s increasingly stringent ESG criteria during the year. As noted previously, two of these companies were sold in the year (Aon, sold in January 2024, and James River, sold in June 2024). One, Direct Line Group, was acquired by Aviva (not held) with a recommended offer in December but remained a holding at year end. The final two companies are Markel, as previously disclosed, and First American. The Fund continues to engage with Markel but the company continues to be marked down given the limited willingness to entertain additional disclosure and issues with prior management within the insurance business. At First American, the company suffered a second cyber attack

⁸ This shows the percentage of the Fund’s assets, including cash, on a portfolio weighted basis, not aligned with the Fund’s characteristics. The average is calculated as a simple average of the percentage of the Fund’s assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Insurance Fund continued

which had a material impact on its earnings, which has raised questions with respect to the governance at the company.

In terms of favourable trends in the portfolio, we have seen improvements in environmental and social factors manifest at Travelers, given its enhanced disclosures. These trends are also followed by Beazley, Marsh McLennan and Brown and Brown.

Action, by way of the sales of the holdings in James River and Proassurance, contributed to the Fund's ability to meet its social and environmental objectives, given these companies were scored in the bottom quartile of all Fund companies.

Investee companies showed a similar positive trend in the Investment Manager's ESG scores to the prior year, with no areas of material concern noted despite the increased stringency of the Manager's scoring process.

From an environmental perspective, the Investment Manager continued to engage with investee companies around incorporation of the UNEP FI Principles for Sustainable Insurance into underwriting processes and investment portfolios. Responsible investment practices showed meaningful increases compared to the prior year, with reference to the Investment Manager's ESG scores in this area during the review period. This was due to improvements in approach at a number of investee companies, some of which were supported by Fund engagements, in particular at Chubb. In addition, it was positive to see improvement in the approach of companies towards responsible underwriting, with scores improving by a similar degree of magnitude.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● **How does the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● **How did this financial product perform compared with the reference benchmark?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● **How did this financial product perform compared with the broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Global Technology Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Global Technology Fund (the “Fund”)

Legal entity identifier: 5493000F1H21ODJZM634

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies within the technology investment universe with products and services which contributed to:

- (i) Access to technology and communications infrastructure
- (ii) Increasing business productivity and efficiency
- (iii) Empowering individuals

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

For the avoidance of doubt, the Fund did invest in companies within the technology investment universe the products and services of which did not, in part or in whole, contribute to the promoted characteristics outlined above. Such companies included, by way of example, those operating in emerging areas of technology which lacked well-defined use cases or for which their contribution to the promoted characteristics was uncertain, but in respect of which the Investment Manager was of the view that an investment offered attractive investment opportunities for the Fund and aligned with the broader ESG elements of the Fund's investment process.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The Investment Manager measured the attainment of the Fund's promoted characteristics by analysing the proportion of its investee companies' current or estimated future revenues derived from products, services or activities aligned with each promoted characteristic.

Characteristics	Quarterly Revenue Alignment ¹				Average ²
	<u>Mar-24</u>	<u>Jun-24</u>	<u>Sep-24</u>	<u>Dec-24</u>	
Access to technology and communications infrastructure	55.5%	58.7%	55.9%	51.9%	55.5%
Increasing business productivity and efficiency	19.8%	18.0%	18.4%	21.4%	19.4%
Empowering individuals	14.9%	14.4%	16.0%	17.0%	15.6%
Total	90.2%	91.1%	90.3%	90.3%	90.5%

Over the reference period, a weighted average of 90.5% of the current or estimated future revenues of the companies in which the Fund had invested were derived from products, services or activities aligned with the three promoted characteristics³.

¹ The table shows the portfolio weighted average current or estimated future revenue alignment of the Fund, including cash, with each of the characteristics at the end of each quarter. The total alignment of the Fund with the characteristics is calculated by summing the alignment figures for each of the characteristics.

² This shows the simple average of the Fund's quarterly portfolio current or estimated future revenue alignment with each of the characteristics. The total alignment of the Fund with the characteristics is calculated by summing the alignment figures for each of the characteristics.

³ The Fund's alignment with its promoted characteristics is calculated by taking the weighted average alignment of the Fund with its characteristics at the end of each calendar quarter (31 March 2024, 30 June 2024, 30 September 2024 and 31 December 2024) and calculating the simple average of the quarterly alignment figures.

The breakdown of revenue alignment per promoted characteristic is highlighted in the table below:

Characteristics	Quarterly Revenue Alignment ⁴	
	2022 Average	2023 Average
Access to technology and communications infrastructure	39.9%	44.6%
Increasing business productivity and efficiency	27.3%	25.0%
Empowering individuals	20.7%	20.0%
Total	87.9%	89.6%

There were no investments that failed the exclusion criteria for the whole reference period.

● **...and compared to previous periods?**

The breakdown of revenue alignment per promoted characteristic for the previous years is highlighted in the table below:

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

⁴ The table shows the portfolio weighted average current or estimated future revenue alignment of the Fund, including cash, with each of the characteristics at the end of each quarter. The total alignment of the Fund with the characteristics is calculated by summing the alignment figures for each of the characteristics. This excluded the first quarter of the calendar year as the Fund was not classified as an Article 8 Fund at this time.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

- How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

- Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The greenhouse gas (“GHG”) emissions, GHG Footprint and GHG Intensity of investee companies were evaluated using data provided by a third party data provider and investee companies’ own disclosures in their Annual Report, 10K or 20F, Sustainability or ESG Reports, particularly applicable for those companies where third party provided data was not available. Scope 1 and Scope 2 GHG emissions were considered for every investee company and Scope 3 GHG emissions for the most material emitters were considered. Scope 3 emissions account for approximately 85% of the aggregate Scope 1, 2, and 3 GHG emissions made by investee companies.

Investee companies’ emissions data were then referenced against the Fund’s benchmark (Dow Jones Global Technology Index), the MSCI ACWI index and the sector in which the company operates to identify those operating within High Impact Climate Sectors as defined by the Institutional Investors Group on Climate Change.

When these GHG emissions were flagged as being above a certain threshold or the investee company was in a High Impact Climate Sector, the Investment Manager assessed whether the company has an emissions mitigation or reduction strategy in place, whether that strategy or target is independently verified by a reputable third party such as the Science Based Targets initiative (SBTi), whether the company’s emission trend is on track

with the reduction target, or whether the company's emissions level and growth was a function of selling a product or service which may help their underlying clients in carbon reduction efforts.

This latter point took on greater relevance last year as the Investment Manager continues to invest in companies involved in Artificial Intelligence (AI) infrastructure, applications, and the related supply chain. Some AI companies are experiencing rising emissions, primarily due to rapid business growth, even if their carbon intensity per unit of revenue is broadly on a declining trend. During the year, an in-depth project was undertaken to evaluate the environmental costs and benefits of this AI investment by specific reference to the ensuing growth emissions between now and the end of this decade from AI investment, compared to the eventual impact on emissions from potential commercial applications of AI in areas such as commercial building heating, ventilation, and air conditioning (HVAC) systems or the manufacturing process.

This project, while not providing definitive answers, suggested that a focus solely on emissions growth might give an incomplete view about the desirability of investment in AI-exposed companies from an environmental perspective. The initial conclusions suggest that investment in AI, especially datacentre infrastructure and associated electrical power consumption, might add approximately +1% to the level of global emissions by 2030. However, research also indicated that the commercial application of AI may lead to eventual emissions reductions from 2030 onwards by at least this amount. This conclusion aligns with separate research published by PWC⁵ and Boston Consulting⁶. The impact of AI on the environment could then be considered at least neutral, and possibly a positive, at least taking emissions as the closest proxy.

Efforts were made by the Investment Manager to evaluate this thesis by reaching out to various companies for real examples or case studies. An ESG-specific call was held with Tesla following a claim made in their 2023 Impact Report⁷ that the application of AI in HVAC systems in their factories in Nevada, Texas, California, and Berlin could reduce energy use. This call informed us that the energy use did decline by 5-10% when AI control of HVAC systems was implemented. A call was also held with Atlas Copco on the same subject. While not held within the Fund, this company has installed AI software in recent iterations of air compression management systems and confirmed in the call that broadly two-thirds of the energy efficiency improvement compared to previous versions can be accounted for by the use of AI.

Research from Schneider Electric⁸ also suggests that a -9% reduction in electrical power use has been experienced over a 4-year period when AI-powered HVAC systems have been deployed in a sample of 87 educational buildings across Sweden.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

While the number of case studies is at this stage very small, initial evidence supports the conclusion that emissions reductions from commercial AI use from 2030 onwards may balance the higher emissions emanating from the initial build-out of AI infrastructure and associated power use in datacentres. The consideration of GHG emissions is at least partly undertaken through this lens.

For investee companies that flagged as high emitters and without a high proportion of their revenues being AI-related by way of mitigation, the Investment Manager conducted an additional review. This review seeks to verify the accuracy of any data provided by third parties, checks whether the investee company was intending to set new emissions reduction targets in the near-term and checks whether the investee company had committed to SBTi accreditation in the future or had other mitigation strategies, such as a commitment to close down or dispose of high emission activities.

When the Investment Manager was dissatisfied with the overall mitigation strategy or when the company provided inadequate disclosure of its emissions, and the Investment Manager deemed it necessary, engagement was attempted.

In 2023, as in other years, the Investment Manager engaged with Samsung Electronics. The company provides comprehensive disclosure across every category Scope 1-3, but despite being one of the highest emitting technology companies globally in absolute terms, the company does not have either an internal or external Scope 3 target. This initial engagement had suggested a Scope 3 target would be forthcoming but when one was not produced, the Investment Manager followed up with a second engagement in 2024. Following this second call, the Investment Manager concluded that the position and challenges remain the same for Samsung namely that a) while Scope 3 targets and SBTi accreditation are often discussed internally, a commitment may not be possible for some time as an SBTi target requires immediate reductions in emissions which Samsung claim may not be compatible with a growing business, b) Samsung believes that SBTi protocols are not sufficiently developed for semiconductor specific companies and, as such, they are engaging with other chip companies through the Semiconductor Climate Symposium⁹, including Intel, which in time may develop industry specific science-based protocols for setting targets, and c) Samsung continues to be constrained by the fact only approximately 10% of South Korean power generation comes from renewables (the lowest proportion of any OECD country). This is likely to only rise to 30% by 2030, which in itself will not facilitate Net Zero objectives within Samsung's domestic operations by 2030. The growth of the business and the constraint of operating in a country with low renewable power generation means that meaningful emissions reductions are unlikely to happen until the end of this decade at the earliest. The only mitigation is that Samsung has made a public commitment to Net Zero across the entire value chain by 2050.

The Investment Manager held an engagement with Doordash, which among other issues, covered the lack of comprehensive emission disclosure. While Scope 1+2 disclosure is provided, there is no Scope 3 disclosure or target. The company provided feedback that some investors, perhaps US-based, do not require this information and as such, the company would not provide comprehensive disclosure until or unless required by

⁹ <https://www.semi.org/en/industry-groups/semiconductor-climate-consortium>

Californian and European law. This call was perhaps an early indication of evolving attitudes in the US, where some observers believe the new administration might encourage some companies to slow down or even reverse various ESG initiatives, including those involving emissions disclosure, target setting and performance.

Calls were also held with Pure Storage (PSTG), as their Net Zero objectives omit Scope 3 completely, even though Scope 3 accounts for 99% of all their emissions, and Teradata (TDC), which had promised but then failed to achieve SBTi validation of its emission targets.

The Investment Manager considered the Fund's exposure to companies active in the fossil fuel sector by evaluating each investee company's revenue breakdown using third party data and the Investment Manager's knowledge of each company. The Fund has an exclusion policy of not investing in companies that derive more than 5% of their revenues from thermal coal production and oil and gas exploration and production. The Investment Manager confirms that 0% of the Fund's investee companies had revenues attributed to the fossil fuel sector.

Using data provided either by third parties or the company's own disclosures, the Investment Manager considered the gender diversity of each investee company's board, noting that the thresholds applied by the Investment Manager differ, depending on the company and its location, to reflect regional norms on board diversity.

When an investee company's proportion of female directors fell below a certain threshold, the Investment Manager conducted an additional review of the circumstances to verify that the data was correct, and whether the investee company had a strategy or objective to improve board gender diversity. As a direct result of these reviews which included recommendations, at the AGMs of Harmonic Drive Systems and Alphabet, the Investment Manager voted against certain directors with the intention of increasing female board representation.

Every investee company is assessed for severe controversies and allegations of United Nations Global Compact (UNGC) norms violations using data and information provided by third parties, such as MSCI ESG Manager, or independently sourced by the Investment Manager. When deemed material, the issue is investigated further with an in-depth review of the specific circumstances. This review will make recommendations for further action which may include monitoring, voting, engagement and in extremis, divestment or exclusion. Several companies owned by the Fund appeared on MSCI's UNGC norms screen such as Amazon, Apple, Meta Platforms, Robinhood Markets, Tencent and Tesla and were reviewed accordingly.

As last year, investee companies Amazon, Apple and Tesla in particular, were flagged as being potential indirect beneficiaries of the illegal use of Uyghur labour within their Chinese supply chains following reports by the Australian Strategic Policy Institute (ASPI) in 2019, and Sheffield Hallam University in 2023. All the allegations in respect of these companies were again evaluated and documented by the Investment Manager. Having engaged with Tesla on this issue in 2023, no further engagement was deemed necessary as the Investment Manager has concluded that Tesla is already an industry leader in terms of supply chain audit and compliance. Last year's SFDR Annual Report for the Fund also

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

concluded that no engagement was required with Amazon and Apple on the issue of supply chain labour and human rights. The Investment Manager believes that no new relevant information became known during the reporting period to impact this conclusion. In time, the Investment Manager believes that these companies will fall off MSCI's norms screen, at least for the allegations of the illegal use of Uyghur labour.

Consistent with this conclusion on Apple, a shareholder resolution at the 2024 AGM had requested a '*Report on the Congruency of Company's Privacy and Human Rights Policies with its Actions.*' ISS advised a vote against this resolution, concluding that Apple appears to provide shareholders with sufficient disclosure to assess its management of risks related to its operations in high-risk markets and to have policies and oversight mechanisms in place that seem to address human rights concerns raised by the proponent. In agreement, the Investment Manager voted against the resolution.

Conversely, Amazon is also flagged by MSCI on its UNGC Watch List for potentially infringing employees' freedom of association and the effective recognition of the right to collective bargaining. The Investment Manager continues to monitor this issue and accordingly, at Amazon's 2024 AGM where a shareholder proposed a resolution requesting that Amazon '*Commission a Third-Party Assessment on Company's Commitment to Freedom of Association and Collective Bargaining*', the Investment Manager voted in favour, in line with ISS, but against management recommendation.

The Investment Manager continues to review various controversies involving Meta Platforms, and where appropriate, will exercise voting powers accordingly. For example, at the 2024 AGM, against management recommendation, the Investment Manager voted for shareholder resolutions requesting a) disclosure on how the company measures and tracks metrics related to child safety on the company's platforms, b) greater transparency on the company's direct and indirect climate lobbying, and c) a report on the Human Rights Impact Assessment of Targeted Advertising.

The Investment Manager will continue to engage with investee companies as and when new material controversies or potential norms-related violations arise.

The Investment Manager has excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ¹⁰		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ¹¹
GHG Emissions (TCO2e)	Scope 1	7,537.8	93.7%	5,569.7	99.3%	35.3%
	Scope 2	33,895.6	93.7%	21,649.9	99.3%	56.6%
	Scope 1 & 2	41,433.3	93.7%	27,223.1	99.3%	52.2%
Carbon Footprint (TCO2e/ €m Invested)	Scope 1 & 2	6.4	93.7%	4.1	99.3%	58.5%

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2024

¹⁰ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity and board gender diversity data as of 31 December 2024. Benchmark: Dow Jones Global Technology Net Total Return Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €6,711m as of 31 December 2024. The Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

¹¹ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

Global Technology Fund continued

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What was the asset allocation?

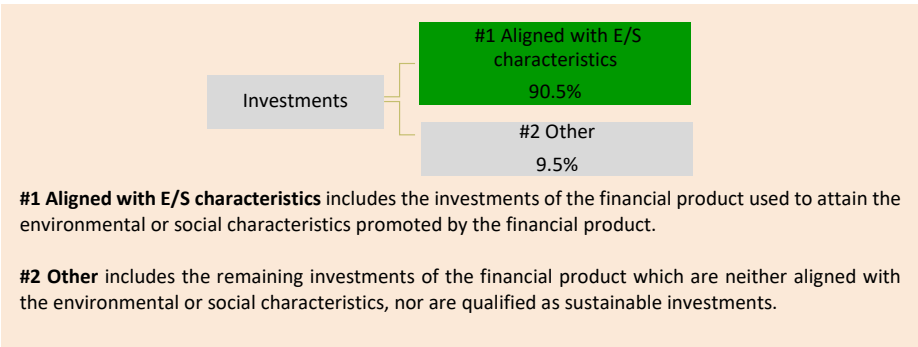

The Fund primarily seeks to invest in companies within the technology investment universe. The Investment Manager assessed 100% of the companies in the Fund for revenue alignment towards the Fund’s promoted environmental and/or social characteristics (“E/S”) characteristics.

During the reference period, an average of 90.5% of current or estimated future revenues of the companies invested in by the Fund were aligned with the environmental or social characteristics promoted by the Fund.¹²

The Fund’s investments identified as #2 Other in the below diagram were held in equity securities that did not contribute towards the Fund’s promoted characteristics, in cash or in derivative instruments.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.).

Asset allocation describes the share of investments in specific assets.

¹² The Fund’s alignment with its promoted characteristics is calculated by taking the weighted average alignment of the Fund with its characteristics at the end of each calendar quarter (31 March 2024, 30 June 2024, 30 September 2024 and 31 December 2024) and calculating the simple average of the quarterly alignment figures.

● **In which economic sectors were the investments made?**

Economic Sectors	% Assets ¹³
Information Technology	67.6
Communication Services	17.6
Consumer Discretionary	6.0
Cash and Cash equivalents	3.9
Industrials	2.2
Financials	1.7
Health Care	0.7
Real Estate	0.5

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

0% of the Fund's investee companies had exposure to fossil fuel related activities.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹⁴?

Yes:

In fossil gas

In nuclear energy

No

¹³ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024

¹⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

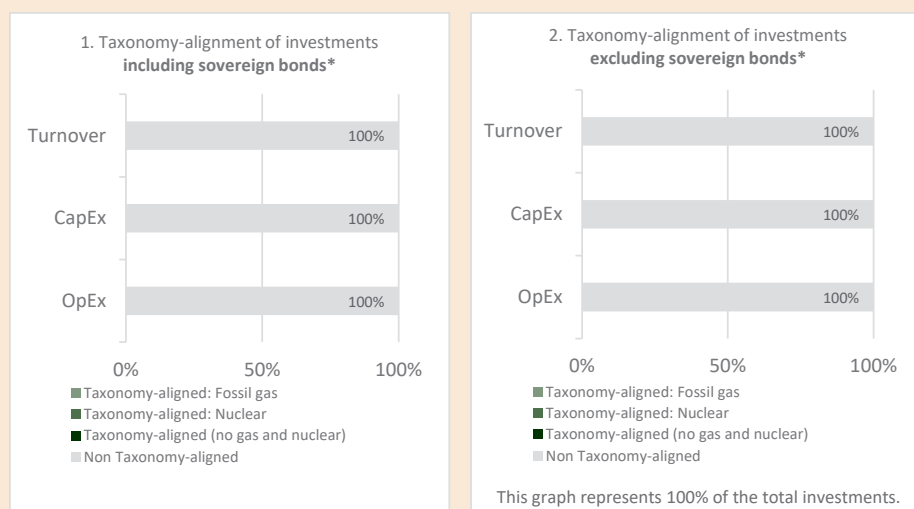

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

An average of 9.5% of the Fund’s investments were classified as #2 Other over the reference period¹⁵. These investments include the portion of equity investments whose current or estimated future revenue, in part or on the whole, did not align with the promoted characteristics and cash and derivative instruments.

All equity investments are subject to the Fund’s exclusion criteria. There are no minimum environmental or social safeguards applicable to cash or derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In accordance with the investment strategy for the Fund, the Investment Manager assessed every investee company for the company’s current or estimated future revenue alignment with the three promoted characteristics described above. Every prospective investment was also assessed against the Fund’s exclusion criteria.

Every existing holding is assessed on the same basis and its alignment is monitored on an ongoing basis.

This internal review ensured that a minimum threshold of at least 50% of the Fund’s assets were always invested in companies aligned with the promoted characteristics and ensures compliance with the Fund’s exclusion parameters.

The following are examples of stocks held over the review period that demonstrate alignment with the Fund’s promoted characteristics:

NVIDIA

NVIDIA is modernizing the world’s trillion-dollar data centre industry. By accelerating workloads with NVIDIA GPUs operating in parallel, NVIDIA exponentially increase throughput while driving down the total energy used to complete a task. Accelerated computing took workloads that previously required tens of thousands of general-purpose servers, consuming 10X to 20X more cost and energy and compressed it into something incredibly dense. NVIDIA’s chips are also applied to save energy; researchers use AI to discover safer, better-performing batteries that use fewer natural resources. Microsoft and Pacific Northwest National Laboratory used NVIDIA accelerated computing to screen over 32 million potential materials in approximately one week. They identified 18 promising candidates, including a new electrolyte material containing lithium and sodium ions. This new material reduces lithium usage by up to 70% compared to conventional batteries. By teaching an AI to recognize and predict weather patterns, NVIDIA’s digital twin of our planet can predict atmospheric pressure, temperature, precipitation, wind speed and direction, and humidity at an unprecedented scale of two kilometres. Once the Earth-2

¹⁵ This figure shows the average percentage of the Fund’s assets, including cash, on a portfolio weighted basis, categorised as ‘Other’ investments. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted ‘Other’ investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Global Technology Fund continued

model is trained, it can predict weather 1,000X faster and 3,000X more energy-efficiently than traditional physics models.

Cloudflare

Cloudflare is making the Internet more accessible by improving reliability around the world. The Cloudflare network is expanding digital access globally by delivering Internet content more efficiently. The network operates within approximately 50 milliseconds of about 95% of the Internet-connected population. It is also engineering privacy protections into the basic infrastructure of the Internet and building quantum-resistant cryptography to help secure the future of privacy. Cloudflare also support the security of election system infrastructure by providing security, performance, and reliability to eligible state and local government websites, in addition to political campaign websites, for free.

Spotify

Spotify's mission is to unlock the potential of human creativity by giving a million creative artists the opportunity to live off their art and billions of fans the opportunity to enjoy and be inspired by it. Spotify transformed music listening when it launched in 2008, moving the music industry from a "transaction-based" experience of buying and owning audio content to an "access-based" model allowing users to stream on demand. The company move into podcasting brought innovation and a new generation of listeners to the medium, and in 2022 they entered the next audio market primed for growth with the addition of audiobooks. Spotify helps make it easier to discover new audio that listeners love through personalized discovery at scale, around the world, as well as helping artists and creators get discovered, grow their audience, and create content.

Monitoring of any ESG issues and controversies was undertaken during the reference period and is ongoing.

At every AGM or shareholder meeting, the Investment Manager reviewed the resolutions being proposed and documented when it voted the Fund's shares against the company's management and the reason for the vote.

On several occasions, and again against management recommendation, the Investment Manager voted in favour of improved ESG disclosure or practices that might enhance the Fund's environmental and/or social characteristics. For example, at the Apple AGM, votes were cast in favour of requesting a Report on Median Gender/Racial Pay Gap and a Report on the Use of Artificial Intelligence. At the Amazon AGM, votes were cast in favour of a Report on Median and Adjusted Gender/Racial Pay Gaps, a Report on the Impact of Climate Change Strategy Consistent with Just Transition Guidelines, and in favour of commissioning a Third-Party Audit on Working Conditions. At the Tesla AGM, votes were cast in favour of a Report on Harassment and Discrimination Prevention Efforts and in favour of Tesla adopting a Non-Interference Policy Respecting Freedom of Association.

Not specifically connected to environmental and/or social characteristics of the Fund, but in the interests of enhancing good governance, voting powers were often exercised against the recommendation of management. As an example, the Investment Manager voted against management recommendations on advisory executive compensation resolutions at the AGMs of Amazon, Broadcom, Cloudflare, Marvell Technology, Nutanix, Oracle, Palo

Alto Pure Storage, Salesforce, Shopify and Workday. In addition, and not an exhaustive list, votes were cast against the re-election of several directors in an effort to improve board independence, to reduce average board tenure, to help eradicate share structures with differential voting rights, or to improve other governance issues such as classified boards when deemed inappropriate. Examples of AGMs where votes were cast against certain directors include Alphabet, ARM Holdings, Harmonic Drive Systems, KLA, Meta, Nvidia, Oracle, Pure Storage, Nvidia and Tesla.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

Healthcare Blue Chip Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Healthcare Blue Chip Fund (the “Fund”)

Legal entity identifier: 549300ERXLM8TOFA2G98

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<div><input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> Yes</div> <div><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%<div><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div> <div><input type="checkbox"/> It made sustainable investments with a social objective: ____%</div>	<div><input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> No</div> <div><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 96.1% of sustainable investments<div><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><input checked="" type="checkbox"/> with a social objective</div></div> <div><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</div>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

- The Fund invested in companies within the healthcare investment universe that contributed to the:
- (i) Improvement of clinical outcomes for patients through innovation,
 - (ii) Improvement of the affordability and accessibility of healthcare services; and
 - (iii) Improvement of the efficiency of the delivery of healthcare services.

The Fund commits to a minimum proportion of 50% of its investments as sustainable investments, defined as aligning to one of the three characteristics listed above.

By investing in these companies, the Investment Manager believes that the Fund contributed to Goal 3 of the United Nations Sustainable Development Goals (SDGs) which is to “ensure healthy lives and promote well-being for all at all ages”. The UN SDGs are part of the United Nation’s 2030 Agenda for Sustainable Development, adopted by all UN member states in 2015, and comprise 17 goals which aim to tackle the world’s approach to the environmental and social matters. The full list of the 17 UN SDGs can be found at <https://sdgs.un.org/goals>.

For the avoidance of doubt, the Fund may, and did over the period, invest in companies within the healthcare investment universe whose products and services do not, in part or in whole, contribute to the promoted characteristics outlined above where the Investment Manager was of the opinion that such an investment nevertheless offers an attractive investment opportunity for the Fund.

● ***How did the sustainability indicators perform?***

The Investment Manager monitors the Fund’s attainment of its characteristics by evaluating the portfolio’s weighted exposure to each of the three promoted characteristics listed above.

The Investment Manager’s calculation of the Fund’s portfolio weighted exposure will take account of both revenue and operational expenditure exposure to the characteristics for commercial stage companies (i.e. companies which have taken their product or service to market, commercialised their product or service or which receive revenues from already commercialised products or services) and of actual or proposed operational expenditure exposure to the characteristics for precommercial stage companies (i.e. companies which are still in the development stage conducting pre-clinical testing and clinical trials of their product). The Investment Manager will also account for instances in which an investee company’s revenue and/or operational expenditure is exposed to more than one of the social characteristics described above.

Over the reference period a weighted average of 94.1% of the Fund’s assets were invested in investee companies with current revenues or R&D expenditures derived from products, services or activities aligned with the three promoted characteristics (which is calculated by taking an average of the quarters ended March, June, September and December 2024)¹.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

¹ This shows the percentage revenue or operational expenditure exposure of the Fund’s assets, including cash, on a portfolio weighted basis, to the Fund’s characteristics. The average is calculated as a simple average of the Fund’s percentage exposure as at 31 March, 30 June, 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue to calculate an investee company’s alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company’s alignment with the characteristics.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

Apart from minor fluctuations quarter to quarter, the alignment to each of the distinct characteristics of sustainable healthcare delivery has remained relatively constant over the period.

	31-Mar-24	30-Jun-24	30-Sep-24	31-Dec-24	Average ²
Characteristic 1 Improve clinical outcomes for patients through innovation	77.4%	78.5%	72.6%	79.4%	77.0%
Characteristic 2 Improve the affordability and accessibility of healthcare services	8.7%	9.0%	11.9%	10.5%	10.0%
Characteristic 3 Improve the efficiency of the delivery of healthcare services	6.8%	8.1%	8.7%	4.9%	7.1%
Overall Alignment	92.9%	95.6%	93.3%	94.8%	94.1%

As of the date of this report, 0% of the Fund's investments failed the exclusion criteria.

● ...and compared to previous periods?

	2022 Average	2023 Average
Characteristic 1 Improve clinical outcomes for patients through innovation	68.2%	83.3%
Characteristic 2 Improve the affordability and accessibility of healthcare services	10.5%	1.5%
Characteristic 3 Improve the efficiency of the delivery of healthcare services	11.3%	5.5%
Overall Alignment	90.0%	92.5%

The overall alignment to the sustainable characteristics remained consistent throughout the year and comparable to the average from the previous period. Apart from minor fluctuations quarter to quarter, the alignment to each of the distinct characteristics of sustainable healthcare delivery has remained relatively constant over the period. Average alignment to each of the characteristics varies slightly from the 2023 averages; this was the natural impact of changes in stock selection, rather than a deliberate change in alignment to each of the characteristics.

² The Fund's average exposure to each characteristic is calculated by taking a simple average of the quarterly exposures. The average exposure to each characteristic on a quarterly basis is calculated by taking a portfolio weighted average of the exposure.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Fund commits to having a minimum proportion of 50% of its investments in sustainable investments. The Investment Manager considered a company eligible as a sustainable investment if the company contributed to the objectives:

- (i) Improvement of clinical outcomes for patients through innovation;
- (ii) Improvement of the affordability and accessibility of healthcare services; and
- (iii) Improvement of the efficiency of the delivery of healthcare services.

Companies held by the Fund were aligned to the three sustainability objectives in a variety of ways. Examples of how the Investment Manager established an investee company's contribution to a sustainable investment objective are provided below.

The majority of revenues derived from drug discovery and the research and sale of new drugs, along with diagnostic tools and services, were positively aligned with the characteristic of improving clinical outcomes, as were over the counter products. Activities aligned to improving the affordability and accessibility of healthcare included the manufacture of generics and the provision of health insurance services. Revenues from hospitals and other healthcare facilities were aligned with the improving the efficiency of delivery of healthcare services objective.

Over the reference period, an average of 96.1% of the Fund's investments were classified as sustainable investments.³

Although on average the revenue alignment of the healthcare companies held during the reference period to the sustainability objectives was high, some sources of revenue were not considered to be aligned, such as medical aesthetics and non-healthcare business segments, such as electronics manufacturing. While these revenue sources were not considered sustainable, a company that generated some revenues from activities not aligned to the three sustainability objectives outlined above was still eligible to be considered as a sustainable investment overall if the company also had business segments that were positively aligned to the sustainability characteristics. Also, certain larger cap investments in the Fund generated revenues from separate business areas, which aligned with separate sustainable investment characteristics.

Most companies within the portfolio showed strong alignment to a single characteristic. For example, Novo Nordisk is an investee company which is fully

³ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were are classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

aligned with improving clinical outcomes for patients through innovation. 100% of the company's revenues are generated from innovative medicines addressing a variety of therapeutic needs. Aside from its obesity drug, which has been a key theme for investors recently, it also has innovative medicines in other therapeutic areas such as haemophilia, diabetes, growth disorders and hormone replacement therapies. Extensive research and development are required to produce novel drugs with proven therapeutic benefits and acceptable safety profiles in order to obtain approval and take to the market. The company is thus deemed to be fully aligned with improving clinical outcomes for patients through innovation. Patients previously struggling with weight loss via conventional lifestyle changes can now benefit from up to c.15% weight loss from treatment with Wegovy.

The nature of the drug industry means that when a patent expires, companies involved in producing generic versions of these medicines can contribute to significantly improving the affordability of treatments. Sandoz is an example of a company where the Investment Manager deems 100% of revenues align with improving the affordability and accessibility of healthcare delivery. The company helps to alleviate the financial strain of healthcare by manufacturing high-quality generic and biosimilar medicines, which are more affordable than their branded alternatives. Operating across many countries, Sandoz ensures essential medicines are available to diverse populations, including low and middle-income markets and underserved regions. Sandoz works with governments, healthcare organisations and non-profit groups to expand access, and to implement a patient access program offering financial assistance or free medicines to patients facing financial hardship.

UnitedHealth, a managed care organisation, is considered to be aligned with multiple characteristics. 76% of its revenues are from services related to healthcare benefit plans. Healthcare insurance is vital in enabling patients access to care, therefore revenues are considered to be aligned with the sustainable investment characteristic of improving affordability and accessibility of healthcare. The remainder of the company's revenues (c.24%) are deemed to be derived from other healthcare services within their Optum business segment. This includes physician networks, pharmacy benefit management and software/data analytics services, all of which contribute to the characteristic of improving the efficiency of the delivery of healthcare.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm ("DNSH"), assessed each company primarily using third party data, to assess whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as sustainable investments by the Investment Manager. In addition, the Fund employs an

exclusion policy that excludes investment altogether in companies that operate in sectors that are deemed to have a negative impact on the environment or society.

The Investment Manager used research from third party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over whether an investee company should be viewed as having significantly harmed an environmental or social objective.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of Annex 1 Level 2 of the Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator, to assess harm caused by the company, and determined the relevance and materiality of the principal adverse impact indicator to the company using industry expertise and any data available.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with these global norms, and where necessary, conducted further due diligence to determine compliance with these norms.

To ensure that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, the Fund excluded companies deemed to have severe violations of the UNGC principles on human rights, environmental protection, labour rights and anti-corruption, based on third party controversy research related to these global norms.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives. Where material, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero. Exposure to companies active in the fossil fuel sector were considered by the Investment Manager through the exclusion policy in place.

Furthermore, companies in the healthcare sector have substantially lower energy and carbon intensities than market averages, so carbon emissions are on average much lower than most other industries. To illustrate this, the Scope 1 and 2 carbon emissions footprint of the MSCI ACWI Health Care Index in TCO2e/EVIC AUM measured less than 10% of the MSCI ACWI Index as a whole as at 31 December 2024⁴.

Despite low industry emissions, GHG emissions of investee companies were evaluated using either company reported data, or where this was not disclosed, through third party estimates based on business segment.

This emissions data was referenced against the Fund’s benchmark and the healthcare sub-sector in which the investee company operates to identify those in sectors having a high impact on the climate. When these emissions were flagged as being above a certain threshold, the Investment Manager assessed whether the company had a carbon strategy in place, and the sophistication of that strategy, for example, whether the company measures and reports its carbon emissions, whether the company has a mitigation or reduction strategy in place, whether that strategy or target is independently verified by a reputable third party such as the Science Based Targets Initiative (SBTi), and whether the company’s historic emission trend is on track with the reduction target.

⁴ Source: MSCI Climate Change Metric: GHG emissions footprint. Where 100% coverage of a metric is not available, the index figures are estimated as if 100% coverage had been achieved and calculated on the basis of existing data coverage figures.

The Investment Manager engaged with companies on environmental matters, including carbon emissions. Stevanato, a life sciences tools and services company, is not evaluated by MSCI, the third party rating agency the Investment Manager uses as a guide, and the company's website disclosures were not very detailed or specific. Therefore, the Investment Manager hosted a call with Stevanato's sustainability lead to gain a greater understanding of its ESG policies, including environmental initiatives and targets, and to encourage greater disclosure on these topics. The company detailed its specific scope 1-2 emissions reduction target and current progress towards meeting this. Additionally, it plans to define an operational plan to reduce scope 3 emissions. Environmental areas discussed included energy efficiency actions, green energy procurement, technology innovation and waste recovery. The Investment Manager is comfortable that the necessary targets are being set, with actions being taken to meet them.

The Investment Manager considered the standards of the United Nations Global Compact (UNGC), and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises (OECD). If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company.

Every investee company was assessed for severe controversies and allegations of UNGC norms violations using data and information provided by third party data providers or independently sourced by the Investment Manager. When deemed material, the issue was investigated further with an in-depth review of the specific circumstances. During the reference period, no companies were assessed to have failed the UNGC standards.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

The Investment Manager interacted with an investee company, Bruker, via email regarding business activities related to weapons services. Although the company is not involved in producing or supporting weapons, a small portion of the business is involved in weapon detection. The company confirmed that this business contributes to less than 5% of company revenues, confirming that it remains below the threshold for exclusion.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

Indicator		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative %
GHG Emissions (TCO ₂ e)	Scope 1	339.9	95.1%	349.4	99.7%	-2.7%

H Lundbeck A/S	Health Care	2.90	Denmark
Stevanato Group SpA	Health Care	2.68	Italy

⁵ The top 15 largest holdings as at 31 December 2024.

What was the proportion of sustainability-related investments?

● *What was the asset allocation?*

Asset allocation describes the share of investments in specific assets.

The Fund primarily seeks to invest in companies within the healthcare investment universe. The Investment Manager assessed 100% of the companies in the Fund for revenue alignment towards the Fund's promoted social characteristics.

During the reference period, a weighted average of 94.1% of the revenue or operational expenditure of the companies invested in were exposed to products, services or activities aligned with one or more of the three promoted characteristics⁶.

While the Fund does not have sustainable investing as its objective, the Fund invested 96.1% of its investments in sustainable investments with a social objective. Investments were considered sustainable if they were deemed by the Investment Manager to contribute to the sustainable investment objectives identified above and passed the Do No Significant Harm test and followed good governance practices.⁷

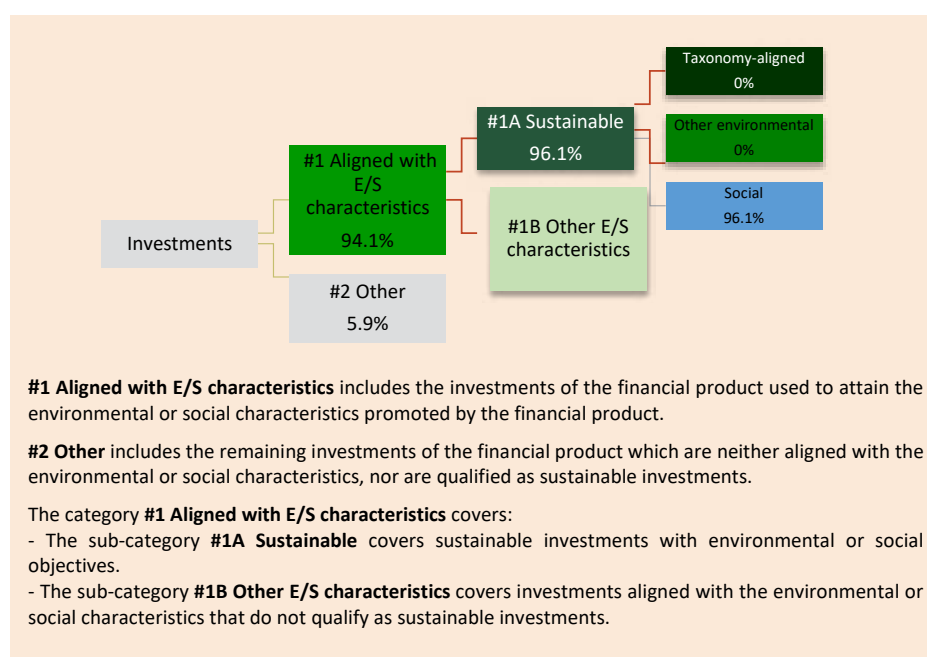

⁶ This shows the percentage revenue or operational expenditure exposure of the Fund's assets, including cash, on a portfolio weighted basis, to the Fund's characteristics. The average is calculated as a simple average of the Fund's percentage exposure as at 31 March, 30 June, 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company's alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company's alignment with the characteristics.

⁷ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were are classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)⁸

In which economic sectors were the investments made?

Economic Sectors	% Assets ⁹
Health Care	97.8
Materials	2.2

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities as defined as such by the EU Taxonomy Regulation.

⁸ Please note that the sustainable investments figure may be greater than the E/S characteristics alignment figure. This is due to the E/S characteristics alignment figure being the percentage revenue or operational expenditure exposure of the Fund's assets, including cash, on a portfolio weighted basis, to the Fund's characteristics, whereas the full weight of a portfolio holding is considered a sustainable investment if it meets the criteria to be considered a sustainable investment.

⁹ This figure shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

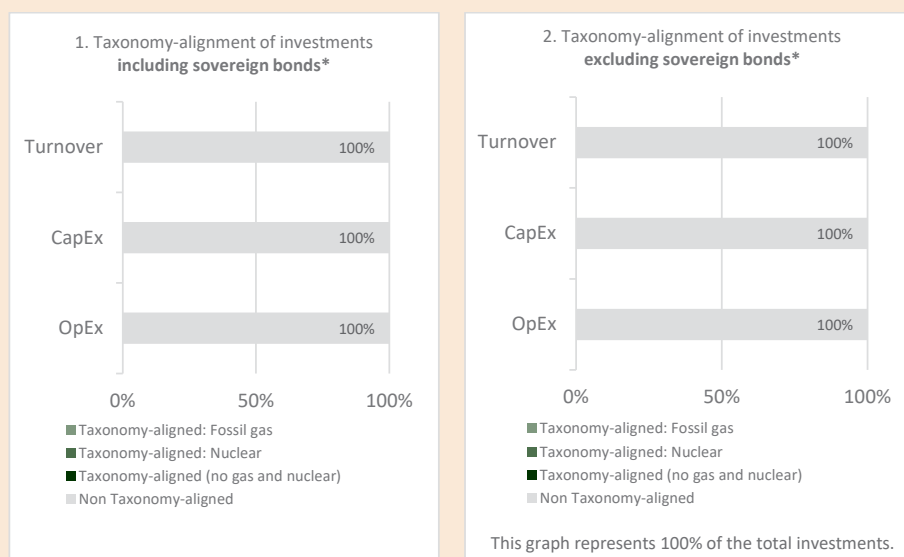

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁰?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

¹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in Sustainable Investments with an environmental objective, including environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund's Sustainable Investments are aligned to the Fund's three characteristics and are considered by the Investment Manager to be socially sustainable investments.

While the Fund does not have sustainable investment as its objective, the Fund invested 96.1% of its investments in sustainable investments with a social objective. Investments were considered sustainable if they met the revenue threshold contributing to the sustainability objectives, passed the Do No Significant Harm test and followed good governance practices.¹¹

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund's investments identified as #2 Other in the above diagram were made up of portions of investment revenues not aligned with the promoted characteristics of the Fund and cash. During the reference period, an average of 5.9% of the Fund's investments were not aligned with the promoted characteristics of the Fund.¹²

All equity investments are subject to minimum environmental or social safeguards through the fund's exclusion criteria.

The Fund held cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these holdings.

¹¹ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were are classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹² This shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, not aligned with the Fund's characteristics. The average is calculated as a simple average of the percentage of the Fund's assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Manager's methodology for assessing whether an investment contributes to a sustainable investment objective is harmonised with the assessment of its social characteristics.

Detailed examples of how companies held during the reference period were assessed and aligned with the Fund's characteristics and the sustainable investment objectives contributed to by the Fund are given above in the section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Using their sector expertise, company specific knowledge and often, engagement with company representatives, the Investment Manager assesses every prospective investee company for its revenue alignment or, where the company is at pre-revenue stage, operational expenditure alignment, with the characteristics and sustainable investment objectives described above.

Every prospective investment was also assessed against the Fund's exclusion criteria. Every investee company was assessed on the same basis and its alignment was monitored on an ongoing basis.

As well as pre-trade exclusion checks, a quarterly oversight review ensured compliance with the Fund's exclusion parameters.

At AGMs or shareholder meetings, the Investment Manager reviewed the resolutions and documented its voting decisions, as well as any resultant engagements with investee companies.

Stewardship activities, including voting, interactions with companies and follow up engagements emanating from this assessment were documented in a central database. Monitoring of any ESG issues and controversies was undertaken during the reference period and is ongoing.

The Investment Manager interacted with companies on matters such as the gender pay gap and compensation as part of the annual proxy voting process. For one company, the third party shareholder proxy voting advisor, ISS, recommended voting against company management on a shareholder proposal requesting the company to report unadjusted median gender and racial pay gaps. The Investment Manager concurred with the third party recommendation, voting for the proposal, concluding that the reporting will enable evaluation of how effectively the company is implementing their policies and advancing opportunities for women and racial/ethnic minorities. Moreover, it will aid in managing the risks associated with heightened public scrutiny on pay equality.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Blue Chip Fund continued

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Healthcare Discovery Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Healthcare Discovery Fund (the “Fund”)

Legal entity identifier: 549300ENXX4FV2HTT122

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes**

☐ It made **sustainable investments with an environmental objective**: ____%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ ☒ **No**

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 95.5% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies within the healthcare investment universe that contributed to the:

- Improvement of clinical outcomes for patients through innovation,
- Improvement of the affordability and accessibility of healthcare services; and
- Improvement of the efficiency of the delivery of healthcare services.

The Fund commits to a minimum proportion of 50% of its investments as sustainable investments, defined as aligning to one of the three characteristics listed above.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Discovery Fund continued

By investing in these companies, the Investment Manager believes that the Fund contributes to Goal 3 of the United Nations Sustainable Development Goals (SDGs) which is to “ensure healthy lives and promote well-being for all at all ages”. The UN SDGs are part of the United Nation’s 2030 Agenda for Sustainable Development, adopted by all UN member states in 2015, and comprise 17 goals which aim to tackle the world’s approach to the environmental and social matters. The full list of the 17 UN SDGs can be found at <https://sdgs.un.org/goals>.

For the avoidance of doubt, the Fund may, and did over the period, invest in companies within the healthcare investment universe whose products and services do not, in part or in whole, contribute to the promoted characteristics outlined above where the Investment Manager is of the opinion that such an investment nevertheless offers an attractive investment opportunity for the Fund.

● ***How did the sustainability indicators perform?***

The Investment Manager monitors the Fund’s attainment of its characteristics by evaluating the portfolio’s weighted exposure to each of the three promoted characteristics listed above.

The Investment Manager’s calculation of the Fund’s portfolio weighted exposure will take account of both revenue and operational expenditure exposure to the characteristics for commercial stage companies (i.e. companies which have taken their product or service to market, commercialised their product or service or which receive revenues from already commercialised products or services) and of actual or proposed operational expenditure exposure to the characteristics for precommercial stage companies (i.e. companies which are still in the development stage conducting pre-clinical testing and clinical trials of their product). The Investment Manager will also account for instances in which an investee company’s revenue and/or operational expenditure is exposed to more than one of the social characteristics described above.

Over the reference period, a weighted average of 89.4% of the Fund’s assets were invested in investee companies with current revenues or R&D expenditures derived from products, services or activities aligned with the three promoted characteristics. (which is calculated by taking an average of the quarters ended March, June, September and December 2024)¹.

¹ This shows the percentage revenue or operational expenditure exposure of the Fund’s assets, including cash, on a portfolio weighted basis, to the Fund’s characteristics. The average is calculated as a simple average of the Fund’s percentage exposure as at 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue to calculate an investee company’s alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company’s alignment with the characteristics.

	31-Mar-24	30-Jun-24	30-Sep-24	31-Dec-24	Average ²
Characteristic 1 Improve clinical outcomes for patients through innovation	65.2%	60.9%	59.2%	63.4%	62.2%
Characteristic 2 Improve the affordability and accessibility of healthcare services	6.1%	9.2%	9.5%	10.0%	8.7%
Characteristic 3 Improve the efficiency of the delivery of healthcare services	17.8%	19.6%	20.9%	16.0%	18.6%
Overall Alignment	89.0%	89.7%	89.6%	89.4%	89.5%

As of the date of this report, 0% of the Fund's investments failed the exclusion criteria.

● ...and compared to previous periods?

	2023 Average
Characteristic 1 Improve clinical outcomes for patients through innovation	63.2%
Characteristic 2 Improve the affordability and accessibility of healthcare services	4.3%
Characteristic 3 Improve the efficiency of the delivery of healthcare services	22.3%
Overall Alignment	89.8%

Apart from minor fluctuations quarter to quarter, the alignment to each of the distinct characteristics of sustainable healthcare delivery has remained relatively constant over the period. The exception would be Characteristic 2, which has seen average alignment roughly double; this is as a natural impact of changes in stock selection.

Please note, the Fund was approved by the Central Bank of Ireland as an Article 8 SFDR fund on 26 August 2023 and therefore the 2023 average is a simple average of alignment exposure on a quarterly basis, consisting of 30 September and 31 December.

² In calculating the average, the Investment Manager may use operational expenditure rather than revenue to calculate an investee company's alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company's alignment with the characteristics.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Discovery Fund continued

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Fund commits to a minimum proportion of 50% of its investments as sustainable investments. The Investment Manager considered a company eligible as a sustainable investment if the company contributed to the objectives:

- (i) Improvement of clinical outcomes for patients through innovation;
- (ii) Improvement of the affordability and accessibility of healthcare services; and
- (iii) Improvement of the efficiency of the delivery of healthcare services.

Companies held by the Fund were aligned to the three sustainability objectives in a variety of ways. Examples of how the Investment Manager established an investee company's contribution to a sustainable investment objective are provided below.

Investee companies were deemed to contribute to improving clinical outcomes where they derived a sufficient portion of their revenues from, or committed a sufficient proportion of their operational expenditure to, activities such as drug discovery, the research and sale of new drugs, the sale of over the counter products and the sale of diagnostic tools and services.

Investee companies were deemed to contribute to improving the affordability and accessibility of healthcare where they derived a sufficient portion of their revenues from, or committed a sufficient proportion of their operational expenditure to, activities such as the manufacture of generic medicines and the provision of health insurance services.

Investee companies that derived a sufficient portion of revenues from activities such as hospitals and other healthcare facilities were aligned with the improving the efficiency of delivery of healthcare services objective.

Once an investee company's alignment with a sustainable investment objective has been established, the Investment Manager will then also confirm that it passes the Do No Significant Harm test referred to in the section below and that it followed good governance practices.

Over the reference period, an average of 95.5% of the Fund's investments were classified as sustainable investments.³

Although on average the revenue alignment of healthcare companies held during the reference period to the sustainability objectives was high, some sources of revenue were not considered to be aligned, such as medical aesthetics and non-healthcare business segments, such as cosmetics. While these revenue sources were not considered sustainable, a company that generated some revenues from

³ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were are classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

activities not aligned to the three sustainability objectives outlined above were still eligible to be considered as a sustainable investment overall if the company also had business segments that were positively aligned to the sustainability objectives.

Examples of investments in the Fund and their alignment to the three sustainability objectives outlined above are detailed below.

A biopharmaceutical company, Inmed Pharmaceuticals, focusing on the commercialisation and development of new medicines for the treatment of respiratory diseases such as bronchiectasis and rare pulmonary disorders where standard of care today is lacking or leaves much room for improvement. While a revenue generating company, it also invests approximately 60% of its operating expenses on R&D, which, alongside encouraging clinical trial results to date, the Investment Manager deems as aligned with the improving clinical outcomes through innovation characteristic.

Outside of innovation, other investment companies mostly align to a single sustainability characteristic, for instance improving the affordability and accessibility of healthcare. As an example, HealthEquity is a healthcare services company that provides and administers US healthcare savings accounts (HSAs) which enable individuals to save, invest and spend dedicated healthcare dollars in a manner that best suits their financial and insurance coverage resources as well as the means to reduce out of pocket costs and improve accessibility. These HSAs also offer a potential for a triple layer of tax benefits for the individual.

Improving the efficiency of healthcare delivery is the third area of alignment with a sustainable characteristic. Privia Healthcare, a healthcare services company, offers a physician-focused business platform designed to reduce unnecessary costs, achieve better outcomes and improve patient health and provider well-being. The care model enables the delivery of high-quality care for patients in an efficient and effective manner while enabling the practitioner to focus at the top of their license as opposed to being encumbered with the business administration of running a successful healthcare practise. Privia partners with payers, health systems and employers to better align reimbursement with the quality, outcomes and performance delivered.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm (“DNSH”), assessed each company primarily using third party data, to assess whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as sustainable investments by the Investment Manager. In addition, the Fund employs an exclusion policy that excludes investment altogether in companies that operate in sectors that are deemed to have a negative impact on the environment or society.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Discovery Fund continued

The Investment Manager used the research of third party providers to provide deeper insights into a company's compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over whether an investee company had significantly harmed an environmental or social objective.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of Annex 1 Level 2 of the Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with these global norms, and where necessary, conducted further due diligence to determine compliance with these norms.

To ensure that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, the Fund excluded companies deemed to have severe violations of the UNGC principles on human rights, environmental protection, labour rights and anti-corruption, and third-party controversy research related to these global norms.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives. Where material, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero.

The Investment Manager considered investee companies’ exposure to the fossil fuel sector by evaluating their revenue breakdown using third party data. In line with the Fund’s stated exclusions, 0% of the Fund’s investee companies had revenues attributed to the fossil fuel sector over the reporting period.

Furthermore, companies in the healthcare sector have substantially lower energy and carbon intensities than market averages, so carbon emissions are on average much lower than most other industries. To illustrate this, the Scope 1 and 2 carbon emissions footprint of the MSCI ACWI Health Care Index in TCO2e/EVIC AUM measured less than 10% of the MSCI ACWI Index as a whole as at 31 December 2024⁴.

Despite low industry emissions, GHG emissions of investee companies were evaluated using either company reported data, or where this was not disclosed, through third party estimates based on business segment.

This emissions data was referenced against the Fund’s benchmark and the healthcare sub-sector in which the investee company operates to identify those in sectors having a high impact on the climate. When these emissions were flagged as being above a certain threshold, the Investment Manager assessed whether the company had a carbon strategy in place, and the sophistication of that strategy, for example, whether the company measures and reports its carbon emissions, whether the company has a mitigation or reduction strategy in place, whether that strategy or target is independently verified by a

⁴ Source: MSCI Climate Change Metric: GHG emissions footprint. Where 100% coverage of a metric is not available, the index figures are estimated as if 100% coverage had been achieved and calculated on the basis of existing data coverage figures.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Discovery Fund continued

reputable third party such as the Science Based Targets Initiative (SBTi), and whether the company's historic emission trend is on track with the reduction target.

The Investment Manager considered the board gender diversity and excessive CEO pay ratio of investee companies, and where it deemed appropriate, used its tools of active ownership to encourage better practices.

The Investment Manager utilised voting powers to enact change at Masimo, a medical equipment company. A position in Masimo was initiated in 2024. Prior to this, Politan Capital Management (9% shareholder) ran a proxy contest at the 2023 AGM, aiming to replace two of the five board members. The contest evidenced the key reasoning as a lack of accountability to shareholders, with the company operating more like a private business, showing disregard for shareholder interests. Both dissident nominees were successfully elected.

Post AGM, the Investment Manager initiated a small fund position on the basis of valuation of the base business alone, and potential for further scope for improved governance. However, instead of using last year's proxy contest as a chance to break with the past, the board continued to bow to CEO and Chairman Joe Kiani, including by allowing him to exercise inappropriate influence over the refreshment process. Thus, Masimo continued to display a dangerous lack of accountability to shareholders that required additional board change to rectify.

Politan ran a further contest at the 2024 meeting, seeking an additional two seats on the six-member board. One of the targeted directors was founder, board chair, and CEO Joe Kiani. We cast our votes as advised in favour of the dissident prevailing in what had become an overly complicated voting process. The dissident was successful and now holds four of the six seats. Upon the removal of the prior directors, including CEO and Chairman Joe Kiani, and the reassertion of the business priorities and reorganisation as advertised, the Investment Manager increased the Fund position.

In addition, the Investment Manager recently directly engaged with the new management team during a year end healthcare conference where the reorganisation across the company remains on track and shares have responded accordingly. As such, position size was increased and progress on governance continues to be monitored, as well as other key aspects of the business, including sustainability.

The Investment Manager considered the standards of the United Nations Global Compact (UNGC), and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises (OECD). If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company.

Every investee company was assessed for severe controversies and allegations of UNGC norms violations using data and information provided by third party data providers or independently sourced by the Investment Manager. When deemed material, the issue was investigated further with an in-depth review of the specific circumstances. During the reference period, no companies were assessed to have failed the UNGC standards.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

The Investment Manager interacted with an investee company, Bruker, via email regarding business activities related to weapons services. Although the company is not involved in producing or supporting weapons, a small portion of the business is involved in weapon detection. The company confirmed that this business contributes to less than 5% of company revenues, confirming that it remains below the threshold for exclusion.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

⁵ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity, and board gender diversity data as of 31 December 2024. Benchmark: MSCI AC World Daily Total Return Net Health Care Index. The allocated emissions of investee companies are calculated using the companies Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €5.8m as of 31 December 2024. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note these figures are provided for comparative and illustrative purposes only and should not be relied upon. The figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁶ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

⁷ The top 15 largest holdings as at 31 December 2024.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

● What was the asset allocation?

The Fund primarily seeks to invest in companies within the healthcare investment universe. The Investment Manager assessed 100% of the companies in the Fund for revenue alignment towards the Fund's promoted social characteristics.

During the reference period, a weighted average of 89.5% of the revenue or operational expenditure of the companies invested in were exposed to products, services or activities aligned with one or more of the three promoted characteristics⁸.

While the Fund does not have sustainable investing as its objective, the Fund invested 95.5% of its investments in sustainable investments with a social objective. Investments were considered sustainable if they were deemed by the Investment Manager to contribute to the sustainable investment objectives identified above and passed the Do No Significant Harm test and followed good governance practices.⁹

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. '#1 Aligned with E/S characteristics' etc.)¹⁰

⁸ This shows the percentage revenue or operational expenditure exposure of the Fund's assets, including cash, on a portfolio weighted basis, to the Fund's characteristics. The average is calculated as a simple average of the Fund's percentage exposure as at 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company's alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company's alignment with the characteristics.

⁹ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹⁰ Please note that the sustainable investments figure may be greater than the E/S characteristics alignment figure. This is due to the E/S characteristics alignment figure being the percentage revenue or operational expenditure exposure of the Fund's assets, including cash, on a portfolio weighted basis, to the Fund's characteristics, whereas the full weight of a portfolio holding is considered a sustainable investment if it meets the criteria to be considered a sustainable investment.

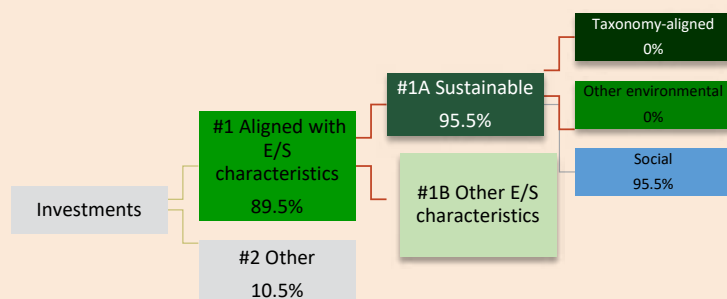

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Discovery Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Economic Sectors	% Assets ¹¹
Health Care	98.6
Cash and Cash equivalents	1.4

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities under the EU Taxonomy Regulation.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹²?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

¹¹ This figure shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

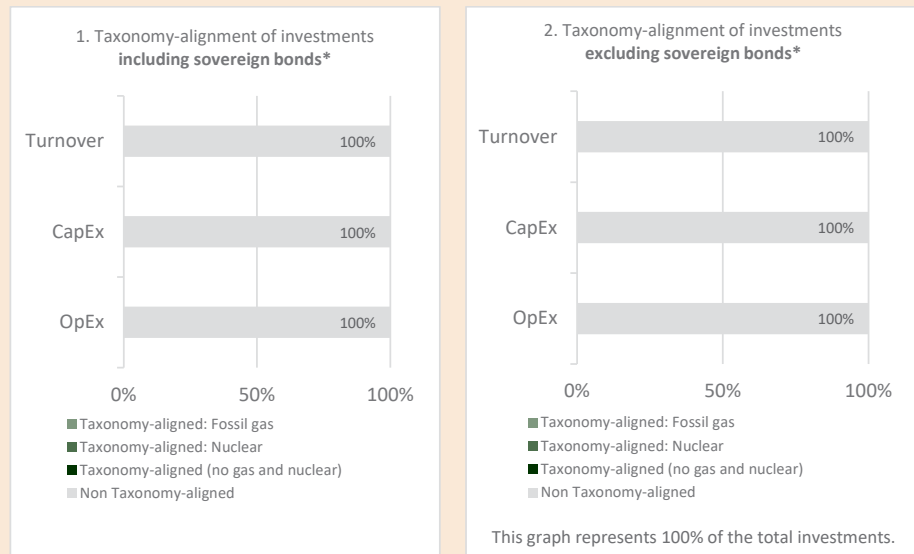

No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in sustainable investments with an environmental objective, including environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Discovery Fund continued

What was the share of socially sustainable investments?

The Fund's sustainable investments are aligned to the Fund's three characteristics and are considered by the Investment Manager to be socially Sustainable Investments.

While the Fund does not have sustainable investments as its objective, the Fund invested 95.5% of its investments in sustainable investments with a social objective. Investments were considered sustainable if they met the revenue threshold contributing to the sustainability objectives and passed the Do No Significant Harm test and followed good governance practices.¹³

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund's investments identified as #2 Other in the above diagram were made up of portions of revenues or expenditure of companies the Fund had invested in that were not aligned with the promoted characteristics of the Fund and cash held for liquidity purposes. During the reference period, an average of 10.5% of investments were not aligned with the promoted characteristics of the Fund.¹⁴

All equity investments are subject to minimum environmental or social safeguards through the Fund's exclusion criteria.

The Fund held cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these holdings.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Manager's methodology for assessing whether an investment contributes to a sustainable investment objective is harmonised with the assessment of its social characteristics.

Detailed examples of how companies held during the reference period were assessed and aligned with the Fund's characteristics and the sustainable investment objectives contributed to by the Fund are given above in the section “What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?”.

¹³ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were are classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹⁴ This figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, not aligned with the characteristics promoted by the Fund. The average is calculated as a simple average of the percentage of the Fund's assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

Using its sector expertise, company specific knowledge and often, engagement with company representatives, the Investment Manager assesses every prospective investee company for its revenue alignment or, where the company is at pre-revenue stage, operational expenditure alignment, with the characteristics and sustainable investment objectives described above.

Every prospective investment was also assessed against the Fund's exclusion criteria. Every investee company was assessed on the same basis and its alignment was monitored on an ongoing basis.

As well as pre-trade exclusion checks, a quarterly oversight review ensured compliance with the Fund's exclusion parameters.

At AGMs or shareholder meetings, the Investment Manager reviewed the resolutions and documented voting intentions and any resultant engagements with investee companies.

Stewardship activities, including voting, interactions with companies, and follow up engagements emanating from this assessment were documented in a central database. Monitoring of any ESG issues and controversies was undertaken during the reference period and is ongoing.

Smaller companies, including healthcare, by nature are typically on a growth journey, which encompasses sustainability. Strong management talent with adequate board support is a key factor of success across the business. As a result, investment opportunities can often be found in turnaround scenarios where new management are brought in and an operational and/or other reorganisation ensues. This may lead to varying and specific circumstances with regard to proxy voting, human capital turnover and other shorter-term circumstances that initially may appear to be moving in the opposite direction as opposed to a longer-term opportunity for improvement and success.

In 2023, the Investment Manager engaged with Standard Bio, a commercial stage life science tools company, upon new management nearing completion of a business refocus and turnaround. Engagement was focused on human capital development. With reference to the prior report, the CFO was integral in these discussions due to the CFO's experience, commitment and role in the company's progress. Post engagement, the company made a significant acquisition, and the recently hired CFO departed shortly after. These factors impacted the investment thesis, resulting in the position being exited.

In September 2024, the Investment Manager initiated an engagement with iRhythm Technologies, a medical device company within the cardiovascular space, following a regulator quality assurance concern for their heart rhythm monitor device. A conference call with company management explained the FDA's concerns which were associated with one specific part of the process involving a cardiac technician check piece and remedial action.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Discovery Fund continued

The company and the regulator were agreed on the main aspects of the quality assurance process. Despite the need for further alignment, management were confident in their relationship with the FDA and expected to reach an agreeable solution.

The engagement provided confidence that the company's internal processes are of high quality, and that the FDA's concerns can be resolved, potentially setting a rhythm device standard for the industry. Further comfort came from regulatory bodies outside of the US not expressing similar concerns over the system and processes, instead noting the high quality and robustness of processes reviewed.

Subsequently, the FDA has signed off on other aspects of a related product range, suggesting a productive working relationship with the regulator, which has provided some comfort that there is a reduced risk of escalation.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How does the reference benchmark differ from a broad market index?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How did this financial product perform compared with the reference benchmark?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How did this financial product perform compared with the broad market index?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Healthcare Opportunities Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Healthcare Opportunities Fund (the “Fund”)

Legal entity identifier: 54930002QS35HXNHZ756

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes**

☐ It made **sustainable investments with an environmental objective**: ____%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ ☒ **No**

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 93.5% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund invested in companies within the healthcare investment universe that contributed to:

- (i) Improvement of clinical outcomes for patients through innovation,
- (ii) Improvement of the affordability and accessibility of healthcare services; and
- (iii) Improvement of the efficiency of the delivery of healthcare services.

The Fund commits to a minimum proportion of 50% of its investments as sustainable investments, defined as aligning to one of the three characteristics listed above.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

By investing in these companies, the Investment Manager believes that the Fund contributes to Goal 3 of the United Nations Sustainable Development Goals (SDGs) which is to “ensure healthy lives and promote well-being for all at all ages”. The UN SDGs are part of the United Nation’s 2030 Agenda for Sustainable Development, adopted by all UN member states in 2015, and comprise 17 goals which aim to tackle the world’s approach to the environmental and social matters. The full list of the 17 UN SDGs can be found at <https://sdgs.un.org/goals>.

For the avoidance of doubt, the Fund may, and did over the period, invest in companies within the healthcare investment universe whose products and services do not, in part or in whole, contribute to the promoted characteristics outlined above where the Investment Manager was of the opinion that such an investment nevertheless offers an attractive investment opportunity for the Fund.

● *How did the sustainability indicators perform?*

The Investment Manager monitors the Fund’s attainment of its characteristics by evaluating the portfolio’s weighted exposure to each of the three promoted characteristics listed above.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Manager’s calculation of the Fund’s portfolio weighted exposure takes account of both revenue and operational expenditure exposure to the characteristics for commercial stage companies (i.e. companies which have taken their product or service to market, commercialised their product or service or which receive revenues from already commercialised products or services) and of actual or proposed operational expenditure exposure to the characteristics for precommercial stage companies (i.e. companies which are still in the development stage conducting pre-clinical testing and clinical trials of their product). The Investment Manager also accounts for instances in which an investee company’s revenue and/or operational expenditure is exposed to more than one of the social characteristics described above.

Over the reference period, a weighted average of 90.0% of the revenue or operational expenditure of the Fund’s assets was exposed to products, services or activities aligned with the three promoted characteristics (which is calculated by taking an average of the quarters ended March, June, September and December 2024)¹.

¹ This shows the percentage revenue or operational expenditure exposure of the Fund’s assets, including cash, on a portfolio weighted basis, to the characteristics promoted by the Fund. The average is calculated as a simple average of the Fund’s percentage exposure as at 31 March, 30 June, 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company’s alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company’s alignment with the characteristics.

	31-Mar-24	30-Jun-24	30-Sep-24	31-Dec-24	Average ²
Characteristic 1 Improve clinical outcomes for patients through innovation	60.5%	63.1%	64.4%	67.6%	63.9%
Characteristic 2 Improve the affordability and accessibility of healthcare services	7.9%	7.0%	14.6%	14.3%	11.0%
Characteristic 3 Improve the efficiency of the delivery of healthcare services	21.5%	18.7%	12.5%	8.1%	15.2%
Overall Alignment	89.9%	88.8%	91.5%	89.9%	90.0%

As of the date of this report, 0% of the Fund's investments failed the exclusion criteria.

● **...and compared to previous periods?**

	2022 Average	2023 Average
Characteristic 1 Improve clinical outcomes for patients through innovation	65.3%	60.0%
Characteristic 2 Improve the affordability and accessibility of healthcare services	8.2%	8.4%
Characteristic 3 Improve the efficiency of the delivery of healthcare services	18.1%	20.2%
Overall Alignment	91.6%	88.6%

The overall alignment to the sustainable characteristics remained consistent throughout the year and comparable to the average from the previous period, with only small variations. Apart from minor fluctuations quarter to quarter, the alignment to Characteristic 1 of sustainable healthcare delivery has remained relatively constant over the period. Alignment to Characteristic 2 increased significantly in the third quarter, whereas alignment to Characteristic 3 decreased each quarter, but most notably in the third quarter too. This was the natural impact of changes in stock selection, rather than a deliberate change in alignment to each of the characteristics.

² The Fund's average exposure to each characteristic is calculated by taking a simple average of the quarterly exposures. The average exposure to each characteristic on a quarterly basis is calculated by taking a portfolio weighted average of the exposure.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Fund commits to a minimum proportion of 50% of its investments as sustainable investments. The Investment Manager considered a company eligible as a sustainable investment if the company contributed to the objectives:

- (i) Improvement of clinical outcomes for patients through innovation;
- (ii) Improvement of the affordability and accessibility of healthcare services; and
- (iii) Improvement of the efficiency of the delivery of healthcare services.

Companies held by the Fund were aligned to the three sustainability objectives in a variety of ways. Examples of how the Investment Manager established an investee company's contribution to a sustainable investment objective are provided below.

Investee companies were deemed to contribute to improving clinical outcomes where they derived a sufficient portion of their revenues from, or committed a sufficient proportion of their operational expenditure to, activities such as drug discovery, the research and sale of new drugs, the sale of over the counter products and the sale of diagnostic tools and services.

Investee companies were deemed to contribute to improving the affordability and accessibility of healthcare where they derived a sufficient portion of their revenues from, or committed a sufficient proportion of their operational expenditure to, activities such as the manufacture of generic medicines and the provision of health insurance services.

Investee companies that derived a sufficient portion of revenues from activities such as hospitals and other healthcare facilities were aligned with improving the efficiency of delivery of healthcare services objective.

Once an investee company's alignment with a sustainable investment objective has been established, the Investment Manager will then also confirm that it passes the Do No Significant Harm test referred to in the section below and that it followed good governance practices.

Over the reference period, an average of 93.5% of the Fund's investments were classified as sustainable investments.³

The Investment Manager noted that although on average the revenue alignment of healthcare companies held during the reference period to the sustainability objectives was high, some sources of revenue were not considered to be aligned

³ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were are classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

with the above sustainable investment objectives, such as medical aesthetics, and non-healthcare business segments, such as electronics manufacturing.

While these revenue sources were not considered sustainable, an investee company that generated revenues from activities not aligned to the three sustainability objectives outlined above was still eligible to be considered as a sustainable investment if the investee company also had business segments that were positively aligned to the sustainability characteristics.

Examples of investee companies and their alignment to the three sustainability objectives outlined above are detailed below.

The majority of companies held by the Fund demonstrated strong alignment to a single characteristic. An investee company which was fully aligned with improving clinical outcomes for patients through innovation is Novo Nordisk. It generates 100% of its revenues from innovative medicines across a variety of therapeutic areas, including obesity, which has been a major theme with investors. Other therapeutic areas addressed by its innovative drugs are haemophilia, diabetes, growth disorders and hormone replacement therapies. To pass the rigorous regulatory processes, novel drugs require significant investment in research and development to prove that the product delivers the intended therapeutic benefit while maintaining an acceptable safety profile. The company is therefore deemed to be aligned with improving clinical outcomes through innovation. Patients who previously faced challenges with weight loss through traditional lifestyle changes can now achieve up to approximately 15% weight loss with treatment using Wegovy.

The nature of the drug industry means that when a patent expires, companies involved in producing generic versions of these medicines can contribute to significantly improving the affordability of treatments. Hikma Pharmaceuticals is an example of a company where the Investment Manager deems 100% of their revenues align with improving the affordability and accessibility of healthcare delivery. The company reduces the financial burden of healthcare by producing high-quality generic and biosimilar medicines, which are more affordable than their brand-name counterparts. The company facilitates accessibility with its global footprint ensuring the distribution of medicines in diverse regions and underserved markets. Collaborations with governments and healthcare organisations help to improve the accessibility of medications, along with a medicine donations programme to support low-income groups, vulnerable people and displaced persons. In 2023, their medicine donations amounted to \$4.9m.

An investee company that is improving the efficiency of healthcare delivery is Max Healthcare, a leading healthcare provider with hospitals located primarily in North India. Through a combination of advanced technology, patient-centred care and streamlined operations, Max Healthcare is improving the efficiency of healthcare delivery. It is implementing Western standard treatments to ensure the best standard of care, optimal outcomes and operational efficiency. By implementing electronic health records, telemedicine, robotic surgery, and data analytics, the

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

organization enhances diagnosis, treatment, and patient access. Although it is a private hospital chain, with patients predominantly paying out of pocket, as part of its social responsibility and commitment to public health, it offers free or subsidised services to certain populations, expanding healthcare access as well.

Some companies held in the portfolio were aligned to more than one characteristic. Uniphar provides an example of a company where alignment is split across characteristics, with 17% alignment to affordability and accessibility of healthcare and 83% alignment to improving the efficiency of healthcare delivery. As a healthcare provider and services company, it generates 16% of its revenues via its Uniphar Pharma division, a business involved in helping provide patients with access to hard-to-source drugs, or those that are not readily available in a given market. The remainder of the business is split between services involved in marketing and distributing drugs/medical devices and retail pharmacies, contributing to the efficiency of healthcare delivery.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager, in compliance with the principle of Do No Significant Harm (“DNSH”), assessed each company, primarily using third party data, to determine whether it had an adverse impact on the environment and society.

Companies with controversies that had very severe adverse impacts on the environment and society were excluded from consideration as sustainable investments by the Investment Manager. In addition, the Fund employs an exclusion policy that excludes investment altogether in companies that operate in sectors that are deemed to have a negative impact on the environment or society.

The Investment Manager used the research from third party providers to provide deeper insights into a company’s compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over whether an investee company should be viewed as having significantly harmed an environmental or social objective.

An example of the due diligence performed by the Investment Manager for DNSH is the monitoring it undertakes on investee companies with respect to controversies and the subsequent engagement it undertakes with investee companies to gain further information on the nature and impact of controversy allegations.

The Investment Manager opened an engagement with Glenmark Life Sciences following the announcement that the Gujarat Pollution Control Board ordered cessation of production activity at its plant in Ankleshwar, Dist. Bharuch, Gujarat and the deposit of a sum of cash with the Environment Damage Compensation. The news prompted an initial interaction with the company, via a call with the CEO and

CFO, with the objective of understanding the issues and to determine any course of action. Management confirmed that pollutants in samples taken from outside of their site's perimeter and as part of a shared drainage system were above recommended levels.

Post-call, the initial ruling was appealed, and manufacturing was reinstated following proof that within the perimeter the company was operating within permitted levels. The Investment Manager remained supportive of investment in improvement CapEx to avoid future recurrences.

The engagement was followed up via email, in which the company confirmed that the root cause was from higher flow from its site, as well as from a neighbouring factory, due to monsoon rains. The company detailed the remedial actions it had taken, and the plans in place to prevent a repeat occurrence. The Investment Manager is comfortable that the necessary corrective measures are being taken to mitigate future risk of a recurrent episode. This engagement will continue through the next monsoon season to confirm that all prevention plans have been implemented and that there are no repeat issues.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts ("PAI") indicators provided in Table 1 (and where applicable, Tables 2 and 3) of Annex 1 Level 2 of the Regulatory Technical Standards.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator, to assess harm caused by the company, and determined the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with these global norms, and where necessary, conducted further due diligence to determine compliance with these norms.

To ensure that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, the Fund excluded companies deemed to have severe

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

violations of the UNGC principles on human rights, environmental protection, labour rights and anti-corruption, based on third party controversy research related to these global norms.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

When assessing a company's impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives. Where material, the Investment Manager assessed the company's carbon reduction policies or targets related to achieving net zero. Exposure to companies active in the fossil fuel sector were considered by the Investment Manager through the exclusion policy in place.

Furthermore, companies in the healthcare sector have substantially lower energy and carbon intensities than market averages, so carbon emissions are on average much lower than most other industries. To illustrate this, the Scope 1 and 2 carbon emissions footprint of the MSCI ACWI Health Care Index in TCO2e/EVIC AUM measured less than 10% of the MSCI ACWI Index as a whole as at 31 December 2024⁴.

Despite low industry emissions, Scope 1 and Scope 2 GHG emissions of investee companies were evaluated using either company reported data, or where this was not disclosed, through third party estimates based on business segment.

This emissions data was also used to collectively consider carbon footprint and GHG intensity of investee companies. Where those emissions were considered material, the

⁴ Source: MSCI Climate Change Metric: GHG emissions footprint. Where 100% coverage of a metric is not available, the index figures are estimated as if 100% coverage had been achieved and calculated on the basis of existing data coverage figures.

Investment Manager engaged with the company to solicit the data. This emissions data was then referenced against the Fund's benchmark and the healthcare sub-sector in which the investee company operates to identify those in sectors having a high impact on the climate. Where these emissions were flagged as being above a certain threshold, the Investment Manager assessed whether the company had a carbon emissions reduction strategy in place, and the sophistication of that strategy. In doing so, the Investment Manager considered whether that strategy or target is independently verified by a reputable third party such as the Science Based Targets initiative (SBTi), whether the company measures and reports its carbon emissions and whether the company's historic emission trend is on track with the reduction target.

The Investment Manager continued to review Max Healthcare's environmental improvements. Despite increases in Scope 1 and 2 emissions in FY24, due to the acquisition of new hospitals, the emissions intensity (emissions upon occupied bed days) decreased by 14.3% year on year. Furthermore, actions have been taken to acquire renewable energy from providers to ensure the facilities receive electricity from renewable sources. The company has also seen a 9% reduction in freshwater consumption, and waste intensity based on occupied beds per day in FY24 was 20% lower year on year.

The Investment Manager considered investee companies' exposure to the fossil fuel sector by evaluating their revenue breakdown using third party data. In line with the Fund's stated exclusions, 0% of the Fund's investee companies had revenues attributed to the fossil fuel sector over the reporting period.

The Investment Manager considered the board gender diversity and excessive CEO pay ratio of investee companies, and where it deemed appropriate, used its tools of active ownership to encourage better practices.

In 2024, the Investment Manager started an engagement with a small-cap pharmaceuticals company, covering some key governance and compensation issues that arose following the company's AGM. The Investment Manager organised a call with the company's Head of Corporate and Financial Communications, and ESG. Disappointment was expressed over the lack of transparency and disclosure surrounding variable compensation and related party transactions, as well as concerns about the independence of non-executive directors. The company was receptive and aware of the issues and was already undergoing discussions on improvements. Following the initial call, the Investment Manager has shared a detailed document with the company highlighting best practices for the areas discussed. While best practice is the aim, the Investment Manager is realistic regarding the engagement, with initial expectations being progress over perfection. The company also sent out an ESG questionnaire to investors to gauge an understanding of the areas of focus for investors relating to ESG, which the Investment Manager participated in. The Investment Manager endeavours to maintain an open dialogue with the company and will organise a further call prior to the next AGM to gain greater insight, discuss any changes they have implemented and to outline expectations.

In its assessments, the Investment Manager considered the standards of the United Nations Global Compact (UNGC), and the Organisation for Economic Co-Operation and Development's (OECD) Guidelines for Multinational Enterprises. If a company was involved in severe controversies or norms violations, the Investment Manager assessed

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

the severity of the incident to decide the appropriate action to take: whether to monitor, enter enhanced engagement, or divest from the company.

Every investee company was assessed for severe controversies and allegations of UNGC norms violations using data and information provided by third party data providers or independently sourced by the Investment Manager. When deemed material, the issue was investigated further with an in-depth review of the specific circumstances. During the reference period, no companies were assessed to have failed the UNGC standards.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ⁵		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁶
GHG Emissions (TCO2e)	Scope 1	3,004.5	91.5%	3,034.2	99.7%	-1.0%
	Scope 2	7,996.4	91.5%	3,664.0	99.7%	118.2%

⁵ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity and board gender diversity data as of 31 December 2024. Benchmark: MSCI AC World Daily Total Return Net Health Care Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €1,736.3m as of 31 December 2024. Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note these figures are provided for comparative and illustrative purposes only and should not be relied upon. The figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁶ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

⁷ The top 15 largest holdings as at 31 December 2024.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

What was the proportion of sustainability-related investments?

● What was the asset allocation?

The Fund primarily seeks to invest in companies within the healthcare investment universe. The Investment Manager assessed 100% of the companies in the Fund for revenue alignment towards the Fund's promoted social characteristics.

During the reference period, a weighted average of 90.0% of the revenue or operational expenditure of the companies invested in were exposed to products, services or activities aligned with one or more of the three promoted characteristics⁸.

While the Fund does not have sustainable investing as its objective, the Fund invested 93.5% of its investments in sustainable investments with a social objective. Investments were considered sustainable if they were deemed by the Investment Manager to contribute to the sustainable investment objectives identified above, passed the Do No Significant Harm test and followed good governance practices.⁹

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. '#1 Aligned with E/S characteristics' etc.)¹⁰

Asset allocation describes the share of investments in specific assets.

⁸ This shows the percentage revenue or operational expenditure exposure of the Fund's assets, including cash, on a portfolio weighted basis, to the Fund's characteristics. The average is calculated as a simple average of the Fund's percentage exposure as at 31 March, 30 June, 30 September and 31 December. In calculating the average, the Investment Manager may use operational expenditure rather than revenue, to calculate an investee company's alignment with the characteristics where that company is a pre-commercial stage company or where the Investment Manager feels that the operational expenditure is more reflective of the company's alignment with the characteristics.

⁹ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

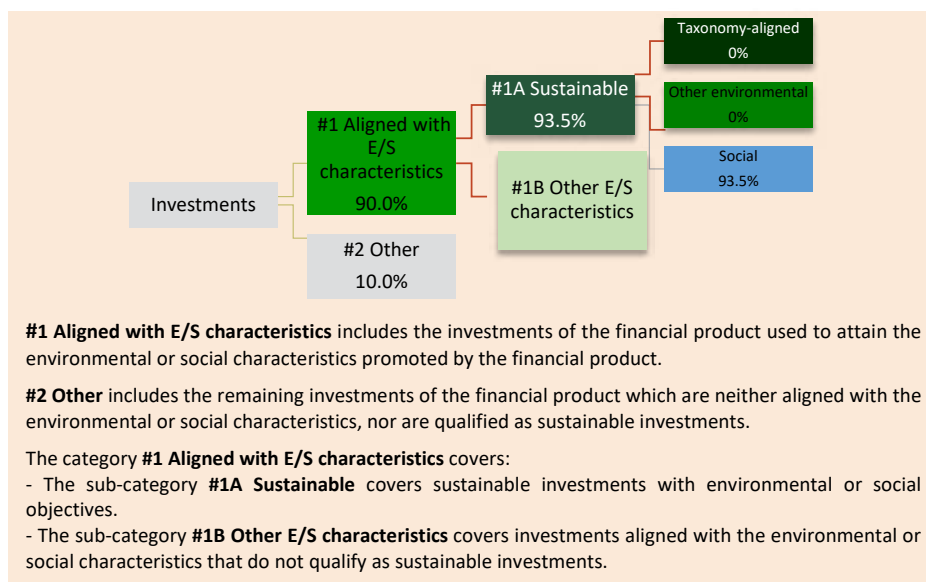

¹⁰ Please note that the sustainable investments figure may be greater than the E/S characteristics alignment figure. This is due to the E/S characteristics alignment figure being the percentage revenue or operational expenditure exposure of the Fund's assets, including cash, on a portfolio weighted basis, to the Fund's characteristics, whereas the full weight of a portfolio holding is considered a sustainable investment if it meets the criteria to be considered a sustainable investment.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● In which economic sectors were the investments made?

Economic Sectors	% Assets ¹¹
Health Care	97.3
Cash and Cash equivalents	2.7

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹²?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

¹¹ This figure shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

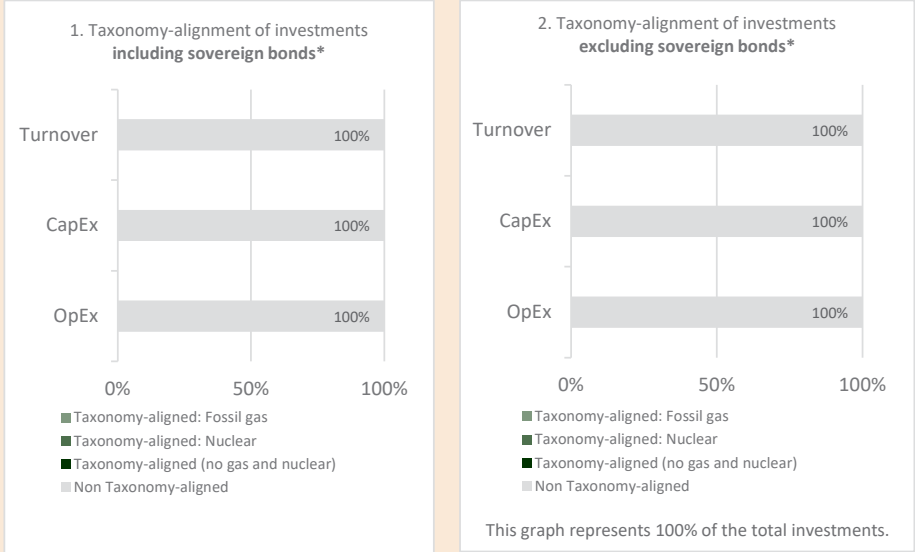

Healthcare Opportunities Fund continued

 No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in Sustainable Investments with an environmental objective, including environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

The Fund's sustainable investments are aligned to the Fund's three characteristics and are considered by the Investment Manager to be sustainable investments with a social objective.

While the Fund does not have sustainable investments as its objective, the Fund invested 93.5% of its investments in sustainable investments with a social objective. Investments were considered sustainable if they met the revenue threshold contributing to the sustainability objectives, passed the Do No Significant Harm test and followed good governance practices.¹³

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The Fund's investments identified as #2 Other in the above diagram were made up of portions of revenues or expenditure of companies the Fund had invested in that were not aligned with the promoted characteristics of the Fund and cash held for liquidity purposes. During the reference period, an average of 10.0% of investments were not aligned with the promoted characteristics of the Fund.¹⁴

All equity investments are subject to minimum environmental or social safeguards through the Fund's exclusion criteria.

The Fund held cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these holdings.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment Manager's methodology for assessing whether an investment contributes to a sustainable investment objective is harmonised with the assessment of its social characteristics.

Detailed examples of how companies held during the reference period were assessed and aligned with the characteristics promoted by the Fund and the sustainable investments objectives contributed to by the Fund are given above in the section "What

¹³ This figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, that were classified as sustainable investments pursuant to the relevant sustainable investment objectives. The average is calculated as a simple average of the Fund's quarterly portfolio weighted percentage of sustainable investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹⁴ This figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, not aligned with the characteristics promoted by the Fund. The average is calculated as a simple average of the percentage of the Fund's assets, on a portfolio weighted basis, that were not aligned with the characteristics as at 31 March, 30 June, 30 September and 31 December.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Healthcare Opportunities Fund continued

were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?”.

Using its sector expertise, company specific knowledge and often, engagement with company representatives, the Investment Manager assessed every prospective investee company for its revenue alignment or, where the company is at pre-revenue stage, operational expenditure alignment, with the characteristics and sustainable investments objectives described above. Every prospective investment was also assessed against the Fund’s exclusion criteria.

Every investee company was assessed on the same basis and its alignment was monitored on an ongoing basis.

As well as pre-trade exclusion checks, a quarterly oversight review ensured compliance with the Fund’s exclusion parameters.

At AGMs or shareholder meetings, the Investment Manager reviewed the resolutions and documented its voting decisions, as well as any resultant engagements with investee companies.

Stewardship activities, including voting, interactions with companies, and follow up engagements emanating from this assessment were documented in a central database. Monitoring of any ESG issues and controversies was undertaken during the reference period and is ongoing.

The Investment Manager engaged with Innovent Biologics following the announcement of a deal whereby the founder and a board director bought 20% of a 100% owned subsidiary. The subsidiary had ownership of the international rights to undisclosed products developed in China. The Investment Manager determined the deal as poor governance due to the lack of disclosure on the assets to enable valuation by the market, as well as no disclosure on the independent valuation advice on the assets. The Investment Manager also felt that the non-executive directors had failed in their duty to act in the interests of all the shareholders. The announcement resulted in a 20% drop in the market cap of the company.

The Investment Manager organised a call with management in which the governance concerns were expressed and best practice for the scenario was explained. The aim of the engagement was to encourage the board to reconsider the transaction. The company sought additional feedback post call, in which the same stance was reiterated. Subsequently, the company announced the termination of the transaction, which the Investment Manager deems as a successful outcome. The Investment Manager will continue to discuss governance improvements with the company, particularly relating to the board composition, with director re-election taking place at the AGM in June 2025.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

Japan Value Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – Japan Value Fund (the “Fund”)
Legal entity identifier: 549300M1VVCT6ODJ5Z19

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<div>● ● <input type="checkbox"/> Yes</div>	<div>● ● <input checked="" type="checkbox"/> No</div>
<div><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%</div> <div><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div> <div><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div> <div><input type="checkbox"/> It made sustainable investments with a social objective: ____%</div>	<div><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments</div> <div><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div> <div><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div> <div><input type="checkbox"/> with a social objective</div> <div><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</div>

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy. Using the Investment Manager’s proprietary ESG analysis tool, the ‘Japan Value Fund ESG Framework’, the Fund excluded companies which were deemed to demonstrate poor environmental or social characteristics as assessed through the Japan Value Fund ESG Framework and its exclusion policy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

The Investment Manager used the Japan Value Fund ESG Framework to measure the attainment of the Fund's ESG characteristics. The Investment Manager also used adherence to the Fund's exclusion policy as an indicator to measure attainment of the Fund's environmental and social characteristics.

All companies in the Fund were assessed under the Japan Value Fund ESG Framework. Where the Investment Manager scored a company on an overall ESG basis below 6, the company was deemed not to have met the required standards of the Japan Value Fund ESG Framework and the Investment Manager excluded that company from the Fund.

Furthermore, in line with the requirements of good governance for all holdings, where a company's Governance score was below 6, it was also deemed to have not met the required standards of the Japan Value Fund ESG Framework and the Investment Manager excluded it from the Fund.

As a result, over the reference period, 100% of investee companies passed the exclusion criteria and minimum scoring threshold, and on average 97.6% of the investments of the Fund, on a portfolio weighted basis as a percentage of total assets including cash, were used to meet the environmental or social characteristics promoted by the Fund¹.

During the reference period, the Fund opened 27 and closed 34 long positions.

● ***....and compared to previous periods?***

The average investments of the Fund, on a portfolio weighted basis as a percentage of total assets including cash, that were used to meet the environmental or social characteristics promoted by the Fund, were almost identical in 2024 compared to 2023. There was a slight increase from 97.3% to 97.6% over the review period.

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

¹ The figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, aligned with the Fund's characteristics as a result of passing the minimum criteria for investment set out in the Japan Value Fund ESG Framework. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Japan Value Fund continued

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives.

Revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. Where material revenues were flagged, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero.

The Investment Manager considered the board gender diversity of investee companies, and, where it deemed appropriate, used its tools of active ownership to encourage better diversity practices.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

The Investment Manager also took into account as part of its process the standards of the United Nations Global Compact, and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident to decide the appropriate action to take: whether to monitor, enter enhanced engagement, or divest from the company. No companies were involved in severe norms violations over the reference period so no action was taken on this basis.

The Investment Manager closed positions in Pasco, Aeon Delight, TS Tech during the period. Concerns over each stock's impact on overall ESG characteristics were part of the decision to sell the stock. In all cases, the Investment Manager was disappointed by the pace of governance improvements and decided to exit the stocks. There were other concerns in place, including the outlook for the core business, that in addition to ESG concerns, led to the stock being sold during the year.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ²		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ³
GHG Emissions (TCO2e)	Scope 1	1,795.8	89.7%	11,773.2	98.4%	-84.7%

	Rohm	Information Technology	2.5	Japan
	Medikit	Health Care	2.5	Japan
	Honda Motor	Consumer Discretionary	2.5	Japan

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

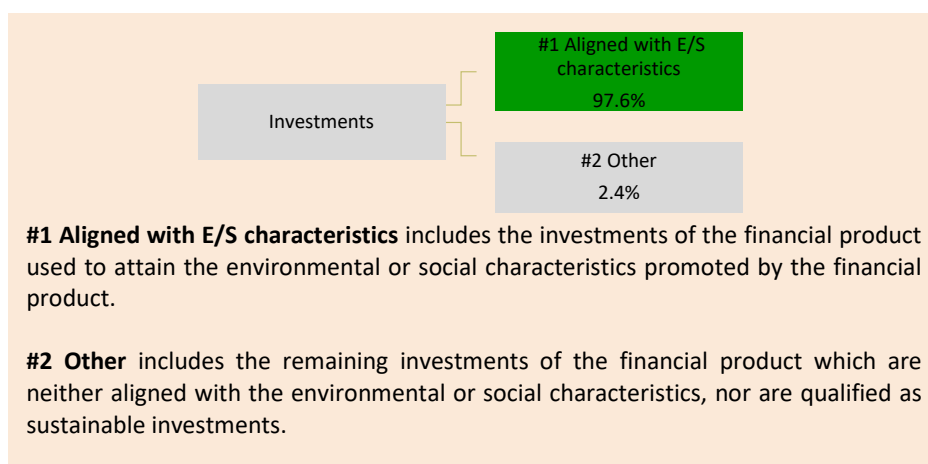

The Fund invested primarily in securities of issuers that are incorporated, have their headquarters, or exercise a significant part of their economic activities in Japan. The Investment Manager used the Japan Value Fund ESG Framework to assess the environmental and/or social characteristics (“E/S”) of each investee company.

100% of the companies the Fund invested in were assessed under the Investment Manager’s Japan Value Fund ESG Framework, which was used to assess and deliver the environmental or social characteristics promoted by the Fund.

⁴ Excluding cash within the top 15 largest investments.

During the reference period, an average of 97.6% of investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund⁵.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’ etc.)

● In which economic sectors were the investments made?

Economic Sectors	% Assets ⁶
Information Technology	24.5
Consumer Discretionary	21.2
Financials	18.3
Industrials	14.0
Health Care	9.2
Consumer Staples	5.9
Materials	4.4
Cash and Cash equivalents	3.2
Communication Services	2.6

⁵ The figure shows the average percentage of the Fund’s assets, including cash, on a portfolio weighted basis, aligned with the Fund’s characteristics as a result of passing the minimum criteria for investment set out in the Financials Team ESG Framework. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted alignment as at each calendar quarter end.

⁶ This shows the percentage of the Fund’s assets within each economic sector as at 31 December 2024.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Japan Value Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

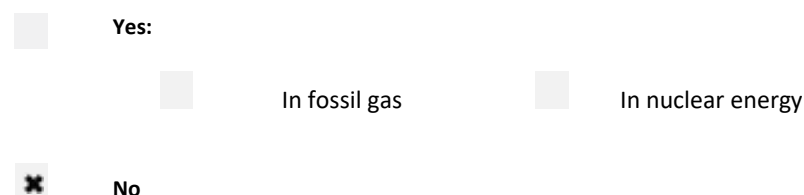

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

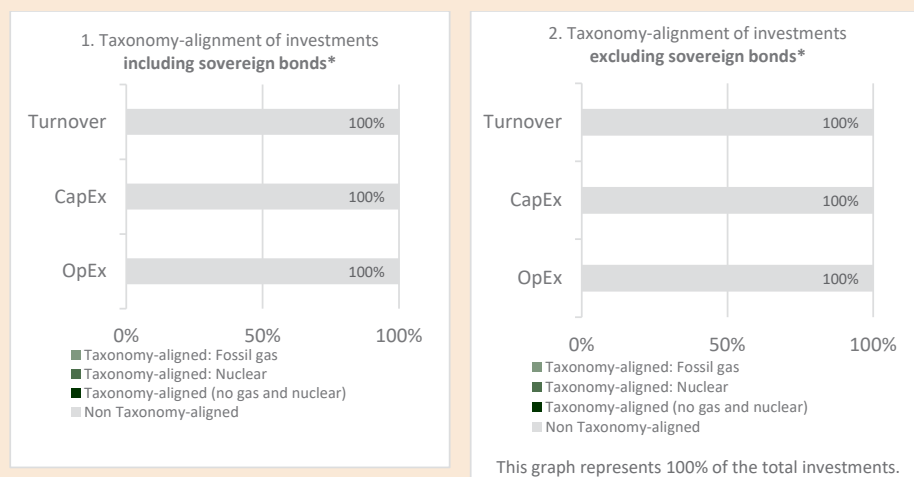

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy⁷?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy Regulation are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 2.4% of the Fund’s investments identified as #2 Other in the above diagram were held in cash in line with the Fund’s Investment Policy. There were no minimum environmental or social safeguards applicable to these investments.⁸

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

In accordance with the investment strategy for the Fund, the Investment Manager assessed every investee company using the Japan Value Fund ESG Framework. This involves an analysis of the company’s environmental, social and governance profile, against a variety of indicators, including but not limited to GHG emissions, culture and board gender diversity, board effectiveness and ownership structure, and the assignment of a specific ESG score from 3 to 15.

Where the Investment Manager scored a company on an overall ESG basis below 6, the company was deemed to have not met the required standards of the Japan Value Fund ESG Framework and the Investment Manager excluded that company from the Fund.

⁸ This figure shows the portfolio weighted average of the assets of the Fund, including cash, which were classified as other investments and therefore not aligned with the characteristics during the reference period. The average alignment is calculated as a simple average of the portfolio weighted alignment at the end of each quarter in 2024.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Japan Value Fund continued

Furthermore, in line with the requirements of good governance for all holdings, if a company's Governance score was below 6, it was also deemed to have not met the required standards of the Japan Value Fund ESG Framework and the Investment Manager excluded it from the Fund.

The governance analysis of a company included a qualitative factor, based on an assessment risk management practices, strategic consistency, litigation/reputational risk and stakeholder engagement, informed through interactions with the company and the responsiveness of its management. When considering risk management practices, both management structures and tax compliance were assessed.

Every existing holding was assessed on the same basis and its alignment was monitored on an ongoing basis. The Investment Manager used a variety of information sources to assess each company including, but not limited to, company financial accounts and statements, third party research, and engagement and dialogue with management.

As an example of the application of the Japan Value Fund ESG Framework, the Investment Manager recently evaluated Ibiden, a Japanese manufacturer specialising in semiconductor packaging. While the company's absolute emissions are moderately high, it provides detailed emissions disclosures and has set ambitious reduction targets, including a goal to achieve net-zero GHG emissions from 2040. Additionally, Ibiden plays a key role in advancing technologies such as AI and electric vehicles, which deliver significant environmental benefits to society. The company scored relatively well in the environmental category and demonstrated exceptional performance in the social and governance areas, resulting in one of the highest overall scores against the Japan Value Fund ESG Framework.

During the reference period, the Investment Manager also evaluated Daiseiki, a company specialising in industrial waste recycling. The company performed relatively well on the environmental criteria; although its carbon intensity is moderate, it provides significant societal benefits and has emissions levels that compare favourably to its peers. The company's social score was neutral. The governance assessment indicated that, while board effectiveness is above average, the company excels in corporate structure and management alignment. Overall, Daiseiki's scores were slightly higher than Ibiden's against the Framework.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How does the reference benchmark differ from a broad market index?*

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

North American Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – North American Fund (the “Fund”)
Legal entity identifier: 549300E1985KCB4EO849

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy.

Using the Investment Manager’s proprietary ESG analysis framework (the “North American Fund Framework”), the Fund sought to invest in companies with positive aggregate scores against the four ESG categories below:

- (i) Interaction with the Environment - This concerns a company's management of the risks and opportunities related to the environment.
- (ii) Treatment of Stakeholders - This concerns a company's practices and policies in relation to all stakeholders.
- (iii) Corporate Governance - This concerns a company's governance structures and frameworks.
- (iv) Positive Contribution to Society - This concerns the company's ability to contribute to broader society in a sustainable manner and the likelihood that this will improve over time.

● **How did the sustainability indicators perform?**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Investment Manager used the North American Fund Framework to measure the attainment of the Fund's environmental or social characteristics against the four categories described above.

All companies in the Fund were assessed under the North American Fund Framework. For the full year, an average of 99%¹ of companies in the Fund scored 1 or higher on the North American Fund Framework. When including cash in the denominator, an average 97%² of the investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund.

In addition, all companies passed the North American Fund Framework minimum criteria of not scoring -3 on any single category and not scoring below -4 in aggregate across the 4 categories.

There was no significant deterioration in the scores for any company over the period.

A summary of the Fund's headline scores of the four categories over the reference period is shown below, both including cash as previously reported³, and excluding cash⁴:

¹ This figure shows the percentage of investee companies of the Fund, on a portfolio weighted basis, that exceeded the threshold of scoring 1 or higher in aggregate across the four categories of the North American Fund Framework. The full year average is calculated as a simple average of the Fund's percentages as at the end of each quarter. Please note that within the 2023 report for the Fund, this footnote incorrectly stated that the figure was calculated on an equal weighted basis. However, the figure correctly showed the figure calculated on a portfolio weighted basis.

² This figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that exceeds the threshold of scoring 1 or higher in aggregate across the four categories of the North American Fund Framework. The average is calculated as a simple average of the Fund's percentages as at the end of each quarter.

³ These figures show the performance of investee companies of the Fund, on a portfolio weighted basis, including cash, against the North American Fund Framework. This has been included for completeness and consistency with previous years reporting.

⁴ These figures show the performance of investee companies of the Fund, on a portfolio weighted basis, against the North American Fund Framework.

⁷ These figures show the performance of investee companies of the Fund, on a portfolio weighted basis, including cash, against the North American Fund Framework. This has been included for completeness and consistency with previous years reporting.

Portfolio weighted – excluding cash⁸

Category	2022 Average	2023 Average
Interaction with the Environment	1.2	1.1
Treatment of Stakeholders	1.1	0.8
Corporate Governance	1.1	0.9
Positive Contribution to Society	1.3	1.3
Fund North American Fund Framework Score	4.6	4.2

The average aggregate score was almost identical in 2024 compared to 2023. While a number of companies held in the portfolio saw their scores upgraded or downgraded, the net effect of this on the aggregate score was actually negligible, as the upgrades and downgrades offset each other. In addition, the changes made to holdings, i.e. the effect of complete sales of positions and the inclusion of new positions, had a neutral effect on the average aggregate score.

No changes were made to the process over the reporting period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

⁸These figures show the performance of investee companies of the Fund, on a portfolio weighted basis, against the North American Fund Framework. This is how the figures will be reported in future years.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

North American Fund continued

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

This Fund did not consider the principle adverse impacts of its investment decisions on sustainability factors pursuant to Article 7 of the SFDR during the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What was the asset allocation?

The Fund invested primarily in a diversified portfolio of North American listed companies. The Investment Manager used the North American Fund Framework to assess the environmental and/or social characteristics ("E/S") of each investee company.

100% of the companies the Fund invested in were assessed under the Investment Manager's North American Fund Framework, which was used to assess and deliver the environmental or social characteristics promoted by the Fund.

Asset allocation
describes the
share of
investments in
specific assets.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

North American Fund continued

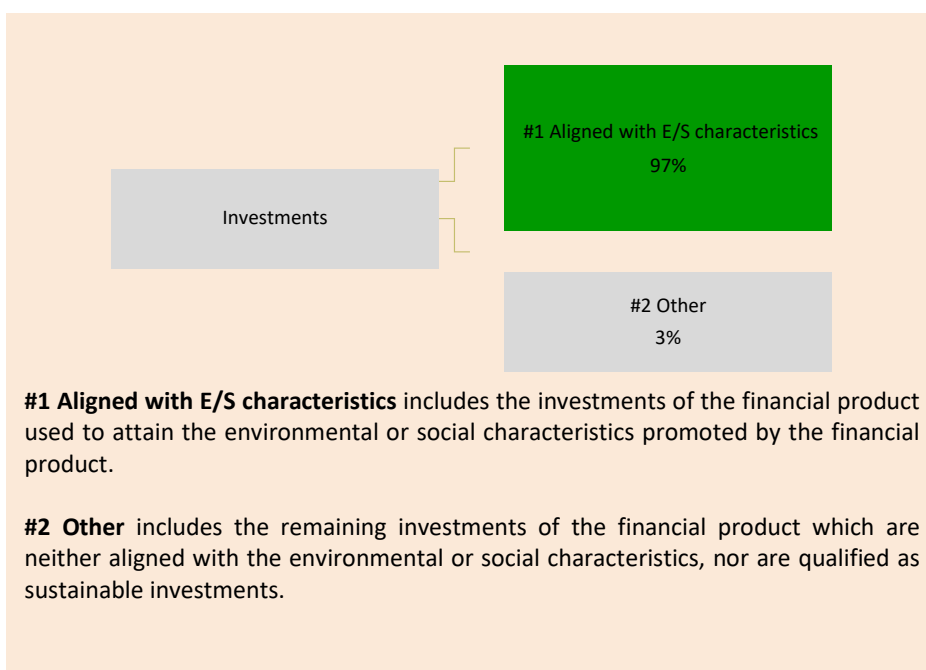

All companies in the Fund were assessed under the North American Fund Framework. For the full year, an average of 99%⁹ of companies in the Fund scored 1 or higher on the North American Fund Framework.

When including cash in the denominator, an average 97%¹⁰ of the investments of the Fund were used to meet the environmental or social characteristics promoted by the Fund. In addition, all companies passed the North American Fund Framework criteria of not scoring -3 on any single category and not scoring below -4 in aggregate across the 4 categories. There was no significant deterioration in the scores for any company over the period.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ‘#1 Aligned with E/S characteristics’, etc.).

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

⁹ This figure shows the percentage of investee companies of the Fund, on a portfolio weighted basis, that exceeded the threshold of scoring 1 or higher in aggregate across the four categories of the North American Fund Framework. The full year average is calculated as a simple average of the Fund's percentages as at the end of each quarter.

¹⁰ This figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that exceeds the threshold of scoring 1 or higher in aggregate across the four categories of the North American Fund Framework. Further to the information provided above, the Regulatory Technical Standards of the SFDR requires Article 8 SFDR funds to identify their exposure to the fossil fuel sector, including those companies that are involved in the value or supply chain of fossil fuels.

The Fund held positions in the following companies during the reference period which were exposed to fossil fuels:

Canadian Natural Resources Limited, Cenovus Energy and Imperial Oil

Canadian Natural Resources Ltd, Cenovus Energy and Imperial Oil are Canada-based companies engaged in oil and gas exploration and production. While the Investment Manager considers lower demand for hydrocarbons over the next several decades to be a threat to these businesses, the Investment Manager also expects long term supply to struggle to keep up with demand, given lack of investment in the industry and the finite nature of the resource. With reserves that can sustain current production levels for decades, all three companies are strategically advantaged.

The Investment Manager also considers that it is beneficial for society that its hydrocarbon production requirements come from businesses with sound environmental and social credentials. The Investment Manager believes the three companies have relatively high standards with a good record of reducing emissions and a credible plan to continue to do so.

In 2021, the three companies in question, along with Canada's other largest oil sands producers, established the Pathways Alliance. The goal of this alliance, working collectively with the Federal and Alberta governments, is to achieve net zero greenhouse gas ("GHG") emissions from oil sands operations by 2050, to help Canada meet its climate goals, including its Paris Agreement commitments and 2050 net zero carbon emissions aspirations. This is one of the most substantial and credible intra industry alliances across the world when it comes to climate change that the Investment Manager is aware of. Moreover, from a social perspective, the

¹¹ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

North American Fund continued

companies have a good record of safety and working with local aboriginal communities.

The position in Imperial Oil was sold during the reference period.

Union Pacific

Union Pacific connects approximately 23 states in the western two-thirds of the United States of America by rail. The company currently flags for fossil fuel revenue exposure as it derives revenues from oil, gas and coal transportation. However, this is a minority part of the business and the company should also benefit in the future from the transport required to build renewable energy infrastructure.

The Investment Manager takes account of the fact that Union Pacific uses hydrocarbons to power its fleet. Consumption of hydrocarbons emits more GHGs than production. On the positive side, where rail competes with other viable transportation alternatives such as trucking, rail is a more efficient transport solution when it comes to GHG emissions (75% lower emissions per ton of goods transported). The company has successfully reduced carbon intensity over the last decade and has a credible plan to continue to do so, having made a commitment to set a net zero target in line with SBTi.

Norfolk Southern

Norfolk Southern provides rail transportation for the eastern part of the United States. The company derives revenues from oil, gas and coal transportation. However, this is a minority part of the business and the company should also benefit in the future from the transport required to build renewable energy infrastructure.

Similar to Union Pacific, the Investment Manager takes account of the fact that Norfolk Southern uses hydrocarbons to power its fleet and that consumption of hydrocarbons emits more GHGs than production. However, as stated above, where rail competes with other viable transportation alternatives such as trucking, rail is a more efficient transport solution when it comes to GHG emissions (75% lower emissions per ton of goods transported).

The company has successfully reduced carbon intensity over the last decade and has a credible plan to continue to do so. Norfolk Southern also has a very small legacy subsidiary, Pocahontas Land, that owns natural resource properties which have coal reserves. This is immaterial to the company's financials and future prospects.

The Investment Manager engaged with the company over a multi-year period, primarily related to safety and the risk of environmental damage.

The position in Norfolk Southern was sold during the reference period.

Teck Resources Limited

Teck Resources Limited is a Canada-based mining company that operates in copper, zinc and steelmaking coal. Until recently, the company derived a large part of its cash flows from the production of metallurgical coal for use in steel making.

The Investment Manager considers this a long term risk over the next several decades as steel manufacturers eventually move to cleaner forms of production. However, of note, the business is ramping up its copper production. Copper is a key base metal required for the electrification of society and is a key element required for renewable energy infrastructure.

As expected by the Investment Manager, the company sold all its metallurgical coal assets to Glencore in 2024. The company expects to derive the majority of its future profits from copper and this provides a large opportunity for value creation for the business and also upward valuation potential for the stock. Also of note, the company has a strong record with environmental and social related issues and the Investment Manager expects this to continue. For instance, the company has been costing carbon pricing into the majority of its operations since 2008. It has goals to achieve net-zero GHG emissions by 2050 across all aspects of its business and activities, and net-zero on a Scope 2 GHG emissions basis by 2025. Some of these goals will be accelerated by the formal divestment of the coal assets, and we expect the company to highlight this in its post-divestment sustainability report.

From a social perspective, the company has a strong safety record and a strong programme of supporting local communities.

The position in Teck Resources was sold during the reference period.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

North American Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

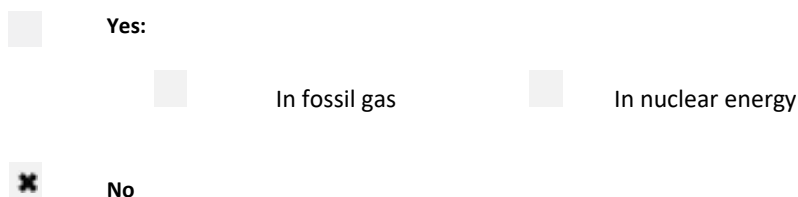

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

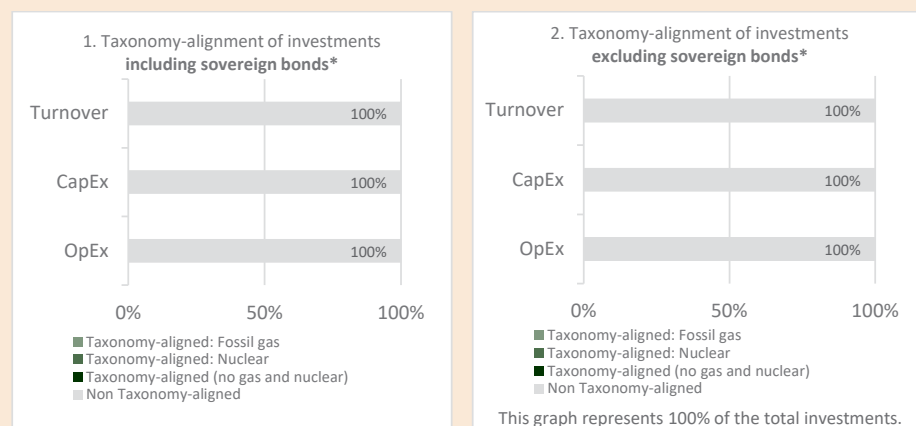

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹²?

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period, an average of 10% of the Fund’s investments were identified as #2 Other in the above diagram.

The Fund held positions in equity securities that did not contribute towards the Fund’s promoted characteristics, as well as cash for liquidity purposes.

All equity securities were assessed under the North American Fund Framework to ensure their compliance with minimum social safeguards. All investee companies analysed passed the exclusion criteria of scoring better than -3 on any single category (including environmental and social categories) and scoring above -4 in aggregate across the 4 categories, meaning all positions held complied with the minimum requirements of the North American Fund Framework.

There are no minimum environmental or social safeguards applicable to cash investments.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

North American Fund continued

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

All investee companies were assessed under the North American Fund Framework, which incorporates 4 ESG-related categories as part of a 15-point fundamental checklist. 2 of those 4 ESG categories specifically address environmental and social characteristics of investments. All investee companies analysed passed the exclusion criteria of scoring better than -3 on any single category (including environmental and social categories) and scoring above -4 in aggregate across the 4 categories.

The Investment Manager analysed and appraised information from multiple sources during the reference period, including reports from third party ESG specialists and documents from companies themselves, such as 10Ks and sustainability reports. The Investment Manager also conducted meetings with the management of a number of prospective and current investee companies.

Material engagement issues raised with management teams over the period including email interactions and a video call with US Foods, a provider of services to the food and hospitality industry, relating to an ostensible falling behind on emissions targets. The Investment Manager engaged with the company's head of sustainability and general counsel to better understand the initiatives in place and to emphasise the importance of credible progress towards goals. In this instance, the company experienced a large increase in activity in its business and hence the absolute level of emissions increased. The company assured the Investment Manager that it can still hit the target of a 32.5% reduction by 2032, compared to a 2019 baseline, but needs extra efforts on EV fleets and route logistics.

Two other, but related, examples of engagement were with the Canadian energy companies, Cenovus and Canadian Natural Resources. The Investment Manager wanted to get a better understanding regarding recent changes to environmental disclosures. Both companies, in response to amendments to the Canadian Competition Act, chose to remove disclosures related to their environmental performance and strategy. The Investment Manager was assured that this did not reflect any change to the strong commitments and initiatives underway. But rather the change in tack was a direct response to legislation that made it a business risk to maintain the same level of disclosures – the companies would like to resume their typical disclosures but need to gain clarity on from the government on the risk of litigation if they were to do so. The Investment Manager is continuing its engagement efforts on this point, and hoping to establish a means by which progress on environmental goals can still be monitored.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

- ***How does the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

Smart Energy Fund

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Smart Energy Fund (the “Fund”)
Legal entity identifier: 5493000XYVRO8AIHN823

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
<div><input checked="" type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> Yes</div> <div><input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 99.2%<div><div><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div></div></div> <div><input type="checkbox"/> It made sustainable investments with a social objective: ____%</div>	<div><div><input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> No</div><div><input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments<div><div><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</div><div><input type="checkbox"/> with a social objective</div></div></div><div><input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</div></div>

To what extent was the sustainable investment objective of this financial product met?

The Fund has sustainable investment as its objective. Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The Fund achieved its sustainable investment objective by investing in a portfolio of companies worldwide that supported, through their technology solutions and services, the decarbonisation and electrification of the global energy sector.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

● How did the sustainability indicators perform?

The Investment Manager measured the Fund's alignment with its sustainable investment objective on a qualitative and quantitative basis by:

1. The alignment of the Fund's investments with the Fund's eligible investment universe, as described in the 'Investment Strategy' section of the Fund's SFDR prospectus annex and website disclosures, which only includes companies that derive a significant portion of their current or future revenue from activities that are in line with the Fund's sustainable investment objective.

2. The alignment of the Fund's investments with the Investment Manager's exclusions list for the Fund, as set out in the 'Investment Strategy' section of the Fund's SFDR prospectus annex and website disclosures.

During the reference period of this annual report, the Investment Manager's eligible investment universe comprised four main themes. A breakdown of the Fund weightings to the four themes over the reference period is given below.

Fund exposures to each of the four themes over the reference period¹:

Investment Area	31-Mar-24	30-Jun-24	30-Sep-24	31-Dec-24	Average 2024 ²
Clean Power Generation	5.3%	6.5%	7.4%	9.5%	7.2%
Energy Conversion & Storage	33.3%	34.2%	30.0%	22.1%	29.9%
Energy Efficiency	44.5%	46.4%	50.8%	57.9%	49.9%
Energy Transmission & Distribution	15.9%	12.5%	10.6%	10.2%	12.3%
Cash	1.1%	0.5%	1.2%	0.3%	0.8%
Total	100.0%	100.0%	100.0%	100.0%	100.0%

The Fund's weighted average current or future revenue alignment to the four themes over the reference period²:

Investment Area	31-Mar-24	30-Jun-24	30-Sep-24	31-Dec-24	Average 2024
Clean Power Generation	100.0%	82.7%	74.6%	71.4%	82.2%
Energy Conversion & Storage	80.1%	82.7%	77.6%	79.2%	79.9%
Energy Efficiency	80.0%	78.3%	79.9%	78.6%	79.2%
Energy Transmission & Distribution	78.0%	80.2%	78.2%	77.7%	78.5%
Cash	0.0%	0.0%	0.0%	0.0%	0.0%
Total Weighted Average	79.9%	80.0%	77.7%	77.7%	78.8%

¹ The table shows the percentage of the Fund's investments, on a portfolio weighted basis, aligned with investment areas contributing to the Fund's sustainable investment objective as at the relevant date.

² The table shows the average alignment of the current or future revenues of the investee companies within each investment area (please see Figure 1 for details of the percentage of the Fund aligned with the relevant investment areas) as at the relevant date.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Energy Fund continued

During the reference period, the Fund did not invest in any companies that were not aligned with the Fund's sustainable investment objective by virtue of not meeting the prescribed current or future revenue exposure threshold. The Investment Manager did not invest in companies that participated in activities linked to the Fund's exclusions criteria.

All of the Fund's equity investments during the reference period contributed to the Fund's sustainable investment objective through their exposure to one or more of the sub-themes set out above.

During the reference period, the Fund averaged 99.2%³ in Sustainable Investments that met the sustainable investment objective, of which 100% contributed to environmental objectives.

The Fund did not use derivatives to attain its sustainable investment objective over the reference period.

● ...and compared to previous periods?

Investment Area ⁴	Portfolio Average Weight 2021	Revenue Exposure 2021 ⁵	Portfolio Average Weight 2022	Average Revenue Exposure 2022	Portfolio Average Weight 2023	Average Revenue Exposure 2023
Clean Power Generation	6.6%	100.0%	18.4%	100.0%	8.1%	100.0%
Energy Conversion & Storage	35.7%	76.0%	28.4%	76.8%	34.8%	75.9%
Energy Efficiency	45.1%	79.1%	37.6%	86.0%	43.8%	81.8%
Energy Transmission & Distribution	12.2%	76.2%	15.2%	81.2%	12.3%	71.3%
Cash	0.4%	0.0%	0.4%	0.0%	1.0%	0.0%
Total	100.0%	78.7%	100.0%	84.8%	100.0%	79.1%

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

³ The figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are Sustainable Investments. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

⁴ Please note that the 'Portfolio Average Weight' and 'Average Revenue Exposure' figures provided for 2022 and 2023 in previous annual reports were misstated due an averaging error. The error resulted in the last five quarterly figures being averaged and reported, rather than the last four quarterly figures. The correct figures for 2022 and 2023 have been reported here but do not align with reports issued in relation to the Fund prior to this date. Please use the 2022 and 2023 figures provided in this report for all analysis and comparisons in relation to these periods.

⁵ Please note that the Fund launched on 30 September 2021. The Fund's 2021 thematic alignment and revenue alignment figures are therefore provided as at 31 December 2021 and do not represent a quarterly average as do the Fund's 2022 and 2023 thematic alignment and revenue alignment figures.

● ***How did the sustainable investments not cause significant harm to any sustainable investment objective?***

The Investment Manager, in compliance with the principle of Do No Significant Harm (“DNSH”), assessed each company, primarily using third party data, on whether it had an adverse impact on the environment and society.

Companies with controversies that had severe adverse impacts on the environment and society were excluded from consideration as Sustainable Investments by the Investment Manager and were, therefore, excluded from the Fund.

The Investment Manager used research from third party providers to provide deeper insights into a company’s compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over the assessment of whether a company was involved in a severe controversy over the review period.

As an example, the Investment Manager excluded Xinyi Solar Holdings, a solar glass manufacturer, from the universe. Corporate governance continues to be weak with a controlled board run by the family, with only a third of the board being independent, an entrenched board, poor remuneration structure and significant votes against directors. Additionally, it was downgraded by MSCI to BBB on limited information on environmental impact audits and non-pay benefits.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts (“PAI”) indicators provided in Table 1 (and where applicable, Tables 2 and 3) of Annex 1 to the SFDR Regulatory Technical Standards.

Over the reference period, the Investment Manager carried out a screening process during the construction of its eligible investment universe to exclude any companies that significantly harm environmental or social objectives due to their involvement in a range of controversial business activities. The Investment Manager used external ESG data providers as an initial input for the screen. In addition, the Fund employs an exclusion policy that excludes investment altogether in companies that operate in sectors that are deemed to have a negative impact on the environment or society.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager, to the best of its ability, used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Energy Fund continued

As an example, Infineon Technologies, a global leader in automotive and industrial power semiconductors enabling the transition to clean energy end electrification of transportation was flagged for further investigation due to its carbon emissions trend and waste management. After assessing its sustainability performance relating to carbon emissions and waste management, the Investment Manager decided to keep the company in the universe and the Fund.

Infineon commits to use 100% renewable electricity by 2025 and to become carbon neutral by 2030. Its carbon intensity trend is improving and lower than the sector average. Infineon announced the availability of comprehensive Product Carbon Footprint (PCF) data for customers, taking a pioneering role in the semiconductor industry. The company is committed to provide PCF data for its entire product portfolio, starting with about half of the portfolio. In the absence of established industry standards, Infineon has developed a methodology to calculate the Product Carbon Footprint, incorporating customer needs and best practices. Infineon includes emissions from raw materials, its own manufacturing processes, manufacturing partners and transportation to the customer (“from cradle to gate”). This means that the Product Carbon Footprint reported by Infineon covers scope 1 and 2 emissions as well as scope 3 emissions from suppliers and manufacturing partners, all the way to the customer's gate. It has put in place a comprehensive waste management strategy, focusing, in particular, on avoiding waste and preserving the value of the resources the company uses by adopting the principles of the circular economy. In FY24, Infineon was able to send 73% of its non-hazardous and 78% of its hazardous waste for reuse in recycling, resulting in an overall recycling rate of 76%.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with these global norms, and where necessary, conducting further due diligence to determine compliance with these norms.

To ensure that Sustainable Investments were aligned with the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, the Fund excluded companies deemed to have been involved in severe violations of the UNGC principles and OECD Guidelines using third party controversy research related to these global norms.

How did this financial product consider principal adverse impacts on sustainability factors?

As part of its do no significant harm assessment (“DNSH”) with respect to sustainable investments, the Investment Manager considered the mandatory Principal Adverse Impacts (PAI) indicators provided in Table 1 (and where applicable, Tables 2 and 3) of Annex 1 of the Regulatory Technical Standards.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Where material, the Investment Manager considered the following principal adverse impacts of a company on the environment and society in the manner described below.

Unless subject to an exclusion, either as a result of the application of the exclusions policy or as a result of a principle adverse impact indicating that the company causes significant harm to a sustainable investment objective, where it was deemed necessary or prudent, the Investment Manager sought to improve the adverse impacts of investee companies through active ownership activities such as engagement, voting or if necessary, divestment from the company within a reasonable timeframe, taking into consideration the best interests of the Fund and its Shareholders.

Factors considered when assessing a company's impact on the environment included greenhouse gas ("GHG") emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity, energy consumption and/or production profile and carbon reduction initiatives. Revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager.

In accordance with the Fund's exclusions criteria, companies involved in the exploration, production and distribution of oil, natural gas, coal, and the first generation of biofuels (derived from food crops) are excluded. Furthermore, utilities with fossil fuel or nuclear power generation, as well as natural gas transmission and distribution utilities, are also excluded.

Similarly, the Investment Manager considered the biodiversity impact of, the water use of and hazardous waste generated by a company, where deemed material.

The Investment Manager considered the board gender diversity and, where possible, gender pay gap of investee companies.

The Investment Manager considered the standards of the United Nations Global Compact ('UNGC'), and the Organisation for Economic Co-Operation and Development's ('OECD') Guidelines for Multinational Enterprises. If a company is involved in severe controversies or norms violations, the Investment Manager assesses the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company.

During the reference period, no investee companies were deemed to be in violation of the standards of the United Nations Global Compact, and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance in relation to selected PAI indicators compared to the Fund's benchmark.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Linde	Materials	3.0	United States
ON Semiconductor	Information Technology	3.0	United States
Lennox International	Industrials	2.9	United States
NXP Semiconductor	Information Technology	2.7	Netherlands

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 31 December 2024

⁶ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity and board gender diversity data as of 31 December 2024. Benchmark: MSCI ACWI Net TR Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €240.6 m as of 31 December 2024. The Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁷ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What was the proportion of sustainability-related investments?

What was the asset allocation?

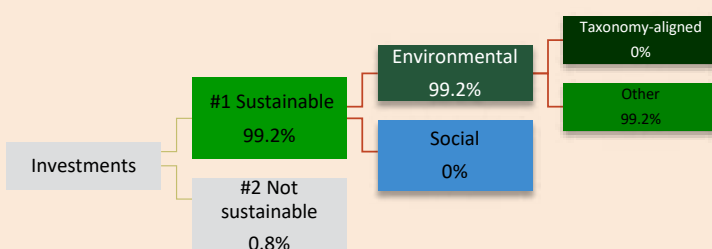

The Fund invests primarily in companies worldwide that support, through their technology solutions and services, the decarbonization and thereby electrification of the global energy sector.

All investments held by the Fund in equity participations were used to meet the Fund's sustainable investment objective.

During the reference period, the Fund averaged 99.0%⁸ in Sustainable Investments that met the Fund's sustainable investment objective, of which 100% contributed to environmental objectives.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. '#1 Sustainable', 'Environmental' etc.)

Asset allocation describes the share of investments in specific assets.

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector	% Assets ⁹
Information Technology	48.3
Industrials	36.1
Materials	8.5
Consumer Discretionary	5.6
Utilities	1.2
Cash and Cash equivalents	0.3

⁸ This is the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are Sustainable Investments. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

⁹ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Energy Fund continued

In accordance with the Fund's exclusion criteria, investments in fossil fuel exploration and production companies, as well as in utilities with thermal fossil power generation, are prohibited and, therefore, the Fund did not have any exposure to fossil fuels over the review period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of investments of the Fund in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, was 0% over the reference period.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁰?

- ☐ Yes:

☐ In fossil gas ☐ In nuclear energy

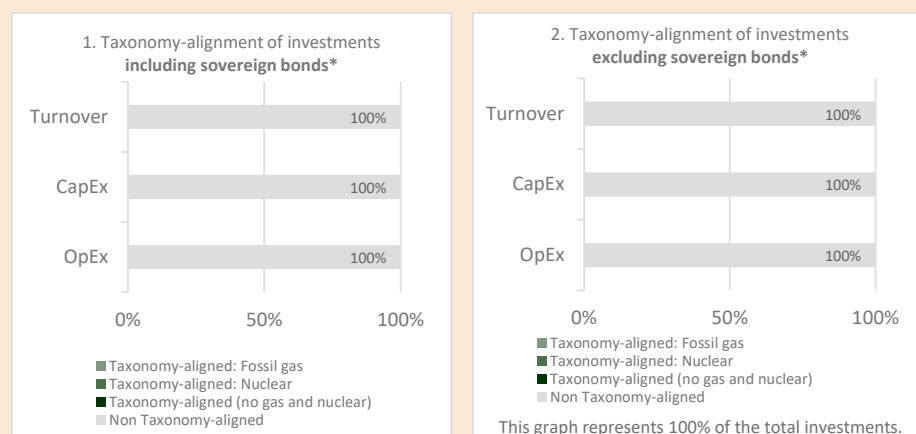

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **What was the share of investments made in transitional and enabling activities?**

The proportion of investments of the Fund in transitional and enabling activities, and aligned with the requirements of the EU Taxonomy Regulation, was 0% over the reference period.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

During the previous reference period, the Fund was 0% aligned with the EU Taxonomy Regulation and during this reference period the Fund was 0% aligned with the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

During the reference period, the Fund averaged 99.2% in Sustainable Investments that met the Fund's sustainable investment objective, of which 100% contributed to environmental objectives not aligned with the EU Taxonomy Regulation.

In order to satisfy itself that an investment is environmentally sustainable pursuant to the EU Taxonomy Regulation, the Investment Manager must (a) be satisfied that the investments underlying the Fund are in environmentally sustainable activities (b) identify the extent to which the investments of the Fund are in economic activities that qualify as environmentally sustainable and are aligned with the EU Taxonomy Regulation; (c) identify the proportion, as a percentage of the Fund's portfolio, of investments in environmentally sustainable activities which are aligned with the EU Taxonomy Regulation; and (d) identify the proportion, as a percentage of the Fund's portfolio, of enabling and transitional activities (as described in the EU Taxonomy Regulation).

At the present time, the Investment Manager cannot satisfy itself that the Fund's investments meet the criteria outlined above. Accordingly, the proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the EU Taxonomy Regulation is 0% of the Fund's net assets.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund will be invested in Sustainable Investments contributing to environmental objectives only. Therefore, the Fund's share of socially sustainable investments was 0% over the reference period.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Energy Fund continued

The Fund's investments identified as #2 Not Sustainable averaged 0.8% over the review period and consisted of cash for liquidity purposes. There are no minimum environmental or social safeguards applicable to these investments.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the reference period, the Investment Manager maintained the Fund's eligible investment universe across four investment themes; (i) Clean Power Generation; (ii) Energy Conversion and Storage; (iii) Energy Efficiency; and (iv) Energy Transmission and Distribution. The alignment of a company with the four investment clusters was determined by its current or future revenue exposure to these themes.

The Fund only invested in companies within the eligible investment universe and, therefore, all the companies in the portfolio passed the necessary minimum thematic threshold and did not breach the SFDR's principles of 'do no significant harm' and 'good corporate governance'.

The eligible investment universe maintained by the Investment Manager serves as a reference portfolio to the Fund, both in terms of financial performance and in terms of contribution to the sustainable investment objective. The Investment Manager reviewed the companies that qualify for the eligible investment universe on a periodic basis during the reference period and companies that were not aligned with the Fund's sustainable investment objective, by virtue of not meeting the prescribed current or future revenue exposure threshold, not passing the DNSH assessment (including with reference to PAI indicators) or not having good governance practices, were excluded from the eligible investment universe. Further companies that participated in activities linked to the Fund's exclusion criteria were excluded from the eligible investment universe.

Similarly, additional new companies that met the previously mentioned criteria were added to the eligible investment universe. An example is the addition of Hitachi Ltd, a company supplying electrical grid infrastructure equipment, to the universe and the Fund during the review period.

Its products include transformers, high-voltage power transmission and grid automation solutions, enabling electrification, flexible smart grids and enhancing energy efficiency. The company is allocated to the Energy Efficiency investment theme.

The Investment Manager did engage with an investee company involved in the production of rare earth products in 2022 where it felt that there was room for material sustainability improvement in addressing the environmental and social impacts of its activities over the reference period. The Investment Manager followed up with the company in 2024. The Investment Manager considers the dialogue to be satisfactory, and the company continues to make progress on ESG issues. This engagement is still ongoing. The Investment Manager's approach is dedicated and focused engagement to discuss material ESG issues that are relevant to the specific business case. The Investment Manager generally conducts 1-3 year direct engagement dialogues with selected companies where it deems necessary.

In addition, the Investment Manager participated in a collaborative engagement, organised by Spring, a PRI stewardship initiative for nature, with an investee company producing battery and energy storage solutions. The engagement focus is on biodiversity and supply chain management. It is the initial engagement dialogue with the company, and it is still ongoing.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did the reference benchmark differ from a broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did this financial product perform compared with the reference benchmark?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● ***How did this financial product perform compared with the broad market index?***

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Smart Mobility Fund

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc - Smart Mobility Fund (the “Fund”)

Legal entity identifier: 549300O06PO1N5TPN874

<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Fund has sustainable investment as its objective. Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The Fund achieved its sustainable investment objective by investing in a portfolio of companies worldwide that support, through their technology solutions and services, the decarbonisation and transformation of the global transport sector.

● **How did the sustainability indicators perform?**

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Investment Manager measured the Fund's alignment with its sustainable investment objective on a qualitative and quantitative basis by:

1. The alignment of the Fund's investments with the Fund's eligible investment universe, as described in the 'Investment Strategy' section of the Fund's SFDR prospectus annex and website disclosures, which only includes companies that derive a significant portion of their current or future revenue from activities that are in line with the Fund's objective.
2. The alignment of the Fund's investments with the Investment Manager's exclusions list for the Fund, as set out in the 'Investment Strategy' section of the Fund's SFDR prospectus annex and website disclosures.

During the reference period of this annual report, the Investment Manager's eligible investment universe comprised four main themes. A breakdown of the Fund weightings to the four themes over the reference period is given below.

Fund Exposures to each of the four themes over the reference period¹:

Investment Area	31-Mar-24	30-Jun-24	30-Sep-24	31-Dec-24	Average 2024 ²
Autonomous Driving	24.4%	24.4%	24.4%	28.0%	25.3%
EV Manufacturing	21.7%	17.6%	17.9%	19.8%	19.3%
EV Technologies	29.7%	30.1%	35.9%	30.1%	31.5%
Mobility Infrastructure	23.6%	24.7%	19.0%	19.5%	21.7%
Cash	0.6%	3.1%	2.7%	2.5%	2.2%
Total	100.0%	100.0%	100.0%	100.0%	100.0%

The Fund's weighted average current or future revenue alignment to the four themes over the reference period³:

Investment Area	31-Mar-24	30-Jun-24	30-Sep-24	31-Dec-24	Average 2024 ⁴
Autonomous Driving	31.1%	28.5%	29.9%	28.6%	29.5%
EV Manufacturing	44.7%	50.0%	53.5%	72.7%	55.2%
EV Technologies	51.6%	47.7%	40.4%	43.5%	45.8%
Mobility Infrastructure	44.6%	45.9%	31.8%	33.4%	38.9%
Cash	0.0%	0.0%	0.0%	0.0%	0.0%
Total Weighted Average	43.2%	41.5%	37.5%	42.0%	41.0%

¹ The table shows the percentage of the Fund's investments, on a portfolio weighted basis, aligned with investment areas contributing to the Fund's sustainable investment objective as at the relevant date.

² The figures show the average alignment of the Fund with each investment area during the reference period. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at the end of each quarter (i.e. 31 March, 30 June, 30 September and 31 December).

³ The table shows the average alignment of the current or future revenues of the investee companies within each investment area (please see Figure 1 for details of the percentage of the Fund aligned with the relevant investment areas) as at the relevant date.

⁴ The average is calculated as a simple average of the quarterly portfolio weighted averages as at the end of each quarter (i.e. 31 March, 30 June, 30 September and 31 December).

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Mobility Fund continued

During the reference period, the Fund did not invest in any companies that were not aligned with the Fund's sustainable investment objective by virtue of not meeting the prescribed current or future revenue exposure threshold.

All of the Fund's equity investments during the reference period contributed to the sustainable investment objective through their exposure to one or more of the sub-themes set out above.

During the reference period, the Fund averaged 97.8%⁵ in Sustainable Investments that met the Fund's sustainable investment objective, of which 100% contributed to environmental objectives.

The Fund did not use derivatives to attain its sustainable investment objective over the reference period.

● ...and compared to previous periods?

Investment Area ⁶	Portfolio Average Weight 2021	Revenue Exposure 2021 ⁷	Portfolio Average Weight 2022	Average Revenue Exposure 2022	Portfolio Average Weight 2023	Average Revenue Exposure 2023
Autonomous Driving	14.1%	31.9%	23.3%	30.4%	21.2%	29.3%
EV Manufacturing	20.5%	52.4%	18.3%	62.4%	18.0%	52.2%
EV Technologies	40.7%	41.8%	35.2%	47.0%	33.9%	47.2%
Mobility Infrastructure	24.2%	57.1%	23.0%	51.4%	25.9%	48.2%
Cash	0.5%	0.0%	0.3%	0.0%	1.1%	0.0%
Total	100.0%	46.1%	100.0%	47.7%	100.0%	44.1%

For the avoidance of doubt, neither the Fund's sustainability indicators nor the Fund's performance on those indicators are subject to assurance by an auditor or review by a third party.

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

⁵ The figure shows the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are Sustainable Investments. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

⁶ Please note that the 'Portfolio Average Weight' and 'Average Revenue Exposure' figures provided for 2022 and 2023 in previous annual reports were misstated due an averaging error. The error resulted in the last five quarterly figures being averaged and reported, rather than the last four quarterly figures. The correct figures for 2022 and 2023 have been reported here but do not align with reports issued in relation to the Fund prior to this date. Please use the 2022 and 2023 figures provided for all analysis and comparisons in relation to these periods.

⁷ Please note that the Fund launched on 30 September 2021. The Fund's 2021 thematic alignment and revenue alignment figures are therefore provided as at 31 December 2021 and do not represent a quarterly average as do the Fund's 2022 and 2023 thematic alignment and revenue alignment figures.

The Investment Manager, in compliance with the principle of Do No Significant Harm (“DNSH”), assessed each company, primarily using third party data, on whether it had an adverse impact on the environment and society.

Companies with controversies that had severe adverse impacts on the environment and society were excluded from consideration as Sustainable Investments by the Investment Manager and were, therefore, excluded from the Fund.

The Investment Manager used research from third party providers to provide deeper insights into a company’s compliance with norms standards. However, given differing methodologies, tolerances and assessments of company behaviour, the Investment Manager retained discretion over the assessment of whether a company was involved in a severe controversy over the review period.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the DNSH assessment, consideration was given to the mandatory Principal Adverse Impacts (“PAI”) indicators provided in Table 1 (and where applicable, Tables 2 and 3) of the Annex 1 Level 2 Regulatory Technical Standards.

Over the reference period, the Investment Manager carried out a screening process during the construction of its eligible investment universe to exclude any companies that significantly harm environmental or social objectives due to their involvement in a range of controversial business activities. The Investment Manager used external ESG data providers as an initial input for the screen. In addition, the Fund employs an exclusion policy that excludes investment altogether in companies that operate in sectors that are deemed to have a negative impact on the environment or society.

In circumstances where data quality or availability was insufficient to make a reasonable judgement on a quantitative basis with respect to any of the mandatory PAI indicators provided in Table 1, and where applicable Tables 2 and 3, the Investment Manager, to the best of its ability, used proxy indicators, such as controversy cases or norms violations related to negative impacts on the relevant sustainability indicator, to assess harm caused by the company, and assessed the relevance and materiality of the principal adverse impact indicator to the company, using industry expertise and any data available.

Infineon commits to use 100% renewable electricity by 2025 and to become carbon neutral by 2030. Its carbon intensity trend is improving and lower than its sector average. Infineon announced the availability of comprehensive Product Carbon Footprint (PCF) data for customers, taking a pioneering role in the semiconductor industry. The company is committed to provide PCF data for its entire product portfolio, starting with about half of the portfolio. In the absence of established industry standards, Infineon has developed a methodology to calculate the Product Carbon Footprint, incorporating customer needs and best practices. Infineon includes emissions from raw materials, its own manufacturing processes, manufacturing partners and transportation to the customer (“from cradle to gate”). This means that the Product Carbon Footprint reported by

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Mobility Fund continued

Infineon covers scope 1 and 2 emissions as well as scope 3 emissions from suppliers and manufacturing partners, all the way to the customer's gate. It has put in place a comprehensive waste management strategy, focusing, in particular, on avoiding waste and preserving the value of the resources the company uses by adopting the principles of the circular economy. In FY24, Infineon was able to send 73% of non-hazardous and 78% of hazardous waste for reuse in recycling, resulting in an overall recycling rate of 76%.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager used third party ESG controversy and global norms data and research as a starting point for assessing alignment of portfolio companies with these global norms, and where necessary, conducting further due diligence to determine compliance with these norms.

To ensure that Sustainable Investments were aligned with the OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business and Human Rights, the Fund excluded companies deemed to have severe violations of the UNGC principles and OECD Guidelines using third party controversy research related to these global norms.

How did this financial product consider principal adverse impacts on sustainability factors?

As part of its do no significant harm assessment (“DNSH”) with respect to sustainable investments, the Investment Manager considered the mandatory Principal Adverse Impacts (PAI) indicators provided in Table 1 (and where applicable, Tables 2 and 3) of Annex 1 of the Regulatory Technical Standards.

Where material, the Investment Manager considered the following principal adverse impacts of a company on the environment and society in the manner described below.

Unless subject to an exclusion, either as a result of the application of the exclusions policy or as a result of the principle adverse impact indicating that the company causes significant harm to a sustainable investment objective, the Investment Manager sought to improve material adverse impacts of investee companies through active ownership activities such as engagement, voting or if necessary, divestment from the company within a reasonable timeframe, taking into consideration the best interests of the Fund and its Shareholders.

Factors considered when assessing a company’s impact on the environment included greenhouse (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity, energy consumption and/or production profile and carbon reduction initiatives. Revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. In accordance with the Fund’s exclusion criteria, companies involved in the exploration, production and distribution of oil, natural gas, coal, and the first generation of biofuels (derived from food

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

crops) are excluded. Furthermore, utilities with fossil fuel or nuclear power generation, as well as natural gas transmission and distribution utilities are also excluded.

Similarly, the Investment Manager considered biodiversity impact, water use and hazardous waste generated by a company, where deemed material.

The Investment Manager considered the board gender diversity and, where possible, gender pay gap of investee companies.

The Investment Manager considered the standards of the United Nations Global Compact (UNGC), and the Organisation for Economic Co-Operation and Development's (OECD) Guidelines for Multinational Enterprises. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident and decided the appropriate action of whether to monitor, enter enhanced engagement, or divest from the company. During the reference period, no investee companies were deemed to be in violation of the standards of the United Nations Global Compact, and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises.

The Investment Manager excluded any company involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance in relation to selected PAI indicators compared to the Fund's benchmark.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

⁸ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity and board gender diversity data as of 31 December 2024. Benchmark: MSCI ACWI Net TR Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €7.7 m as of 31 December 2024. The Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁹ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

What was the proportion of sustainability-related investments?

What was the asset allocation?

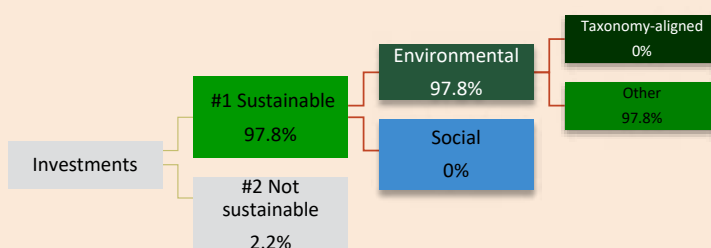

The Fund invests primarily in companies worldwide that support, through their technology solutions and services, the decarbonization and thereby electrification of the global energy sector.

All investments held by the Fund in equity participations were used to meet the Fund's sustainable investment objective.

During the reference period, the Fund averaged 97.8%¹⁰ in Sustainable Investments that met the Fund's sustainable investment objective, of which 100% contributed to environmental objectives.

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. '#1 Sustainable', 'Environmental' etc.)

Asset allocation describes the share of investments in specific assets.

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic Sector	% Assets ¹¹
Information Technology	44.2
Consumer Discretionary	26.3
Materials	13.1
Industrials	10.0
Communication Services	3.8
Cash and Cash equivalents	2.5

¹⁰ This is the percentage of the Fund's assets, including cash, on a portfolio weighted basis, that are Sustainable Investments. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

¹¹ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

Smart Mobility Fund continued

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

In accordance with the Fund’s exclusion criteria, investments in fossil fuel exploration and production companies, as well as in utilities with thermal fossil power generation, are prohibited and, therefore, the Fund did not have any exposure to fossil fuels over the review period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The proportion of investments of the Fund in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, was 0% over the reference period.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹²?

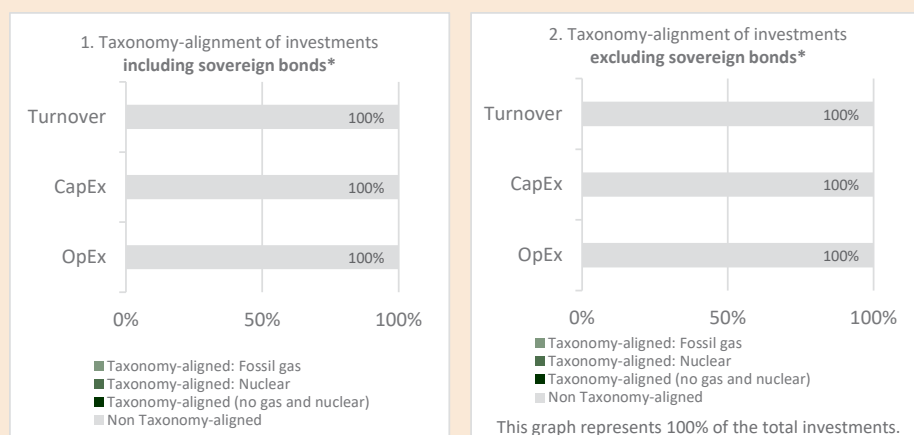

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The proportion of investments of the Fund in transitional and enabling activities, and aligned with the requirements of the Taxonomy Regulation, was 0% over the reference period.

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

During the previous reference period, the Fund was 0% aligned with the EU Taxonomy Regulation and during this reference period the Fund was 0% aligned with the EU Taxonomy Regulation.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

During the reference period, the Fund averaged 97.8% in Sustainable Investments that met the sustainable investment objective, of which 100% contributed to environmental objectives not aligned with the EU Taxonomy Regulation.

In order to satisfy itself that an investment is environmentally sustainable pursuant to the EU Taxonomy Regulation, the Investment Manager must (a) be satisfied that the investments underlying the Fund are in environmentally sustainable activities (b) identify the extent to which the investments of the Fund are in economic activities that qualify as environmentally sustainable and are aligned with the EU Taxonomy

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

Smart Mobility Fund continued

Regulation; (c) identify the proportion, as a percentage of the Fund's portfolio, of investments in environmentally sustainable activities which are aligned with the EU Taxonomy Regulation; and (d) identify the proportion, as a percentage of the Fund's portfolio, of enabling and transitional activities (as described in the EU Taxonomy Regulation).

At the present time, the Investment Manager cannot satisfy itself that the Fund's investments meet the criteria outlined above. Accordingly, the proportion of investments of the Fund in environmentally sustainable economic activities contributing to climate change mitigation, including in transitional and enabling activities, and aligned with the requirements of the EU Taxonomy Regulation is 0% of the Fund's net assets.

What was the share of socially sustainable investments?

The Fund will be invested in Sustainable Investments contributing to environmental objectives only. Therefore, the Fund's share of socially sustainable investments was 0% over the reference period.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund's investments identified as #2 Not Sustainable averaged 2.2% over the review period and consisted of cash held for liquidity purposes. There are no minimum environmental or social safeguards applicable to these investments.

What actions have been taken to attain the sustainable investment objective during the reference period?

Over the reference period, the Investment Manager maintained the Fund's eligible investment universe across four investment clusters: (i) Autonomous Driving; (ii) EV Manufacturing; (iii) EV Technologies; and (iv) Mobility Infrastructure. The alignment of a company with the four investment clusters was determined by its current or future revenue exposure to these clusters.

The Fund only invested in companies within the eligible investment universe and, therefore, all the companies in the portfolio passed the necessary minimum thematic threshold and did not breach the SFDR's principles of 'do no significant harm' and 'good corporate governance'.

The eligible investment universe maintained by the Investment Manager serves as a reference portfolio to the Fund, both in terms of financial performance and in terms of contribution to the sustainable investment objective. The Investment Manager reviewed the companies that qualify for the eligible investment universe on a periodic basis during the reference period and companies that were not aligned with the Fund's sustainable

investment objective, by virtue of not meeting the prescribed current or future revenue exposure threshold, not passing the DNSH assessment (including with reference to PAI indicators) or not having good governance practices, were excluded from the eligible investment universe. Further companies that participated in activities linked to the Fund's exclusion criteria were excluded from the eligible investment universe.

Similarly, additional new companies that met the previously mentioned criteria were added to the eligible investment universe. An example is the addition of Alphabet and Amazon.com to the universe and the Fund. Alphabet is a leading player in automotive software with the Android Automotive operating system, and also parent to the autonomous driving technology company Waymo, operating robotaxis in several cities in the USA. Amazon is developing its own autonomous vehicles, Zoox, to provide ride-hailing service. The companies are allocated to the autonomous driving cluster.

The Investment Manager did engage with an investee company involved in the production of rare earth products in 2022 where it felt that there was room for material sustainability improvement in addressing the environmental and social impacts of its activities over the reference period. The Investment Manager followed up with the company in 2024. The Investment Manager considers the dialogue to be satisfactory, and the company continues to make progress on ESG issues. This engagement is still ongoing. The Investment Manager's approach is dedicated and focused engagement to discuss material ESG issues that are relevant to the specific business case. The Investment Manager generally conducts 1-3 year direct engagement dialogues with selected companies where it deems necessary.

In addition, the Investment Manager participated in a collaborative engagement, organised by Spring, a PRI stewardship initiative for nature, with an investee company producing battery and energy storage solutions. The engagement focus is on biodiversity and supply chain management. It is the initial engagement dialogue with the company, and it is still ongoing.

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

UK Value Opportunities Fund

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Polar Capital Funds plc – UK Value Opportunities Fund (the “Fund”)

Legal entity identifier: 549300MWI6XYCECN5P80

Environmental and/or social characteristics

Sustainable investment

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes**

☐ It made **sustainable investments with an environmental objective**: ____%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ ☒ **No**

☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted environmental and social characteristics through the application of its investment strategy. Using the Investment Manager’s proprietary ESG analysis tool - the economic value-added sustainability scoring framework (“EVA SS Framework”) – the Fund seeks to take higher conviction positions in companies with positive scores against six categories: Carbon Emissions, Corporate Short Termism, Company Efficiency, Exposure to relevant ESG Regulation, Consumer Demand and Thematic Trends.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted by the Fund.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

UK Value Opportunities Fund continued

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The Fund used the EVA SS Framework to measure the attainment of the Fund's ESG characteristics against the six categories described.

The Fund saw a decline in the average overall EVA Sustainability Score from 7.6 to 7.4 from December 2023 to December 2024. This was driven by minor reductions in 3 categories, almost offset by an increase in the Fund's most important Carbon Emissions category.

Focusing on the Carbon Emissions category, which attracts the largest weight in the EVA SS Framework, the score improved from 7.9 to 8.2. This represents a significant improvement in the Carbon Emissions score from 11 companies in the Fund, slightly offset by compositional changes and a decrease in the score of just two companies. Compositional changes refer to new companies invested in throughout the year, on average, having a marginally lower Carbon Emissions score than those divested throughout the year. Given the Fund's track record with generating Carbon Emissions improvement, we are confident that these will improve over time. The two companies making a step backwards did so on the carbon delivery aspect rather than carbon targets.

The percentage of investee companies signed up to a Net Zero carbon emissions commitment of some form, moved from 78% to 90% between December 2023 and December 2024¹. The percentage of investee companies with no carbon emissions reduction targets dropped from 5% to 2%.

The Efficiency score declined 0.7 points as a result of compositional changes, with new investee companies having marginally lower scores than divested companies. The Efficiency score of those investee companies remaining in the Fund improved marginally over the year.

The Regulation score declined from 5.3 to 5.0 due to a worsening regulatory outlook in a number of sectors such as consumer food & beverage and asset management.

The Customer Demand score moved from 3.7 to 3.4 through a combination of marginally lower scoring companies being added to the Fund and marginal reductions in a handful of scores. Generally speaking, consumer demand for ESG friendly services has taken longer to come through than anticipated with value for money being a particularly strong driver.

The Thematic Trends and Corporate Short Termism scores were broadly flat over the year.

The Investment Manager focused on four key areas of engagement for investee companies during 2024. These focus areas were carbon emissions, the independence of the remuneration committee and audit committee (falling within the Short Termism category), board gender diversity (also falling within the Short

¹ These figures intend to cover commitments of all forms i.e. includes companies with scope 1&2 net zero emissions targets, scope 1&2 and selected scope 3 net zero targets, and full scope 3 targets.

Termism category) and waste reduction (falling within the Company Efficiency category).

Investee companies requiring focused engagement on the Carbon Emissions category reduced from 22% to 10% over the period. The percentage of investee companies without fully independent remuneration and audit committees remained at zero during the review period, while the percentage of investee companies with less than 33% women on the board was broadly stable at 15% and investee companies without waste reduction targets moved from 31% to 38% as more onerous criteria were introduced.

	Quarterly EVA Sustainability Scores ²				2024 EVA Sustainability Score Average ³
	Mar-24	Jun-24	Sep-24	Dec-24	
Carbon Score	7.8	7.9	8.2	8.2	8.0

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

⁴ These figures show the simple average of the Fund's quarterly EVA Sustainability Scores across each of the six categories. The Overall Score (EVA Sustainability Score) is the sum of the Fund's 2022 scores against each category which have been weighted in accordance with the EVA SS Framework. The Fund was approved by the Central Bank of Ireland as an Article 8 SFDR Fund on 11 April 2022 and therefore the Fund did not promote environmental or social characteristics, or measure its performance against the sustainability indicators, prior to this date.

⁵ These figures show the simple average of the Fund's quarterly EVA Sustainability Scores across each of the six categories. The Overall Score (EVA Sustainability Score) is the sum of the Fund's 2023 scores against each category which have been weighted in accordance with the EVA SS Framework. The Fund was approved by the Central Bank of Ireland as an Article 8 SFDR Fund on 11 April 2022 and therefore the Fund did not promote environmental or social characteristics, or measure its performance against the sustainability indicators, prior to this date.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors⁶?

When assessing a company’s impact on the environment, the Investment Manager considered greenhouse gas (“GHG”) emissions, including, but not limited to, indicators such as absolute emissions, carbon footprint, emissions intensity and carbon reduction initiatives.

Revenues of investee companies attributed to the fossil fuel sector were considered by the Investment Manager. The Investment Manager automatically excludes thermal coal producers. Further to this, where material revenues were flagged within the oil and gas sector, the Investment Manager assessed the company’s carbon reduction policies or targets related to achieving net zero.

The EVA Sustainability Score impacts: (i) stock selection; (ii) position sizing; and (iii) engagement and so the GHG emissions were considered over the reference period in the following ways:

- (i) With respect to stock selection, one company was exited in the year as a consequence of its performance on the Carbon Emissions category of the EVA SS Framework. Following engagement, Harbour Energy has fallen short of the credible Net Zero requirement for all oil and gas producers.
- (ii) With respect to position sizing, no shares were promoted or demoted on the basis of their performance in the Carbon Emissions category during the review period.
- (iii) With respect to engagement, the Investment Manager engaged 21 times with companies on their carbon targets and delivery. 12 of these were high priority engagements and these divided into five companies without Net Zero targets and seven companies with poor carbon reduction delivery. Much of the Investment Manager’s engagement on ESG matters in 2023 came into fruition in 2024. The Investment Manager made 19 engagements on carbon emissions in

⁶ Please note engagement examples may have begun before the formal adoption of consideration of principal adverse impacts of sustainability factors.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

UK Value Opportunities Fund continued

2023, of which seven were high priority involving companies with no carbon emissions reduction targets. Three of these engagements have subsequently been resolved, two have been sold on non-carbon ESG grounds and two remain outstanding. These two holdings are high priority for engagement for 2025.

Similarly, where water management was deemed material to an investee company by the Investment Manager, the Investment Manager encouraged the adoption of appropriate water management and water reduction policies.

The Investment Manager engaged with 22 investee companies in 2024 on their water management policies, encouraging the adoption of formal water usage reduction targets, and the percentage of investee companies with water usage reduction targets fell from 52% in December 2024 to 44% in December 2024 as more onerous criteria were introduced.

The Investment Manager considered the board gender diversity of investee companies, and, where it deemed appropriate, used its tools of active ownership to encourage better diversity practices. The Investment Manager engaged with six investee companies on female board diversity in 2024, of which five did not have at least 33% female board representation. Much of the Investment Manager's engagement in 2023 came into fruition in 2024, as the Investment Manager made seven engagements on gender diversity in 2023, of which five were high priority involving companies with less than 33% female representation on the board. AG Barr have subsequently met the required level. Of the remaining high priority shares, one has been sold and the others have made progress towards the target.

The percentage of investee companies with at least 33% of women on the board remained at 85% with material progress made by the remaining 15%.

The Investment Manager also took into account, as part of its process, the standards of the United Nations Global Compact, and the Organisation for Economic Co-Operation and Development's Guidelines for Multinational Enterprises. If a company was involved in severe controversies or norms violations, the Investment Manager assessed the severity of the incident to decide the appropriate action to take: whether to monitor, enter enhanced engagement, or divest from the company. Nine companies have been flagged as having potential controversies; none of which the Investment Manager deemed sufficient to warrant divestment. The investment Manager has engaged with all nine of these companies and will continue to monitor developments to the potential controversies.

The Investment Manager excluded any companies involved in the manufacture and sale of controversial weapons, such as cluster munitions and anti-personnel mines.

While the Fund considers principal adverse impacts on sustainability factors primarily at company level, the below table highlights the portfolio performance of selected PAI indicators compared to the Fund's benchmark.

Indicator ⁷		Fund	Fund Coverage	Benchmark	Benchmark Coverage	Relative % ⁸
GHG Emissions (TCO2e)	Scope 1	58,473.0	92.8%	45,063.7	93.9%	29.8%
	Scope 2	9,976.4	92.8%	10,493.9	93.9%	-4.9%
	Scope 1 & 2	68,449.4	92.8%	55,557.6	93.9%	23.2%

⁷ Source: MSCI ESG Ratings and Climate Change Metrics: GHG emissions, GHG emissions footprint and GHG intensity and board gender diversity data as of 31 December 2024. Benchmark: FTSE All-Share Total Return Index. The allocated emissions of investee companies are calculated using the companies' Enterprise Value Including Cash. Scope 1 and 2 GHG emissions are representative of the Fund's AUM of €922.1m as of 31 December 2024. The Fund and benchmark metrics have been grossed to 100% where coverage is not equal to 100% to provide a representative estimation of all portfolio investments emissions and for comparative purposes. Please note figures are provided for comparative and illustrative purposes only and should not be relied upon. Figures have not been independently audited by the Investment Manager and may be subject to quality, timing, consistency, availability and calculation issues. Data may be limited or distorted due to a lack of sustainability related regulations and reporting standards in the countries where investee companies are domiciled, the inconsistency of those regulations and reporting standards where applicable, or by companies' interpretations of those regulations and reporting standards or, in the case of GHG metrics, subject to adjustment as a result of changes in calculation methodology or improved data availability.

⁸ The figures shown demonstrate the difference in performance of the Fund and the benchmark on each metric based on 100% data coverage (whether achieved or estimated).

⁹ Excluding cash within top 15 largest investments.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

UK Value Opportunities Fund continued

What was the proportion of sustainability-related investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

What was the asset allocation?

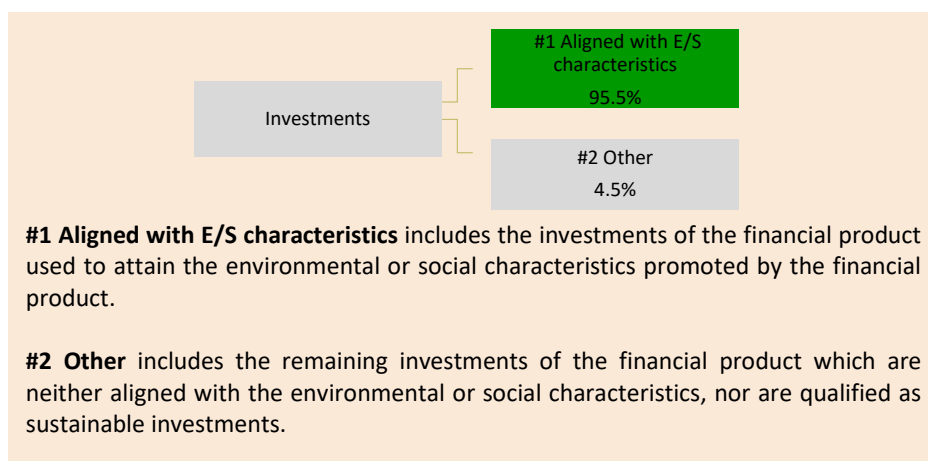

Asset allocation describes the share of investments in specific assets.

The Fund primarily invested in a diversified portfolio of UK listed companies. The Investment Manager used the EVA SS Framework to assess the environmental and/or social characteristics of each investee company.

100% of the companies the Fund invested in were assessed under the Investment Manager's EVA SS Framework, which was used to assess and deliver the environmental or social characteristics promoted by the Fund.

During the reference period, an average of 95.5% of investments of the Fund were used to meet the environmental and social characteristics promoted by the Fund.¹⁰

Please note that figures given in the asset allocation section below indicate the percentage allocation of the fund to each category (e.g. ' #1 Aligned with E/S characteristics' etc.)

¹⁰The figure shows the average percentage of the Fund's assets, including cash, on a portfolio weighted basis, aligned with the Fund's characteristics as a result of passing the minimum criteria for investment set out in the EVA SS Framework. The average is calculated as a simple average of the Fund's quarterly portfolio weighted alignment as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

● **In which economic sectors were the investments made?**

Economic Sectors	% Assets ¹¹
Financials	26.4
Industrials	19.7
Materials	13.0
Consumer Staples	12.5
Real Estate	6.8
Consumer Discretionary	6.7
Health Care	5.0
Cash and Cash equivalents	3.8
Communication Services	3.1
Energy	2.0
Information Technology	1.1

Tobacco and thermal coal producers were automatically excluded from the Fund. The Investment Manager did not automatically exclude oil producers where the company had made a credible commitment to align with the Paris Agreement and had initiated the transition away from oil production. During the reference period, the Fund held the following companies that had exposure to fossil fuel related activities:

Shell: The company has made material improvements to its Net Zero plan in recent years and has interim and long-term carbon reduction targets for Scope 1, 2 and 3.

BP: While BP had a credible Net Zero emissions strategy, it fell down in 2024 on our Corporate Short Termism metric. This includes an assessment of a focus on short term profits which can lead to poor corporate behaviour. One of the assessments is a quantitative assessment called the safety check – a proprietary metric determining the retained cash flow in a business relative to its debt levels. Given a deterioration in the refining margins throughout the year, BP failed the safety check and was exited in full.

Serica: While Serica has a credible Net Zero emissions strategy, it fell down in 2024 on our Regulation metric. The Investment Manager assessed that the incoming Labour government would raise the tax level on UK oil and gas producers which they duly did. The company was exited ahead of the election on this basis.

Harbour: Harbour has a target of Net Zero Scope 1 and 2 emissions by 2035. While the company has a long-term target plan to reach net zero on Scope 3, company engagement suggests that this is via carbon capture rather than transition to renewables. Progress on carbon capture schemes has been slower than the Investment Manager had anticipated owing to their cost. It has also taken longer than the Investment Manager had expected for Harbour to include Wintershall assets into their Net Zero plans and the ability to do so is more constrained than the Investment Manager had realised owing to third party operators. Taking this in

¹¹ This shows the percentage of the Fund's assets within each economic sector as at 31 December 2024.

Appendix III – Sustainable Finance Disclosure Regulation
(unaudited) continued

UK Value Opportunities Fund continued

the round, the Investment Manager believes that Harbour currently falls short of the credible Net Zero requirement and the position was exited in full.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

Did the financial product invest in fossil gas and / or nuclear energy related activities that comply with the EU Taxonomy¹²?

Yes:

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

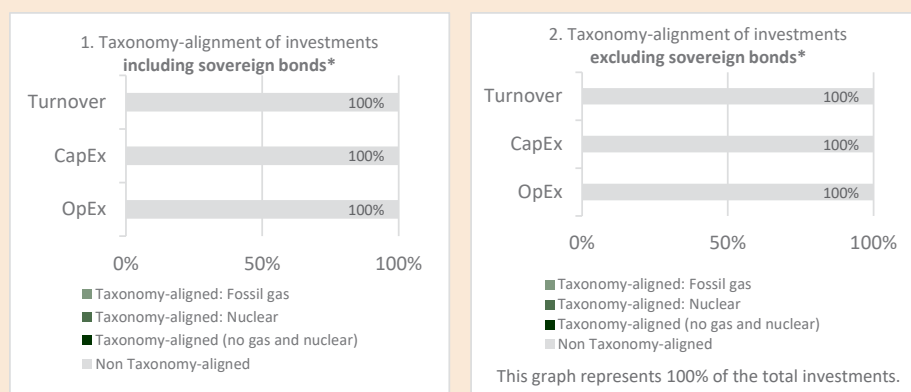

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanation note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

**For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures*

● What was the share of investments made in transitional and enabling activities?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

● How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund does not invest in environmentally sustainable activities, transitional activities or enabling activities defined as such by the EU Taxonomy Regulation.

What was the share of socially sustainable investments?

The Fund does not invest in Sustainable Investments as defined under Article 2 (17) of the SFDR.

Appendix III – Sustainable Finance Disclosure Regulation (unaudited) continued

UK Value Opportunities Fund continued

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund held an average of 5.0% of investments identified as #2 Other over the reference period ¹³. The majority of these investments were held in cash or derivative instruments in line with the Fund’s investment policy. There were no minimum environmental or social safeguards applicable to these holdings.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund approach is to take ESG issues into consideration through integration into the investment process. The proprietary EVA Sustainability Score integrates the risks and opportunities of ESG factors into the Investment Manager’s EVA SS framework. Each company in the portfolio was assessed and scored on its approach to six ESG topics; Carbon Emissions, Corporate Short Termism, Company Efficiency, exposure to relevant ESG Regulation, Customer Demand and Thematic Trends.

Within the EVA SS Framework, the cost of capital is an extremely powerful force, and the Investment Manager believes that carbon emissions policies will increasingly affect the cost of capital. As such, the level of carbon emissions is the single most important ESG factor attracting the highest weighting in the Investment Manager’s EVA Sustainability Score.

Further climate change risks and opportunities are captured within the other five factors. Waste, water and plastic reduction polices are assessed with the Company Efficiency factor. The possibility of climate related taxes, bans or quotas are assessed with the exposure to relevant ESG Regulation factor. Environmental considerations are included within the Investment Manager’s assessment of changes in Consumer Demand. The opportunities emerging from the transition economy are captured within the Thematic Trends category.

With respect to Carbon Emissions, companies are scored on their emissions policies. The scoring is consistent with the Investment Manager’s ambition that investee companies will reach net zero emissions by 2050 or sooner.

Over the period, the EVA Sustainability Score may have impacted: (i) stock selection; (ii) position sizing; and (iii) engagement, with examples provided below:

- (i) **Stock Selection:** Harbour was exited as a result of failed engagement on the Investment Manager’s Carbon Emissions category. The investee company fell short of the credible Net Zero strategy requirement. BP was exited as a result of it failing the Corporate Short Termism factor. The investee company failed our safety check, a quantitative assessment of debt levels, which could lead to a focus on short term profits and poor corporate behaviour. Additionally, several

¹³ This figure shows the average percentage of the Fund’s assets, including cash, on a portfolio weighted basis, categorised as ‘Other’ investments. The average is calculated as a simple average of the Fund’s quarterly portfolio weighted ‘Other’ investments as at each calendar quarter end (i.e. 31 March, 30 June, 30 September and 31 December).

shares have not been bought despite appearing on our watchlist, including BHP and Drax (on the basis of their Carbon Emissions score), Plus 500 and Playtech (on the basis of their Corporate Short-Termism score) and Imperial Tobacco (on the basis of its Thematic Trends score).

- (ii) **Stock weightings:** Rio Tinto shifted division, from the lower conviction group to the higher conviction group, as its EVA SS score rose above five.
- (iii) **Engagement:** The Investment Manager has written bespoke individual letters to investee companies this year in support of its ESG agenda on each of the six factors: Carbon Emissions Corporate, Short Termism, Company Efficiency, Exposure to relevant ESG Regulation, Customer Demand and Thematic Trends, of which Carbon Emissions received a particular focus.

Company specific feedback is given within every topic, including areas for improvement and areas of success. The Investment Manager is currently focusing on decarbonisation, board independence, female representation, executive remuneration and waste reduction. In 2024, the Investment Manager made 21 engagements on carbon, six on female representation, 22 on waste, two on board independence, 17 on other topics and nine on human rights/controversies. The Investment Manager had success during the review period with Beazley introducing a Net Zero target, Mitie confirming that absolute carbon reduction is occurring, Rio Tinto assuring the Investment Manager of 43% female representation on the Board and Renew Holdings posting its Human Rights Policy on its website.

The Investment Manager's proprietary ESG tool monitors outstanding engagements with a high priority status. Meaningful change takes time to achieve, and a number of key successes relate to engagements in the prior year. The Investment Manager had three cases of improved carbon targets following engagement (3i, Rank and Atalaya), one case of improved female representation following engagement (A.G. Barr), two cases of the improvements in waste management following engagement (Rank and Shell), one case of resolution on board independence (Serica), and a range of improvements on other topics including plastics (Premier Foods and Shell), health and safety rates (GlaxoSmithKline), water reduction (Dunelm), corporate short termism (Beazley) and better health and safety (Anglo American).

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● **How does the reference benchmark differ from a broad market index?**

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
